The chairman found that the price paid for pitch pillar work at the Cadomin mine in the same neighbourhood, which is 70 cents per ton of 2,240 pounds, should govern pitch pillar work at the Luscar Collieries. With regard to entry or flat pillar work the chairman found that an increase of ten cents a ton, or 80 cents per ton of 2,240 pounds, would be a fair allowance. The operators intimated that in certain parts of the flat pillar work chutes would be put in, thus eliminating shovelling. Where this is done the increase of 10 cents a ton for shovelling would not apply.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING AUGUST, 1923

THE British *Ministry of Labour Gazette* for September contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland during August, 1923, based upon returns from employers and workpeople.

### NUMBER, MAGNITUDE AND DURATION.

— The number of trade disputes involving a stoppage of work, reported to the Department as beginning in August in Great Britain and Northern Ireland, was 45, as compared with 37 in the previous month and 32 in August, 1922. In these new disputes, approximately 6,700 workpeople were directly involved, and 2,300 indirectly involved (i.e. thrown out of work at the establishments where the disputes occurred though not themselves parties

to the disputes). In addition, about 59,000 workpeople were involved, either directly or indirectly in 28 disputes which began before August, and were still in progress at the beginning of that month. The number of new and old disputes was thus 73, involving approximately 68,000 workpeople, and resulting in a loss during August of about 1,200,000 working days. The dispute involving members of the United Society of Boilermakers and Iron and Steel Shipbuilders in federated shipyards, which began on April 30, continued throughout August. The strike of dock workers which began in July and was still in progress in London at the beginning of August, was settled on August 20. A settlement was also effected in the case of the protracted dispute in the Dundee jute industry.

**CAUSES.** — Of the 45 disputes beginning in August, 11, directly involving 1,500 workpeople, arose from proposed reductions in wages; 17, directly involving 1,400 workpeople, from other wages questions; 7, directly involving 600 workpeople, from questions respecting the employment of particular classes or persons; 4, directly involving 2,100 workpeople, from questions of unionism and non-unionism; and 6, directly involving 1,100 workpeople, from other questions.

**RESULTS.** — Settlement were effected during August in the case of 23 new disputes, directly involving 4,000 workpeople, and 14 old disputes, directly involving 23,000 workpeople. Of these new and old disputes, 11, directly involving 3,000 workpeople, were settled in favour of the workpeople; 12, directly involving 19,000 workpeople, were settled in favour of the employers; and 19, directly involving 5,000 workpeople, were compromised. In the case of 4 disputes, directly involving 300 work-

people, work was resumed pending negotiations.

The following table analyses the disputes in progress in August by groups of industries:—

Groups of Industries	Number of disputes in progress in August			Number of workpeople involved in all disputes in progress in August	Aggregate duration in working days of all disputes in progress in August
	Started before August 1	Started in August	Total		
Building .....	5	5	10	1,000	16,000
Mining and quarrying .....	2	7	9	8,000	80,000
Metal, engineering and shipbuilding .....	7	6	13	87,000	856,000
Textile .....	1	5	6	1,000	14,000
Transport .....	2	6	8	19,000	214,000
Other trades.....	11	16	27	2,000	20,000
Total, Aug., 1923.	28	45	73	68,000	1,200,000
Total, July, 1923..	37	37	74	95,000	1,665,000
Total, Aug., 1922.	35	32	67	31,000	312,000

## CONVENTION OF THE TRADES AND LABOUR CONGRESS OF CANADA

### Synopsis of the Proceedings of the 39th Annual Meeting.

**T**HE 39th annual convention of the Trades and Labour Congress of Canada was held in Vancouver from September 10 to 14, the sessions being held in the ball room of the Vancouver Hotel. At the opening session the delegates were welcomed on behalf of organized labour by Mr. H. E. Neelands, M.L.A., president of the Vancouver Trades and Labour Council, the welcome of the municipality being tendered by Mayor C. E. Tisdall. The Hon. A. M. Manson, provincial attorney-general and minister of labour, who was prevented from being present at the opening of the convention, at a subsequent session delivered an address of welcome on behalf of British Columbia. To the ad-

resses of welcome Mr. Tom Moore, president of the congress, made suitable replies.

Upon conclusion of the opening formalities, the first order of business was the report of the Credential Committee, the final report of which showed that credentials had been received for 220 delegates; 42 of whom represented international labour organization which had affiliated the whole of their Canadian membership with the congress; 16 represented trades and labour councils, 10 represented a provincial federation of labour, 158 represented local branch unions and three were fraternal delegates, representing respectively the British Trades Union Congress, the Inter-

national Federation of Trade Unions and the American Federation of Labour.

Following the appointment of the customary committees, the associate secretary and the translator, the executive council submitted the following for the attention of the convention.

Your Executive has noted and carefully watched developments of the recent bringing to Canada from Great Britain of workers for the western harvest field and considering that the situation is one which calls for a united protest recommends that this convention forward the following telegram to the Prime Minister of Canada and the Minister of Immigration at Ottawa:

It having been authoritatively stated that approximately twelve thousand men have been induced to come to Canada for work in the western harvest fields, many of whom have been found physically unfit for such laborious work; numbers of these being unable to secure employment under promised conditions are already drifting into the western cities with the likelihood of their becoming public charges on these municipalities. The Trades and Labour Congress of Canada, in convention assembled, protest strongly against wholesale migration of this nature, undertaken without any preparation to ensure reasonable opportunity of employment during the coming winter months, and demands that the Federal Government accept the responsibility of returning those unemployed workers to their homes or provide them with the means of sustenance until employment can be secured by them.

The delegates adopted this recommendation of the executive council.

#### Report of Executive Council

The members of the executive council reported that during the past year the policies of the congress had been closely followed and that the numerous matters coming within the scope of their activities had been pressed to the fullest extent. The following is a summary of the report as submitted:

(1) *Legislative Programme, 1923.* — On January 22 the executive presented to the Dominion Government the programme of desired legislation, which contained 25 items, some of the subjects dealt with being (a) Unemployment, (b) Immigration, (c) Criminal Code Amendments, (d) Industrial Disputes Act, (e) Support of League of Nations and International Labour Organization,

(f) Election Act Amendments, (g) Old Age Pensions, (h) Amendments to Naturalization Act, (i) Public Ownership and Natural Resources, (j) Fair Wage Policy, (k) Disarmament, (l) Tariff Commission, (m) Abolition of the Senate as a non-elective body, (n) Insuring for all workers the right to organize.

(2) *Legislation.* — Under this caption the executive gave an account of the bills passed at the last session of the Dominion Parliament as well as of certain bills which failed of adoption, among which were (a) Amendments to the Industrial Disputes Investigation Act, (b) Canadian National Railways Construction, (c) Cold Storage Act, (d) Criminal Code Amendments, (e) Proportional Representation. In reviewing the result of the last session of Parliament the executive called attention to the refusal of the Senate to adopt certain bills which had been passed by the House of Commons. Mention was made of the items in the legislative programme of the congress which had been passed into law, including (a) Restricting Chinese immigration, (b) Amendments to the Naturalization Act, (c) The Copyright Act, and (d) the restoring to Parliament of the control of certain coal leases in Alberta. Report was made that the Marking Act had been brought into effect so far as printed matter was concerned, and partial steps taken to comply with the request for amendments to the Shipping Act. It was also reported that to give effect to the requests relating to the International Labour Organization a conference of provincial representatives was being called by the Minister of Labour for September 24. The right to organize, the executive stated, had been brought to the attention of the House of Commons through the dismissal of certain employees for union activity. It was reported that "though no legislative action was taken on the matter, the definite declarations of the Prime Minister and the Minister of Labour should remove any doubt in the minds of employers as to the inadvisability of in-

terfering with this right of the workers”.

(3.) *Affiliations and Advisory Councils.* — On this subject the executive council reported that affiliation had been maintained with the International Federation of Trade Unions, the International Federation of Working Women and the Canadian Council on Child Welfare; also that affiliation had been completed with the League of Nations Society in Canada, and that representatives of the congress had attended meetings of the International Labour Organization, Dominion Council of Health, Canadian Council of Education, Dominion Fire Prevention Association, Ontario Fire Prevention League and Employment Service Council of Canada. The president, with the approval of the executive council, had accepted membership in the Eyesight Conservation Council of Canada, National Safety League, the Frontier College and on the general administrative council of the American Association for Labour Legislation. A synopsis of the work which had engaged the attention of some of the above mentioned organizations was also presented.

(4.) *International.* — Under this heading the council reported that relations with the American Federation of Labour and the international labour bodies connected therewith had been most cordial. President Moore had attended the fourth annual conference of the International Labour Office as representative of the Canadian workers, Mr. John W. Bruce, of Toronto, attending as adviser. Report was given of the subjects dealt with, and the text of the proposed amendments to Article 393 of the Treaty of Peace creating the International Labour Office, also of the recommendations and resolutions adopted by the conference. Reference was made to the activities of the International Federation of Trade Unions which, it was stated, had continued to be an effective means of co-operation between the organized workers of the various countries in affiliation with it. During the year the congress had given

all possible assistance to the International Federation of Working Women.

(5.) *Canadian National Railway Directorate.* — In this section reference was made to the appointment of President Moore to the board of directors of the Canadian National Railways.

(6.) *Canadian Congress Journal.* — Under this caption the executive reported on the position of the official journal, pointing out that notwithstanding numerous appeals for support, the publication was unable to pay its way, and stated that it was futile to continue the journal unless a fund was immediately raised by voluntary subscriptions or otherwise large enough to defray the deficit already incurred and provide a surplus large enough to meet any loss on publication for the ensuing year.

(7.) *Militia Act Amendments.* — In this section of the report the executive council stated “The necessity for securing amendments to the Militia Act was made very apparent during the recent strike of the steel workers in Cape Breton”, and after quoting the sections of the act pertaining to the calling out of troops to aid the civil authorities said:

It is the opinion of your executive that amendments should be sought to the Militia Act whereby the only authorities who could make requisition for the calling out of the militia in aid of the civil power should be either the municipal council of the district wherein riot may occur or be anticipated, or the Government of a province, and that in either case those making the requisition should be absolutely responsible for the cost of such military aid.

We further believe that the Federal Government should be given discretionary powers as to their compliance with such a requisition even when made by a municipality or a provincial Government. In this way direct responsibility would be fixed upon upon those answerable to the electors for their action.

(8.) *Apprenticeship.* — Concerning this question the executive council reported that apprentices in the skilled trades had practically disappeared, and stated that the Association of Canadian Building and Construction Industries in co-operation with a committee of representatives of building trades unions had

taken steps to remedy the deficiency by a proposed Apprenticeship Act. The main purpose of this proposed law is to create a central fund to which all building trades employers will contribute, and from which apprentices to the building trades will be paid a weekly wage during the period set aside for their technical training.

(9.) *War Against War.* — Dealing with this matter the council referred to the call last autumn from the British Government for a statement by the Canadian Government as to what assistance could be expected if an amicable settlement of the Turkish question could not be secured, and mentioned the public announcement of the Prime Minister that should necessity arise for Canada to consider sending armed assistance to Great Britain the matter would first be placed before a special session of Parliament. Following this declaration the president of the congress made the following statement:

The Government's decision to obtain the sanction of Parliament before committing Canada to a policy of war is one with which we concur. The time has passed when this country should be swept into war on the declaration of any single individual or the Cabinet without full investigation of the causes by Parliament.

The executive council also reported that a number of resolutions had been received from affiliated bodies urging some further action to emphasize the antipathy of the Canadian workers against war as a means of settling international disputes. The council had given endorsement to the International Federation of Trade Unions in its propaganda against war in all countries and had issued an appeal to all affiliated bodies to support this anti-war campaign. The council strongly recommended continued support to the movement for universal peace.

(10.) *Peaceful Picketing and Injunctions.* — Referring to recent legal decisions regarding picketing during strikes and injunctions issued in connection therewith, the executive council stated:

It is apparent from these and other past cases that the efforts of organized labour must be continued to have the law of Canada brought into harmony with that of Great Britain so as to again restore protection to workers against the uncertainty and interference of the courts in peacefully conducted labour disputes.

(11) *Immigration and Emigration.*—

The executive had co-operated with a committee of representatives of the building trades to prevent building trades mechanics being brought into the country, the opposition being based on the knowledge that there was no reasonable chance of steady employment for such workers. Attention was also called to the British workers recently brought to Canada as harvest help. This effort to increase our population, the executive stated, will fail of its purpose and create further dissatisfaction and discontent which will react to the future detriment of the country. Referring to Oriental immigration the report stated that the reiterated demands of organized labour for exclusion of Asiatics had been partly met by legislation at the last session of Parliament, and that the Government should be complimented for enacting the measure.

(12.) *One Day's Rest in Seven.* —

The principle of one day's rest in seven, the executive council reported, had been incorporated as one of the basic rights of the workers in the Treaty of Versailles, and recommendations had been sent by the International Labour Office to the Governments of the countries, members thereof, urging upon them the necessity of guaranteeing this right to all workers. The executive recommended that, as no action had been taken by the Government of Canada to give effect to this international decree, the incoming executive council continue to press upon the Federal Government the necessity of either amending the Lord's Day Act so as to make the same effective in giving to the workers one day's rest in seven or enacting new legislation to bring about the desired result.

(13.) *Studholme Memorial.* — In accordance with instructions of previous

conventions, the council had erected in the new labour temple in Hamilton a bronze tablet, suitably inscribed to the memory of the late Adam Studholme, who was the only labour representative in the Ontario Legislature during his period of service.

(14.) *Old Age Pensions.* — In reporting on this subject the executive stated that "Canada remains amongst the few industrial countries that have not yet made provision for the protection of its aged workers". Having made a survey of a number of old age pension acts of other countries, together with a review of the conditions existing in Canada, the executive submitted a number of suggestions in regard to the operation of an old age pension law.

(15.) The concluding section of the report of the executive council referred to a number of matters which had engaged their attention during the year, included in which was mention of the efforts made to secure observance of the fair wage regulations on the Welland Ship Canal.

#### **Report of Provincial Executive Committees and Federations of Labour**

In accordance with the instructions of the 1922 convention, the executive council submitted a uniform synopsis of the legislative work of the provincial executive committees and provincial federations of labour, there being two of the latter, their respective jurisdictions being the provinces of New Brunswick and Alberta. The provinces having executive committees are Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia. The reports from each provincial body gave an account of the legislative demands which had been presented and showed how far the requests had been complied with by the respective legislatures.

The council also submitted a report from Mr. John W. Bruce, of Toronto, the fraternal delegate to the 1922 convention of the British Trade Union Congress.

#### **Report of Committee on Officers' Reports**

All of the above mentioned reports were referred to the Committee on Officers' Reports, which expressing concurrence in the work of the executive made a number of recommendations. On section (1) (Legislative Programme) the committee recommended that the executive council continue its efforts to have the will of the congress carried out in regard to unemployment and immigration and other important matters.

Reporting on section (2) (Legislation) the committee stated in regard to the amendments to the Shipping Act that they did not meet the provisions of the draft convention of the International Labour Office, and recommended that the executive council press for the adoption of the said draft convention; also that the executive council be instructed to continue their efforts to obtain the amendments to the Shipping Act requested by the National Association of Marine Engineers of Canada.

Dealing with inland revenue, custom and tariff, the committee strongly condemned the increased taxation represented in the increase in the sales tax of  $4\frac{1}{2}$  to 6 per cent, and recommended that the executive council be instructed to press for the abolition of the sales tax.

Reporting on the reference to immigration the committee regretted that through the action of the Senate the efforts to prevent the deportation of British subjects was not successful, and recommended that efforts be continued to obtain the necessary amendments to the Immigration Act to protect British subjects. The committee further recommended that, in addition to the endorsement of the policy adopted regarding the admission of Asiatics, the executive council endeavour to obtain the right enforcement of all regulations governing the residence of Asiatics in Canada, particularly as they apply to licenses granted to Asiatics working in the mining industry.

In regard to the amendments to the Industrial Disputes Investigation Act, the committee expressed regret at the action of the Senate in not agreeing to the proposed changes, and recommended that the executive council continue to urge the amendments as sought by the congress. The committee also expressed satisfaction at the action of the House of Commons in rejecting the Senate amendment substituting the judiciary for the Minister of Labour as the authority to appoint the chairmen of boards constituted under the act where the representatives of the parties concerned failed to agree on a chairman.

In reporting on the section in reference to Canadian National Railway construction the committee recommended the condemnation of the Senate in refusing to sanction expenditures for necessary extensions of the National Railways. The committee also recommended condemnation of the Senate for its refusal to ratify the action of the House of Commons in regard to the Cold Storage Act. The committee further recommended that the suggested "reform" of the Senate as contained in the report of the executive council should be changed to read the "abolition" of the Senate in conformity with the platform of principles of the Congress.

The committee expressed satisfaction (1) with the arrangements for a conference of provincial representatives in Ottawa to consider the question of giving effect to the requests of the congress relating to the International Labour Office; and (2) with the declarations of the Prime Minister and the Minister of Labour regarding the right of workers to organize; and recommended in this connection that the executive council co-operate with bodies connected with the congress in their efforts to prevent the planning of town sites where corporations have complete control of the activities and property interests of the workers.

The committee expressed satisfaction with the affiliations of the congress as reported by the executive council, and

recommended the abolition of all employment agencies other than the Government employment bureaus.

The committee also expressed satisfaction with the appointment of President Tom Moore to the directorate of the Canadian National Railways and recommended that an appeal be made for financial assistance for the official journal of the congress.

The committee commended the work of the provincial executive committees and provincial federation in their efforts to secure legislation and also the report of the fraternal delegate to the British Trade Union Congress.

Some discussion took place on the report of the committee, the items most keenly debated being (1) the affiliation of the congress with the League of Nations Society, (2) the position of the official journal and the means of improving its financial condition, and (3) section 9 under the caption "War against War". The whole report and recommendations of the committee were finally adopted without amendment.

#### Report of Secretary-Treasurer

The secretary-treasurer of the congress reported that the total receipts from all sources for the fiscal year ended August 15, 1923, were \$26,471.97; the expenditures for the same period were \$22,288.77, leaving a balance on hand of \$4,183.20. The total affiliated membership at the close of the year was 121,842. Since the opening of the congress the International Ladies' Garment Workers' Union had affiliated its Canadian membership of 1,002. The secretary-treasurer also read the report of the trustees of the congress headquarters in Ottawa. The receipts for the year were \$1,740 and the cost of equipment and maintenance was \$1,696.41, leaving a balance of \$43.59. The Audit Committee, to which these reports were referred, subsequently reported that the accounts were found correct. The report was adopted.

The report of the Ways and Means Committee which was approved, recommended payment of \$900 to the fra-

ternal delegate to the British Trade Union Congress and \$600 to the delegate to the American Federation of Labour; and also recommended referring to the executive council the payment of certain incidental convention expenses.

#### Constitution and Law

Two resolutions were referred to the Committee on Constitution and Law. One of these sought to have the annual conventions of the congress held within the radius of Winnipeg and Quebec cities, with a view of lessening the expense of sending delegates. The other had for its object the pooling of railroad fares of delegates attending the annual conventions. The committee reported against both proposals and the convention concurred.

#### Union Label Committee

Three resolutions were referred to the Union Label Committee. Favourable consideration was recommended to a request that the executive council of the congress consider ways and means of encouraging the sale and purchase of union label goods by the production and distribution of printed matter in different languages supporting the use of the union label in such industries and sections of the country as would be most likely to produce results.

The committee reported against a resolution proposing the adoption of a universal label.

The third resolution requested that the congress compile certain information concerning union label products. This, the committee pointed out, could be procured from the Union Label Trades Department of the A. F. of L. and therefore recommended non-concurrence. The committee further reported as follows:

(1) Having seriously considered the apathy on the part of the organized workers and their immediate families towards the purchasing of union label products, we recommend that the delegates, upon their return to their respective localities, endeavour to educate the general movement as to the value of spending their wages on products bearing the union label and in shops display-

ing shop cards and working buttons and we further recommend that the delegates impress upon the various organizations represented the value of union label propaganda by encouraging the formation of label leagues or label committees in their central bodies and in building or metal trades councils.

(2) For a number of years the various organizations using label or shop cards have endeavoured to protect these label or shop cards through legislation and have not, as yet, met with any degree of success. We therefore recommend that the incoming Executive continue their efforts to the end that adequate legislation may be enacted protecting all such labels and shop cards.

(3) Your committee recommends that this congress reaffirm its action in support of the cigarmakers' union as adopted at the Windsor convention.

(4) The drive on the part of the employers to destroy the power of union labour and union labels has had a severe effect upon the allied printing trades boot and shoe workers, garment workers, tailors, cigarmakers, hatters, hotel and restaurant employees, barbers and bakers, and we urge upon the delegates to this convention to give all necessary assistance in the rehabilitation of these and other organizations and assist in promoting greater demand for the labels and cards of the various organizations.

(5) The attention of the Toronto delegates is especially called to the fact that the organized barbers of that city are practically out of business, due to the inconsistency of the majority of trade unionists and their persistence in patronizing non-union barber shops, one of them at the very door of the Labour Temple.

The committee appealed to the delegates and through the delegates to all organized workers for a more generous and sympathetic support for all union labels, shop cards and working buttons.

The report of the committee was adopted.

#### Resolutions Submitted

There were referred to the Committee on Resolutions 74 resolutions which had been submitted in accordance with the rules of the congress. The committee reported that a number of other resolutions had been received within the period set for their acceptance, the subjects of which were made known to the delegates. As the purposes of these resolutions, with one exception, were covered by regularly submitted resolutions, the committee reported against their acceptance, and the convention concurred.

In several instances the committee amalgamated certain resolutions dealing with the same subject and in others submitted substitute resolutions. The first resolution reported upon by the committee was one requesting that the Ontario Provincial Government be petitioned to amend the Workmen's Compensation Act so that all workers, irrespective of by whom employed, be allowed the benefits of the law. This resolution was adopted as was also one requesting that the Quebec Provincial Government be urged to adopt a compensation act similar to the compensation laws in force in other provinces.

#### Health and Safety

Under this heading thirteen resolutions were submitted, two of which were not considered, being covered by other resolutions. The resolutions adopted were:

(1) In favour of the appointment of more boiler inspectors and the proper enforcement of the law governing boiler inspection.

(2) In favour of legislation providing for the systematic and periodical inspection of all locomotive boilers by Government inspectors.

(3) In favour of the proper enforcement of the provisions of the Ontario Factory Act in the planing mills, wood-working plants and other factories.

(4) Asking for the discontinuance of the use of spraying machines in the painting and varnishing of walls, etc., on the ground that their use is injurious to the health of the operators.

(5) In favour of legislation requiring a motorman and conductor on all trolley passenger cars.

(6) In favour of government insurance against sickness.

(7) In favour of asking for legislation requiring the removal of all wall paper and washing off of all kalsomine or other water coloring before redecorating any building.

(8) In favour of the total exclusion of all Orientals and that demand be made for legislation which will more ef-

fectively control the activities of Orientals already in Canada.

(9) In favour of regulations compelling the periodical medical examination of all persons employed or engaged in the preparation of food for public consumption.

(10) In favour of legislation sought by the barbers for the licensing of the craft.

Another resolution adopted stated that many accidents were attributable to workmen not understanding the English language and requested that the British Columbia Government be asked to set an examination in English for all workers whose mother tongue is other than the English language, and that penalties be imposed on employers engaging such foreigners to work in any plant where steam, gas, water or electricity is used as motive power.

#### Fair Wages

Four resolutions dealing with the working conditions of men employed on the Welland Ship Canal were introduced. The Committee on Resolutions reported concurrence in one of these (No. 23), dealing specifically with the carpenters employed on the work. A motion was made and adopted that the resolution be referred back to the committee to prepare one covering all resolutions submitted on the subject. Subsequently the committee reported, again recommending resolution No. 23 with an amendment making the grievances complained of apply to all trades; and also providing that the executive of the congress present to the Government as early as possible the complaints of the workmen as set forth in the resolution and that the fair wage law be enforced as from June 1, 1923, and back pay from that date be collected by the Government from the contractors and paid direct to the workmen immediately; the resolution further asked that the executive of the congress request the Government that the fair wage law be amended so as to provide a penalty for the improper removal of fair wage schedules authorized by the Depart-

ment of Labour. After speeches had been made by several delegates from unions whose members were employed on the Welland Canal the resolution as submitted by the Resolutions Committee was adopted.

The convention adopted a resolution in favour of requesting that the Ontario Government pass fair wage legislation similar to that adopted by the Federal Government, and in the meantime that the fair wage resolution passed in 1900 be put into effect.

Three resolutions were submitted concerning the payment of fair wages to workmen employed on public works undertaken by the Quebec Government. The one adopted as covering the grievances complained of also asked for the passage by the Legislature of a fair wage law similar to that adopted by the Federal Government.

A resolution was also adopted requesting that the Federal Government insert a wage clause in future contracts awarded by the Canadian National Railways for rolling stock and equipment.

#### Militarism and War

Four resolutions were submitted under this caption. One of these favoured the formation of a Dominion council of action to combat war, the other desired that action similar to that of the British Labour Party be taken for preventing war. The Committee on Resolutions recommended for adoption an instruction to the executive council to stand ready to take action by calling a special session of the congress to deal with the question and to decide on what action is considered advisable to combat any war that seeks to embroil Canadian workers.

Following this recommendation one delegate suggested that the Dominion Government should be asked to take a vote of the people before entering any war, failing which a general strike should be called. Another suggestion was that, instead of calling a special convention, a conference of representatives of international labour organizations having members in Canada should be called to take action.

After a number of delegates had spoken the debate was closed by the adoption of a motion calling for the previous question, and the recommendations of the committee adopted.

The other resolutions which were approved were (1) Against military training in the schools and opposition to grants for cadet or other forms of military or naval training; (2) Against the use of military forces during industrial disputes.

#### Hours of Labour

Six resolutions dealing with the hours of labour were submitted by organizations in various parts of the Dominion. These were referred to the Committee on Resolutions, which recommended the following substitute, which was adopted without debate:

Failing agreement being reached at the inter-provincial conference to be held at Ottawa this month definitely placing responsibility for the enactment of legislation to put into effect the findings of the International Labour Conference in connection with the law of nations and part 13 of the Treaty of Versailles, that we ask the federal government to press for an amendment to the British North America Act which will give them the necessary authority to carry out the finding of the international Labour Conference in respect to the eight-hour day, one day's rest in seven, and other labour legislation, and be it further resolved that the incoming executive be instructed to use every means in their power to have the findings of the International Labour Conference referred to herein enacted into law at the earliest possible date.

#### Economic and Industrial Policy

Four resolutions were introduced urging the congress to take action with a view of bringing about amalgamation of the various craft unions into departmentalized industrial organizations. Another resolution, the preamble of which recited what the proposers considered were barriers to the progress of the Canadian labour movement, requested:

1. That to the end that the Trades and Labour Congress may be the real centre of trade union power in Canada, power be given it to increase its per capita and levy assessments.

2. That each international trade union affiliated with the Trades Congress establish

Canadian departments with well defined power and autonomy, all economic and financial activity to be co-ordinated through the international officers at the department head.

3. That each department of the American Federation of Labour (Building, Railroad, etc.) set up Canadian sections, as has been done by the Metal Trades and Railroad Departments.

4. That Canadian departments of international unions be conceded the right to strike and participate in any political activity in the interests of the Canadian working class.

The Committee on Resolutions submitted the following as a substitute for the above-mentioned resolutions:

Whereas, the preamble and the platform of principles of the Trades and Labour Congress of Canada clearly set forth the aims and objects for which the congress is in existence and deal with the various phases of the legislative, economic and industrial matters that vitally affect wage earners throughout the Dominion; and whereas, the constitution of the congress was drawn with the specific object of working in co-operation with the international trade unions on the American continent wherein autonomy in the industrial field is vested in the said international trade unions and the American Federation of Labour; and whereas, experience has demonstrated that it is only by a continuance of this policy and the maintenance of the present form of international trade unions that we can hope to successfully cope with organized capital and its ramifications; therefore, be it resolved, that the Trades and Labour Congress, assembled in annual convention in the city of Vancouver, B.C., hereby reiterates its adhesion to the present form of organization, providing as it does the machinery for closer co-ordination of international craft unions which, in the opinion of your committee, has worked so successfully in the past and been the means of very materially improving the wages and working conditions of the workers, not only in the Dominion of Canada but on the American continent.

A prolonged debate took place on the report of the committee. Several delegates stated that the trade union movement of Canada was demoralized; that the loss in membership was indicative that some other plan of organization was necessary to combat the "strangle hold of organized capital on the workers". In reply the opponents of the proposed change in the present plan of organization declared that the agitation to bring about industrial unionism was propagated by the Workers' Party and the promoters of other disruptive bodies;

that the decline in trade union membership was attributable to persons who seek to destroy the existing unions by a persistent campaign of vilification of trade union officials. One delegate declared that the genesis of the resolutions was the work of that section who had "got a Russian jag on and called themselves Communists". The discussion was finally closed by the adoption of a motion for the previous question by a vote of 101 to 58. A roll call vote was demanded on the substitute resolution of the committee which was carried by a vote of 120 to 53. During the debate a telegram was read from the Toronto Building Trades Council stating that that body was opposed to Canadian autonomy for international unions.

#### Political Action

Two resolutions concerning political action on the part of the Canadian workers were introduced, which, minus the preambles, read as follows:

(1) That this Trades and Labour Congress of Canada, in convention assembled, will, during its present session, devote some time for discussion of plans, whereby funds may be raised and maintained by the organized workers for political purposes; said funds to be used for propaganda and placing in the field at all election campaigns, candidates who will work for and truly represent labour.

(2) That if the present Federal and Provincial Governments continue their attitude of apathy and disregard and fail to take satisfactory action, this Trades and Labour Congress will, through its affiliated organizations, conduct a vigorous and aggressive campaign to ensure that only political candidates who espouse this reform to their platforms will receive the suffrage support of the workers.

The Committee on Resolutions submitted a substitute, which following a brief discussion, was referred back after a suggestion was made that the congress urge all affiliated or unaffiliated local unions to immediately affiliate with the Canadian Labour Party. The recommendation of the committee as finally adopted was as follows:

Whereas, at the Victoria convention in 1906 a definite policy was laid down committing the congress to a recognition of the necessity for labour political organizations as a means of securing the amelioration of industrial conditions and to promote the passage of laws

concerning the welfare of workers in the mines, the factories, the forests, in fact in all walks of life; and whereas, it has been made manifestly plain that effective legislation in this regard and energetic enforcement of such laws can best be obtained by the presence in Parliament, in the Provincial Legislatures, and in other elective bodies of representatives elected from the ranks of labour for the direct interest of labour; and whereas, following the decision of the Ottawa convention in 1917, the congress took steps to co-ordinate the different working class political bodies in the various provinces which action later resulted in the creation of a Dominion-wide labour political organization; therefore, be it resolved, that labour political autonomy be left in the hands of this established labour political party, and the congress again urge all labour organizations to affiliate, and inasmuch as the platform of principles of this congress contains the epitome of the best thought of organized labour during the whole period of its existence and struggles, that this congress continue to act as the legislative mouthpiece for organized labour in Canada, independent of any political organization engaged in the effort to send representatives of the people to Parliament, the Provincial Legislature, or other elective bodies of this country.

#### Picketing and Injunctions

Two resolutions were submitted calling attention to the decisions recently given in Montreal in a suit brought against the Joint Board of the Ladies' Garment Workers' Union as an outcome of a strike. A permanent injunction restraining the union members from picketing was granted by the court and damages amounting to \$200 and costs were awarded. The resolutions were combined, and as adopted, asked the congress (1) to reiterate its attitude towards the issuing of injunctions during labour disputes (2) endorse an appeal for funds to assist the union in appealing against the decision, and (3) urge that steps be taken to have the Criminal Code amended so as to legalize peaceful picketing and persuasion during strikes.

#### Immigration

Three resolutions on this subject were introduced and adopted the demands being:

(1) That the Federal and Provincial Governments make provision for the care of those who are unemployed as a

result of persons being induced to come to Canada through alluring Government advertising.

(2) Condemning the actions of unauthorized persons "filling the country with out-of works" and requesting the Government to put a stop to such procedure.

(3) Protesting against any further entry into Canada of those people who come in under the guise of farm labourers and later take the places of Canadian citizens.

#### Co-operative Societies

The resolution on this subject, which was approved, pointed out that the congress had previously gone on record in favour of seeking legislation for a simplified form of incorporation of co-operative societies, the resolution being:

That the congress reiterate its previous request for legislation of this nature and further adopt the recommendation of the Co-operative Union of Canada, as incorporated in their resolution of friendly greeting to this Congress, recommending to our affiliated units the propriety of appointing a committee on co-operation to study its philosophy, principles and business practice and in the event of any of them becoming interested in co-operative organization to have regard to the past experiences of the Canadian Co-operative Movement by availing themselves of the advantage of the organizational, advisory and supervisory service provided for their protection by the Co-operative Union as isolated attempts at organization are in almost every case doomed to failure.

#### Women's Labour Leagues

Endorsement of women's labour leagues was recommended in a resolution submitted to the convention, the proposers stating that such bodies presented the widest and most helpful field of activity both for home workers and those who work in industries for which no unions exist. The Committee on Resolutions recommended non-concurrence in the proposal. This recommendation led to a debate during the course of which one of the opponents of women's labour leagues declared that they were adjuncts of the Workers' Party. The recommendation of the committee was declared adopted on a *viva voce* vote.

This being challenged a standing vote was taken, which showed 76 in favour of the committee's report and 66 against.

#### Sustenance for the Unemployed

The following resolution approving of sustenance for the unemployed was adopted without discussion:

Whereas, the unemployed situation is of a national character, and is one that cannot be handled satisfactorily by municipal bodies; and, whereas, the extremely low scale of relief tends to lower the standard of living, of the entire wage-working population when unemployment is rife; be it resolved, that we call upon the Federal Government to assume the responsibility for the unemployment situation on a national scale, and that work be paid for at trade union rates and where employment is impossible, relief be paid at the rate of full maintenance on the scale laid down in the *Labour Gazette* and that work of a national character such as the construction of roads be undertaken to provide full sustenance for the unemployed workers.

#### The Nova Scotia Strikes

The following resolution in reference to the strikes of the steel workers and coal miners in Nova Scotia was submitted by the Vancouver Trades and Labour Council:

Resolved, that this convention go on record as being opposed to the actions of President Lewis of the United Mine Workers in aiding the British Empire Steel Corporation by driving the miners back to work after they had struck against the use of troops against the striking steel workers and against the cancelling of the charter of District 26; and be it further resolved, that the convention approves of the action of the militant section of the workers in District 26 in their efforts to maintain their organization in spite of the dictatorial attitude of the United Mine Workers' officials, whose words in the ultimatum delivered to the miners, and which compelled them to return to work, were couched in the language of the ruling class, and strengthened the hands of the Government of Nova Scotia in the crushing of the efforts of the workers to better their conditions in the steel industry.

The Committee on Resolutions recommended non-concurrence in the resolution, pointing out that no resolution on the subject had been received from any local coal miners union in the district, and criticised the Vancouver council, so far removed from the scene, for introducing the matter.

Delegate J. B. McLachlan, the deposed secretary-treasurer of District 26, reviewed the conditions in the locality; stated that the coal miners' strike was nearly won when President Lewis cancelled the charter of the district; dissented from the claim that the contract with the company had been violated by the miners; and condemned the provisional officers now conducting the affairs of the union.

Delegate Silby Barrett, the provisional president of District 26, replied, pointing out that at the time the charter was revoked many of the miners were anxious to return to work, being on the verge of starvation. There were no funds available for relief when the provisional officers took over the affairs of the district; the international president sent money with which to buy food for the needy men who were on strike. Mr. Barrett read the terms of the contract to show that the strike was in violation of the agreement and defended the actions of President Lewis. He also referred to money being paid for a band to provide music for a welcome to J. B. McLachlan on an occasion of his home-coming during the strike, and criticised this expenditure from union funds when the strikers were in need of food.

Delegate Foreman Waye, of the steel workers, contended that the strike had been lost through the action of President Lewis and the provisional officers of the district.

Delegate R. Leavitt in defending the course of President Lewis pointed out that the Canadian miners under charter from the United Mine Workers had complete autonomy in wage contracts; that once contracts are made the policy of the organization is to see that they are not violated, and that President Lewis is the instrument through which the policy of the union and its constitution are maintained.

The debate was here interrupted by the point being raised that the business before the convention was out of order. The president ruled that the point was

well taken and that the whole matter should be expunged from the minutes. Appeal was taken against the decision of the president, which on being put to the convention, was sustained.

#### Other Resolutions Adopted

Other resolutions which were endorsed by the convention contained the following demands:

That the Ontario Municipal Act be amended so as to prohibit the granting of subsidies and fixed assessments to manufacturers in order to prevent competition between municipalities in securing industries.

That the Quebec Government be requested to name a commission to study the housing crisis.

That the Quebec Government be asked to call a conference of all public bodies in the province to decide the question of daylight saving.

That support be given to the Canadian National Railways so long as the railway system gives evidence of improving the conditions of its employees.

That representations be made to the authorities regarding the adjustment of the pay of letter carriers.

That the Ontario Government be requested to amend the Mothers' Allowance Act so as to make provisions for widows with one child in addition to those already provided for.

That the Quebec Government be requested to facilitate the development of education in the province; also, that the Quebec Government be asked to provide for free admittance to the technical and polytechnical schools for workingmen's sons.

That the Quebec Government be requested to completely abolish all private employment agencies.

That approval be given to the Ontario savings offices being continued.

That vocational officers be appointed, the duties of whom shall be, in collaboration with the junior division officers of the Employment Service of Canada, to furnish vocational guidance to children

when leaving school to become wage-earners.

That the Federal Government make a searching inquiry into the affairs of the Home Bank of Canada.

That the British Columbia Government be asked that the provisions of the Townsite Act be applied to all "closed or company towns", and that all such places with a population of over 500 be given some form of elective municipal government, and also that in such industrial towns after an employee has been in continuous employment for the company for six months that two months's notice of dismissal must be given.

Two resolutions regarding demands of Federal office cleaners were referred to the executive council to assist the proposers. The first asked that only widows and self-supporting women be employed as office cleaners. The second requested that the office cleaners be paid on an annual salary basis and be granted the privileges of sick leave, holidays with pay and superannuation. A demand that the Quebec Provincial Government be asked to appoint a commission on prices of fuel and other necessities was also referred to the executive council.

#### The Printers' Strike

Mr. W. R. Trotter, of Indianapolis, Ind., second vice-president of the International Typographical Union, gave an account of the progress of the strike of the printers in the book and job offices for the 44-hour work week. There were 5,684 members drawing strike benefits on November 20, 1922, of which 2,004 were located in Canada; on August 20, 1923, the total number on strike was 2,106, of which 768 were in Canada. From June, 1921, to May, 1923, strike benefits to Canadian unions amounted to \$3,847,797.91; for mortuary benefits, \$29,475 was paid and for old age pensions \$73,272, a total for the two years of \$3,950,544.91. The total receipts from Canadian unions for all funds for the same period amounted to \$969,107.07; the expenditure for the two

years was \$2,981,437.84 in excess of the receipts. Of the amount expended for strike benefits five Canadian cities received the following: Toronto, \$1,657,-681.43; Ottawa, \$302,087.75; Montreal, \$1,033,004.37; Winnipeg, \$430,428.23; Hamilton, \$109,176.21, a total of \$3,-532,377.99. The total receipts from all unions in Canada and the United States from strike assessments from June, 1921, to August 20, 1923, were \$15,810,-503.81, and the expenditures for strike benefits for the same period amounted to \$14,673,565.58, nearly 26 per cent of which was spent in the Dominion of Canada.

#### Fraternal Messages

The special order of business for the Thursday afternoon session of the congress was the hearing of fraternal addresses. Mr. Frank Hodges, secretary of the British Federation of Miners and president of the International Federation of Miners, fraternal delegate from the British Trade Union Congress, in his address referred to the industrial depression in Great Britain and its effect on the workers in that country. The standard of living in the ranks of the workers in Great Britain had depreciated; wages had gone down, the average wage being only about \$9 per week. Notwithstanding present conditions, there was hope that there would soon be improvement. The membership of trade unions had decreased, now being approximately 4,500,000, but it is still higher than before the war. The general well being of the people of Britain, Mr. Hodges stated, would be bettered when the workers had control of constitutional government. There must be more education to bring about advancement in the cause of democracy. The British Labour Party is no longer despised, but is now looked up to as being a respectable body. Referring to Communism, the fraternal delegate declared that the British workers had not condemned it unheard, but had met its exponents in conference. The case for soviets had only to be stated for it to become plain that Russia

had nothing to offer the western world that is better than British democracy. Although there were 2,000,000 unemployed persons in Great Britain who would have to be taken care of this coming winter, the British Labour Party had come to the conclusion that there should not be dumping of surplus workers through employment agencies. The speaker stated that the British Government had spent over £400,000,000 in unemployment doles. He felt assured that if only fifty of these millions had been placed at the combined disposal of organized labour of both Canada and England, in co-operation, they would have found a workable scheme by which the much-needed population could have been placed in Canada upon an economically self-supporting basis, a plan which would have been of advantage to both countries. In concluding his fraternal message, Mr. Hodges referred to the great destiny of the British Labour Party which, he declared, will eventually lead the world out of the chaos of war into the realms of peace, and will bring love where there was hatred and harmony where there has been discord.

Mr. Walter N. Reddick, of Washington, D.C., president of the International Brotherhood of Bookbinders, fraternal delegate from the American Federation of Labour, referred to the similarity of the conditions prevailing in Canada and the United States, and stated that the open-shop campaign now being propagated in the last-named country was being combatted by the organized workers. The American Federation of Labour was ever on the alert to safeguard the rights of the workers, and the delegate trusted that there would be continued harmony between the organized labour forces of Canada and the United States.

Mr. John W. Brown, of Amsterdam, Holland, who is the associate general secretary of the International Federation of Trade Unions, was the fraternal delegate from that body. In his address he stated that 24 countries were in affiliation with the federation, compris-

ing a membership of 20,000,000. Owing to so many labour questions being of an international character, it was inevitable that the organization of labour should be international. The International Federation of Trade Unions was making progress, stated the speaker, who outlined some of its achievements. Although the federation had been maligned by the Third International, that body had raised large sums of money to provide food for the starving people in Russia and Austria; the federation had also prevented war with Russia through the affiliated organized seamen refusing to transport munitions. Mr. Brown urged the continued support of the Canadian workers for the International Federation of Trade Unions, closing with the words "our fight is your fight."

Others who addressed the convention were: Mr. W. L. Best, of Ottawa, legislative representative of the Brotherhood of Locomotive Firemen and Engineers; Mr. J. S. Woodsworth and Mr. Wm. Irvine, labour members in the House of Commons for Centre Winnipeg, and East Calgary, respectively.

Fraternal messages were received from (1) the International Association of Fire Fighters, (2) Amalgamated Association of Street and Electric Railway Employees and (3) The United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. The fraternal greetings of the congress were forwarded to the International Moulders' Union then in session in Cleveland.

#### Officers of the Congress

The election for the presidency of the congress was presided over by Mr. Frank Hodges, the fraternal delegate from the British Trade Union Congress. President Tom Moore was nominated for re-election. He was opposed by Mr.

J. Kavanagh, of Vancouver. The result of the poll was 136 votes for Mr. Moore, 40 for Kavanagh, and one spoiled ballot. Two of the former vice-presidents were defeated for re-election, being succeeded by two Vancouver delegates. Six ballots were required to complete the election of the three vice-presidents. The full list of officers and fraternal delegates for 1923-4 is as follows:

President: Tom Moore, Ottawa; Sec.-Treas., P. M. Draper, Ottawa; Vice-Presidents: J. T. Foster, Montreal, R. P. Pettipiece and A. J. Crawford, Vancouver.

Provincial executive committees: Quebec—Chairman, Gus Francq, Montreal; committee: Omer Fleury, Quebec; Joseph Pelletier, Montreal; Chas. Roberts, Brownsburg. Ontario—Chairman, James Sullivan, Hamilton; committee: James O'Brien, Windsor; Rod Plante, Ottawa; E. Inglis, London. Manitoba—Chairman, J. L. McBride, Winnipeg; committee: Chas. J. Harding, Winnipeg; Geo. Ayers, Brandon; G. H. Palmer, Dauphin. Saskatchewan—Chairman, G. Dealtry, Saskatoon; committee: J. Smalley, Moosejaw; R. Hazeltine and J. Bell, Regina. British Columbia—Chairman, W. H. Cottrell, Vancouver; committee: P. Bengough, Vancouver; M. Sorley, New Westminster; P. Smith, Victoria. The appointment of the Nova Scotia executive was left in the hands of the executive council.

Fraternal delegate to the British Trade Union Congress—J. A. McClelland, Montreal.

Fraternal delegate to the American Federation of Labour—James Sullivan, Hamilton.

London was chosen as the convention city for 1924.

## CONVENTION OF THE CANADIAN BROTHERHOOD OF RAILROAD EMPLOYEES

---

THE twelfth convention of the Canadian Brotherhood of Railroad Employees was held at Calgary, Alberta, on September 17 to 22, with 105 delegates present. The chair was occupied by the president, Mr. A. R. Mosher. The delegates were officially welcomed by the Mayor of Calgary.

In his opening address, President Mosher reviewed the progress of the Brotherhood in the two years since the last meeting in August 1921. While there was slight loss in membership in the first year, he stated that in recent months all membership losses had been regained, and the Brotherhood was again forging ahead. He declared that the Canadian Brotherhood of Railroad Employees was the first organization in Canada to combat successfully reductions in wages based on decisions of the United States Railroad Labour Board.

With reference to the instruction of the last convention recommending that arrangements be made for life and disability insurance he announced that a scheme was being formulated which would extend these benefits to those who desired them within the ranks of the Brotherhood. The Brotherhood had also taken a very active interest in the pension and provident fund scheme of the Canadian National Railways. Referring to the negotiations for amalgamation between the Canadian Brotherhood of Railroad Employees and the Canadian Membership of the Brotherhood of Railway and Steamship Clerks, Freight Handlers and Station Employees, he stated that they had reached the point where full Canadian autonomy for all members had been practically assured

but the whole matter had been held in abeyance because of the personal interests of one or two representatives of the international body. Subsequently practically all the membership of the Brotherhood of Railway and Steamship Clerks, Freight Handlers and Station Employees on the Grand Trunk Railway, Canadian lines, came over to the Canadian Brotherhood of Railroad Employees in a body. He recommended that the Brotherhood should co-operate to the fullest extent in the movement initiated by the railroad shop crafts in Canada for the amalgamation of the various railroad organizations along industrial lines.

A special committee was appointed to consider the question of issuing insurance to the members of the Brotherhood. The proposals of the committee were referred to the Executive Board with the instruction, if the scheme proved practicable and legal, to place the whole matter at a later date before all local divisions.

It was decided to establish a fact-finding bureau which will collect accurate information on the cost of living and other related problems. It will also analyse railway statistics so that correct information may always be available.

The officers elected were as follows: President, Mr. A. R. Mosher, Ottawa; vice-president, Mr. Murdock McLeod, Charlottetown; secretary-treasurer, Mr. M. M. Maclean; also the following district vice-presidents, Atlantic Region, Wm. Allen, Halifax; Central Region, Jas. W. White, Toronto; Pacific Region, C. H. Minchin, Calgary.

It was decided to hold the next convention in 1925 at Toronto.

## BRITISH TRADE UNION CONGRESS

THE fifty-fifth annual conference of the British Trade Union Congress was held at Plymouth, England, from September 3 to 8, and was presided over by the chairman of the General Council, Mr. J. B. Williams. The number of delegates appointed to attend the Congress was 702 representing 167 organizations and a membership of 4,369,268, which was a reduction in membership of 759,000, or 14.8 per cent as compar-

ed with 1922. The reduction, it is stated, was due mainly to losses in individual membership, and only to a minor extent to the non-representation in 1923 of unions included in the 1922 figures.

The following table gives an analysis of the total membership represented at the Congress during the years 1922 and 1923, according to the classification adopted by the Department of Labour for its annual statistics of membership of trade unions:

Group of organizations	1922			1923		
	Number of organizations	Number of delegates	Number of members	Number of organizations	Number of delegates	Number of members
Agriculture .....	1	8	70,000	1	4	30,000
Mining and quarrying.....	7	162	839,902	7	175	784,617
Metal, engineering and shipbuilding.....	42	103	847,274	42	96	706,231
Textile .....	26	112	644,502	*26	90	417,958
Clothing .....	10	29	170,512	10	32	164,817
Woodworking and furnishing.....	8	9	89,298	7	11	73,443
Paper, printing, etc.....	12	36	168,477	13	37	159,806
Building, decorating, etc.....	11	45	396,641	10	28	335,685
Railway service.....	3	24	464,794	3	28	447,374
Other transport.....	9	59	407,570	8	67	405,650
Commerce and finance.....	7	23	193,000	7	24	168,650
Public administration.....	9	21	152,692	10	26	183,264
Miscellaneous .....	19	25	110,976	18	24	89,512
General labour†.....	7	67	673,010	5	60	402,261
Total .....	171	723	5,123,648	167	702	4,369,268

\*In some of the textile trades, not only are amalgamated associations represented as such, but the associations of which they consist send separate delegates. These branch associations have not been reckoned as separate organizations.

†Including general unions of enginemen, etc.

The large decrease in the textile group was partly due to the non-representation at the 1923 Congress of an important organization which sent delegates in 1922. In the public administration group the increase was due rather to new affiliations than to increases in the membership of organizations represented at both congresses.

The Congress gave considerable attention to the discussion on domestic

affairs, notably the "Back to the Unions" campaign, the amalgamation of trade unions, the relations between competing unions in the same industry, the organization of foremen and supervisors, and the organization of women workers. A resolution discussed at last year's Congress (see LABOUR GAZETTE, October 1922, page 1163) regarding joint defence for the preservation of trade union standards by giving greater powers to the General Council was again

proposed, and was rejected on a card vote by a majority of over 1,600,000.

A resolution was adopted expressing deep dissatisfaction with the Government's plan for dealing with unemployment, and calling upon it to formulate adequate and effective measures both to alleviate the grave physical and mental consequences to the unemployed population, and to remedy the serious social distress, and urging the use of state funds to relieve the financial burden of heavily rated districts. A resolution opposing the principle of unemployment by industries was debated, and an amendment adopted by a large majority proposing that the General Council should be instructed to determine the question and report to the next Congress.

Another resolution expressed "emphatic disapproval" of the recommendations of the Cave Committee (see LABOUR GAZETTE, August 1922, page 862) on Trade Boards, and called on the Labour Party to resist to the utmost legislation intended to carry these recommendations into effect.

A resolution was passed instructing the General Council to promote a Bill giving effect to the legal establishment of an eight-hour day and a 48-hour week. After some opposition a resolution declaring that the time had arrived to demand a six-hour working day also passed by a majority of 2,000,000 votes. It was decided to propose amendments to the Shops Act limiting the hours of distributive employees (wholesale and retail) to a 48-hour week, and in other respects bettering the working conditions. Resolutions were also carried urging the prohibition of night work in bakeries, and suggesting amendments to the Factory Act with a view to improving conditions in trades, such as tailoring, etc., carried on in private houses.

The provision of adequate grants to local authorities for housing schemes, to meet the urgent needs of working-class families, was pressed in a resolu-

tion, which also demanded continued legal protection against excessive rents.

A recommendation in support of the principle of giving legal force to voluntary agreements of Joint Industrial Councils, which was left by the General Council to a free vote of the Congress, was defeated by a decisive majority.

The question of workers' education was discussed, some delegates wishing that such education should be definitely adapted to fit the students to take their part in the "class struggle", but no vote was taken on this question.

A telegram was received during the Congress that the Co-operative Wholesale Society agreed to refer all labour disputes to arbitration, in accordance with the finding of the joint committee of trade unionists and co-operators.

By another resolution it was decided that if £12,500 could be raised before the end of September, the General Council should continue the publication of the "Daily Herald" newspaper at least until the end of the present year, and that in the meantime a committee of enquiry should be set up to examine and report upon any economies that could reasonably be effected.

A resolution was also passed in regard to the report of the Anderson Committee, a committee appointed by the Government last March, "to enquire into the present standard of remuneration and other conditions of employment of the various classes of State servants employed in the Civil Service and in the three Fighting Services, and to make recommendations thereon".

Other topics in regard to which resolutions were passed included: old age pensions, pensions for mothers, pensions for the blind, co-partnership, railway fares, the nationalization of railways, the civil and political freedom of civil servants, the French occupation of the Ruhr, and the disagreement between Italy and Greece.

An amendment to the Standing Orders was carried by a large majority to the effect that the secretary of the General Council should give his whole time to the duties; this involved his

being ineligible for parliament. Subsequently Mr. F. Bramley was elected secretary, in succession to Mr. C. W. Bowerman, M.P., who retired under the age limit. No change was made in the General Council.

On September 26, Miss Margaret Bondfield was elected chairman of the General Council of the Trades Union Congress. Miss Bondfield is said to be the first woman in any country to have been

elected to the highest office in a national labour organization. She is secretary of the Women's section of the National Union of General Workers, and was formerly a prominent member of the Shop Assistants' Union and the National Federation of Working Women. She was also present as an adviser at the First Session of the International Labour Conference (League of Nations) at Washington in 1919.

---

## PROCEEDINGS OF THE INTERNATIONAL LABOUR ORGANIZATION (LEAGUE OF NATIONS)

### Fifth International Labour Conference

**B**Y order-in-council of August 17, Mr. Lucien Pacaud, secretary of the High Commissioner of Canada, London, England, and Miss Caroline E. Carmichael of New Glasgow, N.S., president of the National Council of Women of Canada were appointed to represent the Canadian Government as delegates to the Fifth Session of the International Labour Conference at Geneva on October 22. The Honourable Philippe Roy, Commissioner General of Canada in Paris, France, was subsequently appointed in place of Mr. Pacaud who was unable to attend the Conference. Mr. Roy had represented the Canadian Government as delegate to the Second Session of the International Labour Conference held at Geneva in 1920. In the September issue of the LABOUR GAZETTE it was erroneously stated that Mrs. James Carruthers had been appointed delegate to represent the Canadian Government. Mrs. Carruthers was appointed technical adviser to the Canadian Government delegates at the conference. On behalf of the Government of Manitoba Mr. Edward McGrath,

secretary of the Bureau of Labour of Manitoba, was also accredited as a technical adviser to the government delegates.

### Ratifications of Draft Conventions

The government of Czechoslovakia has announced its formal ratification of the draft conventions of the Third Session of the International Labour Conference (Geneva, 1921) concerning the age for admission of children to employment in agriculture, the rights of association and combination of agricultural workers, the use of white lead in painting and the application of the weekly rest in industrial undertakings.

The government of Roumania has announced its formal ratification of the following draft conventions of the third session of the International Labour Conference: concerning the application of the weekly rest in industrial undertakings, fixing the minimum age of the admission of young persons to employment as trimmers or stokers and concerning the compulsory medical examination of children and young persons employed at sea.

## FEDERAL-PROVINCIAL CONFERENCE RELATIVE TO OBLIGATIONS OF CANADA UNDER LABOUR SECTIONS OF PEACE TREATIES.

Resolutions adopted concerning certain proposals of the International Labour Conference (League of Nations) within provincial legislative control.

A CONFERENCE of representatives of the Dominion Government and of the Provincial Governments was held in the Parliament Buildings, Ottawa, on September 24-26, for the consideration of the obligations of Canada arising out of the labour sections of the Treaties of Peace.

The meeting grew out of a resolution which was adopted at a Federal-Provincial conference which was held in September, 1922, (see LABOUR GAZETTE, September 1922, pages 981-2) and was called by the Prime Minister of Canada in conformity with the expressed wishes of the provincial governments. The object in view was to secure an exchange of views regarding the principles enunciated in the Treaties of Peace for the avoidance of labour unrest and also for consultation relative to various proposals for legislative action which have been adopted by the International Labour Conference (League of Nations) in the form of Draft Conventions and Recommendations and which have been deemed by the law officers of the Crown in Canada to deal with subjects within provincial legislative control. The Dominion Government was represented by Honourable James Murdock, Minister of Labour, who acted as chairman, and Honourable Ernest Lapointe, Minister of Marine and Fisheries. The following representatives were in attendance on behalf of the Provincial Governments:—

Nova Scotia — Honourable E. H. Armstrong, Premier; Honourable D. A. Cameron, Provincial Secretary; Hon. James C. Tory, Minister without portfolio; Mr. W. B. MacCoy, K.C., Secretary, Industries and Immigration, Halifax.

New Brunswick — Honourable C. W. Robinson, Minister of Lands and Mines; Mr. J. S. Martin, M.L.A., Chatham.

Quebec — Mr. Louis Guyon, Deputy Minister of Labour.

Ontario — Mr. J. H. H. Ballantyne, Deputy Minister of Labour.

Manitoba — Mr. Edward McGrath, Secretary of the Bureau of Labour.

Saskatchewan — Honourable J. G. Gardiner, Minister in charge of the Bureau of Labour and Industries.

Alberta — Honourable Alex. Ross, Minister of Public Works and Labour; Mr. Walter Smitten, Commissioner of Labour.

The Governments of Prince Edward Island and British Columbia were not represented.

Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, attended the conference for the purpose of explaining the labour provisions of the Peace Treaties, and the proposals which have emanated from the International Labour Conference.

### Purpose of Conference

Honourable James Murdock in opening the conference expressed the hope that the gathering would serve three useful purposes, as follows:

(1) To acquaint the Provincial Governments more fully with the labour provisions of the Peace Treaties;

(2) To assist the provinces, by consultative conference, in determining their attitude towards the labour principles of the Peace Treaties, to which the Parliament of Canada has already given its assent, and to which our country is pledged in agreement with other nations;

(3) To assist the different provinces, by exchange of information and views, in deciding whether measures should be taken to put into force the proposals of those Draft Conventions and Recommendations which fall within provincial legislative jurisdiction.

Mr. Murdock explained that the Draft Conventions and Recommendations, as received from time to time by the Government of Canada, had been examined by the law officers of the Crown with a view to determining whether the subject matters were within the jurisdiction of the Federal or Provincial authorities. The Agenda of the present conference comprised the various Draft Conventions and Recommendations which have been found to be within the provincial sphere of action.

The Minister of Labour went on to point out that in all sixty-three ratifications of Draft Conventions of the International Labour Conference have thus far been registered by various countries, whilst in ninety-four cases ratification has either been completed or recommended to the competent authority. Perhaps a better idea might be obtained of the action already taken in these matters in various countries by referring to one of the Draft Conventions of the First Conference (1919), namely, that which has for its object the regulation of night work among young persons. Following is a list of the countries which have already adhered thereto: Bulgaria, Denmark, Esthonia, Great Britain, Greece, India, Italy, Roumania, and Switzerland, while two other countries — Finland and the Netherlands — have authorized ratification. Ratification has been recommended to Parliament by the following countries: Argentine, Austria, Brazil, Chili, Czecho-Slovakia, France, Germany, Poland and Spain.

Mr. Murdock pointed out that although the Government delegates to the annual sessions of the International Labour Conference had been chosen by

the Dominion Government, the provincial government had been invited to appoint representatives who had been accredited as advisers under Section 389 of the Treaty of Versailles. In the case of the First Conference (Washington 1919), all of the nine provincial governments were represented in this way. Three of the provinces, namely, Ontario, Quebec and Manitoba, were also represented at the Third Session which was held in Geneva in 1921. In conclusion, the Minister observed that the present meeting was intended to be purely consultative in character and not for the purpose of reaching decisions which would be regarded as binding on the respective governments represented. It was hoped that the deliberations would lead to more effective participation by Canada in the work of the International Labour Organization.

#### **Representatives of Canadian Employers and Workers Present**

Since recognition is given in the Labour Sections of the Peace Treaties to the most representative organizations of employers and workpeople in the different countries represented in the International Labour Organization, it was agreed that an invitation should be extended to the Canadian Manufacturers' Association and to the Trades and Labour Congress of Canada, which have been recognized as the most representative organizations of employers and workpeople in Canada, to be represented in the present conference without voting power. Mr. Tom Moore, President of the Trades and Labour Congress, Mr. E. Blake Robertson, Ottawa representative of the Canadian Manufacturers' Association, and Mr. H. W. Macdonnell, Secretary of the Industrial Relations Department of the Canadian Manufacturers' Association, Toronto, availed themselves of this invitation and participated in the discussion of the conference. An opportunity was also given, on request, to Mr. J. Clark Reilly, Secretary of the Association of Canadian Building and

Construction Industries, to present for the information of the conference, a plan which has been proposed by this Association for the training of apprentices in the building trades.

#### Memoranda of Information Submitted to Conference

A memorandum of information was submitted to the conference showing the existing legislation of the provinces on these respective subjects, also indicating the action taken on these matters to date in other countries. A separate memorandum was also submitted to the conference dealing with the present position of the eight hour day movement in Canada and other countries. Copies of these respective memoranda are also available for general distribution in printed form and are entitled respectively:

Bulletin No. 6, Industrial Relations Series, Department of Labour, entitled "Internation-

tional Labour Organization (League of Nations). Laws of Canada bearing on Draft Conventions and Recommendations".

Report No. 5, Wages and Hours of Labour Series, Department of Labour, entitled "Hours of Labour in Canada and other Countries".

The contents of these respective bulletins of information are referred to in the present issue of the LABOUR GAZETTE in the pages immediately following the present article.

The conference opened with a discussion of the labour features of the Peace Treaties and of the respective jurisdiction of the federal Parliament and of the provincial legislatures in relation to these matters. The formal Agenda comprised twenty-one items in all. Unanimous resolutions were adopted on most of the items of the Agenda, which will be transmitted to the respective provincial governments for their attention.

#### Conference Agenda and Resolutions Adopted.

Following is the Agenda of the conference together with the resolutions adopted on the respective items.

##### PROPOSALS EMANATING FROM THE FIRST INTERNATIONAL LABOUR CONFERENCE

#### 1.—*Draft Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week.*

The object of this draft convention is to secure the adoption of a maximum working day of eight hours and week of forty-eight hours for persons employed in public or private industrial undertakings.

No resolution was adopted on the subject but it was agreed that the Federal Department of Labour should proceed as promptly as possible to bring about an up-to-date survey in order to ascertain the present position of the eight-hour day movement in industrial undertakings in Canada, the information obtained by the enquiry to be submitted to all the provincial governments for their consideration.

#### 2.—*Recommendation concerning unemployment.*

This recommendation contains provisions prohibiting the operation of private employment offices, permitting the recruiting of bodies of workers in foreign countries by mutual agreement, providing for the introduction of a system of unemployment insurance and for the co-ordination of public works with a view to the avoidance of unemployment.

The following resolution was adopted on this subject:

Resolved that this conference concur in Article 1 of the Draft Recommendation concerning unemployment and notify the proper authorities accordingly, it appearing that all the provincial governments have adopted legislation to give effect to this recommendation except New Brunswick, which province has given assurance that in view of the premises similar legislation by that province will be considered at the next session of the legislature.

Article 2.—Resolved that this conference is of the opinion that consistent recognition

should be given to the intent of this Recommendation.

Article 3.—No action taken.

Article 4.—The conference concurs in this Recommendation.

3.—*Draft Convention concerning the employment of women before and after childbirth.*

This draft convention makes special provision for the protection of women employed in industrial or commercial undertakings before and after childbirth.

The following resolution was adopted on this subject:

Resolved, that in the opinion of this conference this matter is not a live question in Canada, and appears to be satisfactorily taken care of by local regulations.

4.—*Draft Convention concerning the employment of women during the night.*

This draft convention forbids the employment of women at night in industrial undertakings. The term night signifies in this case a period of at least eleven consecutive hours, including the interval between 10 p.m. and 5 a.m.

The following resolution was adopted on this subject:

Resolved, that in the opinion of this conference the provisions of the Draft Convention concerning the employment of women during the night be accepted as a basis for securing uniform legislation within each province.

5.—*Recommendation concerning the protection of women and children against lead poisoning.*

This recommendation proposes the exclusion of women and young persons under eighteen from employment from certain industrial processes.

The following resolution was adopted on this subject:

Resolved, that we approve of the principle of the Draft Convention concerning the protection of women and children against lead poisoning, and suggest that the law officers of the Crown embody the same in the federal laws regarding white phosphorus; but if in

their opinion this is not competent to the federal authority, the various provinces be requested to enact the necessary legislation.

6.—*Draft Convention fixing the age for admission of children to industrial employment.*

This draft convention forbids the employment of children under fourteen in industrial undertakings.

The following resolution was adopted on this subject:

Resolved, that the conference express concurrence in the subject matter of this draft convention, Honourable Mr. Robinson intimating on behalf of the Government of New Brunswick that the matter will be brought to their attention.

7.—*Draft Convention concerning night work of young persons employed in industry.*

This draft convention forbids the employment of young persons under eighteen years of age at night in industrial undertakings. The term night signifies in this case a period of at least eleven consecutive hours, including the interval between 10 p.m. and 5 a.m.

The following resolution was adopted on this subject:

Resolved, that a general survey be made by each of the provinces in co-operation with the Federal Department of Labour regarding the scope of this convention, and particularly the effect of Article 4 thereof, and that the result of this survey be submitted to a further conference and to the various provinces.

PROPOSAL EMANATING FROM THE SECOND INTERNATIONAL LABOUR CONFERENCE

8.—*Recommendation concerning the limitation of hours of work in the fishing industry.*

This recommendation favours the adoption of legislation limiting the hours of work in the fishing industry in the direction of the eight-hour day and forty-eight hour week.

The following resolution was adopted on this subject:

Resolved, that consideration of the recommendation for limiting the hours of work in the fishing industry be deferred by this

conference pending action that may be taken in regard to the eight-hour day in industry and commerce.

#### PROPOSALS EMANATING FROM THE THIRD INTERNATIONAL LABOUR CONFERENCE

##### 9.—*Recommendation concerning the prevention of unemployment in agriculture.*

This recommendation recommends the consideration of various measures for the prevention of unemployment amongst agricultural workers.

The following resolution was adopted on this subject:

Resolved, that the conference adopt this recommendation and take such steps as may be necessary to secure a proper survey of the conditions existing in the several provinces in relation to these various specified items for the purpose of preparing a periodical report to the International Labour Office, showing the steps that have been taken in the various provinces to give effect to this recommendation.

##### 10.—*Recommendation concerning the protection before and after childbirth of women wage earners in agriculture.*

This recommendation contains various proposals for the protection of women wage earners employed in agricultural undertakings before and after childbirth.

The following resolution was adopted on this subject:

Resolved, that this recommendation is not one which has application to conditions in Canada.

##### 11.—*Recommendation concerning night work of women in agriculture.*

This recommendation favours the adoption of measures to secure to women wage earners employed in agriculture not less than nine consecutive hours' night rest.

The following resolution was adopted on this subject:

Resolved, that the motion with respect to recommendation No. 10 applies also to this recommendation.

##### 12.—*Draft Convention concerning the age for admission of children to employment in agriculture.*

This draft convention forbids the employment of children under fourteen

in agriculture, excepting outside school hours.

The following resolution was adopted on this subject:

Resolved, that in the opinion of this conference this draft convention has but slight application to Canada as there is relatively little employment of children in agriculture, and the subject matter of this convention in so far as it is competent for the provincial legislatures to deal with it is covered by provincial laws in most of the provinces.

##### 13.—*Recommendation concerning night work of children and young persons in agriculture.*

This recommendation advises the adoption of measures to secure to children under fourteen employed in agriculture not less than ten consecutive hours' night rest, and to young persons between the ages of fourteen and eighteen years not less than nine consecutive hours' night rest.

The following resolution was adopted on this subject:

Resolved, that this recommendation is not one which has application to conditions in Canada.

##### 14.—*Recommendation concerning the development of technical agricultural education.*

This recommendation advises the development of vocational agricultural education.

The following resolution was adopted on this subject:

Resolved, that the conference is of opinion that the requirements of this recommendation, as to the first article, are met by the existing legislation in Canada and that the provinces on their part express their willingness to furnish reports for transmission to Geneva in accordance with the suggestion contained in the second article of the recommendation.

##### 15.—*Recommendation concerning living-in conditions of agricultural workers.*

This recommendation advises the adoption of measures to secure proper housing and accommodation for agricultural workers.

The following resolution was adopted on this subject:

Resolved, that this conference place itself on record as approving of the principle of this recommendation and agrees to bring to the attention of the respective governments any appropriate legislation to give effect to the same where practicable and possible.

16.—*Draft Convention concerning the rights of association and combination of agricultural workers.*

This draft convention proposes that the same rights of association and combination should be granted to agricultural workers as to industrial workers.

The following resolution was adopted on this subject:

Resolved, that the draft convention concerning the rights of association and combination of agricultural workers is met in Canada since no statute in this country forbids their association and combination for lawful purposes.

17.—*Draft Convention concerning workmen's compensation in agriculture.*

This draft convention proposes that workmen's compensation laws should be made applicable to those employed in agriculture.

The following resolution was adopted on this subject:

Resolved, that this draft convention be referred by the Federal Government to the different provinces for further consideration and a survey, with the understanding that the Federal Government will transmit to the several provinces the results of the survey.

18.—*Recommendation concerning social insurance in agriculture.*

This recommendation advises that agricultural workers should enjoy the same benefits as workers in industry and commerce under any laws which are passed providing for insurance against sickness, invalidity, old age and other similar social risks.

The following resolution was adopted on this subject:

Resolved, that in the opinion of this conference action on this recommendation be deferred until such time as the conditions

referred to are made applicable to workers in industry and commerce.

19.—*Draft Convention concerning the use of white lead in painting.*

This draft convention contemplates the prohibition of the use of white lead in the external painting of buildings, subject to certain enumerated exceptions.

The following resolution was adopted on this subject:

Resolved, that the provinces take steps to make a survey concerning the use of white lead in painting.

### MINIMUM WAGE LAWS

Certain proposals relative to the desirability of uniformity and co-ordination among the several Provincial Minimum Wage Laws had been included in the conference Agenda, at the request of the Minimum Wage Board of Ontario. A resolution was adopted on this subject in the terms following:

"That this conference commends to the earnest and early consideration of the various provinces the matter of the adoption of uniform minimum wage laws for female workers."

### WEEKLY REST IN INDUSTRY AND COMMERCE

The conference also considered the proposals contained in a Draft Convention of the International Labour Conference (1921), providing for a weekly rest in industry and a Recommendation to the same effect applicable to work in commercial establishments. It was explained that both these proposals related to matters which were regarded as within Dominion jurisdiction.

Following a discussion of these subjects a resolution was adopted by the conference in the terms following:

Resolved, that this conference approves of the principle of the Draft Convention and suggests that the Federal Government take such steps as may be necessary to ensure ratification after consultation with the Attorneys General of the various provinces.

## LEGISLATION IN CANADA BEARING ON PROPOSALS OF INTERNATIONAL LABOUR CONFERENCES

**A** BULLETIN has been issued by the Department of Labour, being Number 6 of its Industrial Relations Series, which shows the extent to which the Draft Conventions and Recommendations adopted at the various sessions of the International Labour Conference (League of Nations) are already met in Canada by existing Dominion or Provincial legislation. The publication was compiled for the use of the Dominion-Provincial conference held at Ottawa during September, the proceedings of which are outlined in the preceding article. The Draft Conventions and Recommendations adopted at the first four sessions of the international body, as well as several Orders-in-Council, and statements by the law officers of the Crown, indicating the authority competent to enact legislation on the various subjects dealt with, have appeared in previous issues of the LABOUR GAZETTE, (First Conference: March 1920, page 208; July 1920, page 852; November 1920, page 1491; Second Conference: October 1920, page 1316, June 1921, page 776; Third Conference: January 1922, page 40; July 1922, page 696; April 1923, page 372; July 1923, page 737; Fourth Conference: December 1922, page 1270; April 1923, page 372).

Existing legislation on the lines of the Draft Conventions and Recommendations is briefly summarized in the following paragraphs, which are based upon information given in the Bulletin. It will be seen that there already exists in Canada a considerable body of legislation on the lines suggested by the Conference; on the other hand several of the proposals are not met by existing legislation.

### First Conference, Washington, D.C., 1919

*Draft Convention limiting hours of work in Industrial Undertakings to 8 in the day and 48 in the week.* — Most of the provinces, by means of factory, shop, minimum wage, or other legislation, have established the eight-hour day or forty-eight hour week for female employees and young persons, and the mining acts of several provinces limit to eight hours the working day of miners working underground. These acts include the Factory and Shops Regulation Act of Nova Scotia; the Mines Regulation Act of Quebec (limiting the working week for boys to 48 hours); the Minimum Wage Acts of Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia; and the Factories Acts of Saskatchewan and British Columbia. In Ontario, miners, except a few with particular occupations, are not permitted to remain underground for more than 8 hours in any consecutive twenty-four hours reckoned from time of arrival at their place of work. In Manitoba a forty-four hour week in connection with provincial public works is also fixed for several trades under authority of the Fair Wages Act; this rule applying to bricklayers, stonemasons, plasterers, plumbers, painters, blacksmiths, carpenters and other occupations. In Alberta the eight-hour limit is fixed for any person working a night shift in a factory, and for miners working underground, the working period in the latter case including the time occupied in going to and from work. In British Columbia an act establishing an eight-hour day for practically all workers was included in a series of acts of the Legislature which were specially enacted in 1921 to conform with the "Washington Conventions". The taking effect of these acts, however, was made contin-

gent upon the passing of similar legislation in other provinces, and therefore (with the exception of the act relating to Maternity Protection) they remain inoperative. The eight-hour day is also provided for underground mine workers, this period to be reckoned from bank to bank. A similar provision is made for persons employed about a smelter, coke-oven, etc. In Yukon Territory, the eight-hour day applies to workmen employed on public works.

The Fair Wages policy of the Government of Canada follows the principle that hours of labour on Government contracts should be those fixed by the custom of the trades concerned in the district where the work is to be performed, or otherwise "fair and reasonable hours" (LABOUR GAZETTE, June 1922, page 548, and Supplement).

*Draft Convention Concerning Unemployment.* — It has been found that the Employment Offices Co-ordination Act may be largely used for giving effect to this Draft Convention. Public employment offices are now maintained in Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, British Columbia, and New Brunswick in cooperation with the federal authorities.

*Recommendation Concerning Unemployment.* — In conformity with the requirements of this Recommendation the operation of private employment agencies for gain is prohibited in Nova Scotia, Manitoba, Saskatchewan, Alberta and British Columbia, while private employment agencies are subject to provincial regulation in Quebec and Ontario. The policy of reserving public work for periods of unemployment is followed to some extent by certain of the public authorities concerned. No legislation exists in Canada which would regulate the recruiting of workers from other countries, or in regard to unemployment insurance.

*Recommendation Concerning Reciprocity of Treatment of Foreign Workers.* — No legislation exists in Canada on this subject.

*Draft Convention Concerning the Employment of Women before and after*

*Childbirth.* — This Convention is met (except in regard to the requirement as to maintenance) by the Maternity Protection Act of British Columbia, enacted in 1921. No legislation on this subject exists in any other province.

*Draft Convention Concerning the Employment of Women During the Night.* — In Canada the provincial factory acts generally prohibit night employment of women; they differ, however, in the length of the night period as defined. In British Columbia the Night Employment of Women Act of 1921, which would prohibit the employment of women in industrial undertakings after 8 p.m. and before 7 a.m., will not take effect until the passing of similar legislation in the other provinces and is not therefore in effect at present.

*Recommendation Concerning the Prevention of Anthrax.* — The Quarantine Act of Canada enables the Governor in Council by regulation to make provision which would give effect to the proposal of this Recommendation. The Dominion Government issued an order in February 1921 making more explicit an order issued in the previous August in regard to anthrax infection.

*Recommendation Concerning the Protection of Women and Children against Lead Poisoning.* — No legislation on this subject appears to exist in Canada beyond general provisions contained in the various provincial factory acts for the protection of employees in factories against the injurious effects of industrial processes. In British Columbia the employment of women and children so that their health is likely to be permanently injured is forbidden, while in Quebec power is given to the Lieutenant-Governor in Council "to classify as dangerous, unhealthy, or incommensurable such establishments as he considers dangerous to the health of the operatives, especially children, young girls and women".

*Recommendation Concerning the Establishment of Government Health Services.* — The provisions of the Dominion Department of Health Act, 1919,

have been declared to be adequate to carry out this Recommendation without further legislation.

*Draft Convention Fixing the Minimum Age for the Admission of Children to Industrial Employment.* — The Factory Acts of the several provinces regulate the employment of young children in respect to age, and in this respect they mostly meet, while some exceed, the requirements of this Draft Convention. The age limit is fourteen years in Nova Scotia, Quebec and Ontario; in Manitoba, Saskatchewan and British Columbia it is 14 for boys and 15 for girls, while in Alberta it is 15 years for boys and girls. The British Columbia Employment of Children Act is one of the series of acts passed in 1921 to become effective contingently on the passing of similar legislation in the other provinces, and is therefore not yet effective.

*Draft Convention Concerning the Night Work of Young Persons Employed in Industry.* — The night employment of children in industry is forbidden or regulated in most provinces of Canada, but the age limit varies. No legislation on these lines appears to have been enacted in the eastern Maritime Provinces, but Quebec, Ontario, Manitoba, Saskatchewan and British Columbia prohibit or regulate such employment. The Night Employment of Young Persons Act of British Columbia when it becomes effective will provide that young persons under 18 years of age are not to be employed in industry, as defined, between 8 p.m. and 7 a.m. This Act, however, will only take effect upon the passing of similar legislation in the other provinces.

*Recommendation Concerning the Application of the Berne Convention of 1906, on the Prohibition of the Use of White Phosphorus in the Manufacture of Matches.* — Canada already adheres to the Berne Convention referred to, a Dominion statute forbidding the manufacture, importation or sale of matches made with white phosphorus having been enacted in 1914.

#### Second Conference, Genoa, 1920.

*Recommendation Concerning the Limitation of Hours of Work in the Fishing Industry.* — No legislation has been enacted by any province of Canada to limit the hours of work in this industry.

*Recommendation Concerning the Limitation of Hours of Work in Inland Navigation.* — No law on the lines of this Recommendation has been enacted in Canada.

*Recommendation Concerning the Establishment of National Seamen's Codes.* — The Canada Shipping Act and its amendments, and the Merchants Shipping Act of Great Britain, together comprise the legislation governing seamen in Canada.

*Draft Convention Fixing the Minimum Age for the Admission of Children to Employment at Sea.* — This Draft Convention is not met by any law existing in Canada.

*Recommendation Concerning Unemployment Insurance for Seamen.* — No unemployment insurance for seamen is provided under any Canadian law.

*Draft Convention Concerning Unemployment Indemnity in Case of Loss or Foundering of the Ship.* — No specific provision is made under Canadian law to meet this Draft Convention. The Canada Shipping Act requires that seamen discharged abroad shall either be provided with employment on some other ship bound for the port where they originally shipped, or be provided with a passage home.

*Draft Convention for Establishing Facilities for Finding Employment for Seamen.* — The law officers of the Crown have advised that the Employment Service of Canada and the employment provisions of the Canada Shipping Act may together be so used as to meet the requirements of this Draft Convention.

#### Third Conference, Geneva, 1921.

*Recommendation Concerning the Prevention of Unemployment in Agriculture.* — A considerable body of Dominion and provincial legislation is

in existence which provides for public instruction in agriculture among other subjects, meeting to that extent the suggestions contained in this Recommendation as to public instruction in better farming methods. On the lines of the suggestion to create facilities for land settlement the Dominion Department of Immigration and Colonization is at present cooperating in a plan for the co-ordination of Dominion, provincial and private land settlement schemes. In regard to the proposals regarding transportation to farm jobs, and the fostering of supplemental industries, no legislation precisely on these lines is in existence in Canada, but transportation is in some cases advanced to men securing work through the Employment Service of Canada. Various provincial acts have been enacted to encourage farmers' co-operation.

*Recommendation Concerning the Protection, before and after Childbirth, of Women Wage Earners in Agriculture.* — No legislation on this subject is in existence in Canada. The Maternity Protection Act of British Columbia is confined to specified "industrial or commercial undertakings", not including farming.

*Recommendation Concerning Night Work of Women in Agriculture.* — There is no legislation on this subject in Canada. The Night Employment of Women Act of British Columbia expressly exempts agricultural workers from its scope.

*Draft Convention Concerning the Age for Admission of Children to Employment in Agriculture.* — While no specific provision is made in any Dominion or provincial act in regard to the age of children employed in agriculture, the effect of the various Provincial School Attendance Acts is to place a limit on such employment which in some provinces even exceeds the requirements of this Convention.

*Recommendation Concerning the Night Work of Children and Young Persons.* — No legislation exists in Can-

ada which expressly meets the requirements of this Recommendation, but indirectly the various provincial laws which make school attendance compulsory tend to preclude the night employment of children of school age.

*Recommendation Concerning the Development of Vocational Agricultural Education.* — In 1913 the Dominion Government passed the Agricultural Instruction Act which provided the sum of \$10,000,000 to be expended over a period of ten years to assist the provinces in promoting agricultural instruction of various kinds. The Act expired last March but the grant was continued for the current year although the amount was reduced from \$1,100,000 in 1922 to \$900,000 for 1923. Appropriations are also made by the Dominion under the Technical Education Act of 1919, to assist the work of technical education in the various provinces.

*Recommendation Concerning Living in Conditions of Agricultural Workers.* — No legislation on this subject exists in Canada.

*Draft Conventions Conceding the Rights of Association and Combination of Agricultural Workers.* — The requirements of this Draft Convention are met in Canada, since no statute in this country forbids association of agricultural workers for "lawful purposes".

*Draft Convention Concerning Workmen's Compensation in Agriculture.* — This Draft Convention is not met in any province of Canada, agricultural workers being expressly excluded from the workmen's compensation acts of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Alberta and British Columbia, and also by implication from that of Saskatchewan.

*Recommendation Concerning Social Insurance in Agriculture.* — No province in Canada has any law establishing a system of public insurance against sickness, invalidity, old age, etc., apart from the various superannuation systems which exist in the Dominion and in the Provinces for the benefit of public employees.

*Draft Convention Concerning the Use of White Lead in Painting.* — No laws exist in Canada which prohibit or specifically regulate the use of white lead in painting.

*Draft Convention Concerning the Application of the Weekly Rest in Industrial Undertakings, and Recommendation Concerning the Application of the Weekly Rest in Commercial Establishments.* — The Dominion Lord's Day Act practically meets the requirements of the Draft Convention and Recommendation. This Act prohibits Sunday work except in emergencies, in any industrial process, in transportation, etc., unless the employees are allowed another complete day of rest, and also declares unlawful the employment of any person for gain in connection with the sale of goods on Sundays. This Act, however, does not supersede any provincial legislation on this subject and prosecution under the Dominion Act may only be undertaken with the consent of the Attorney-General of the province concerned. Further, certain municipalities may, under the terms of their charters, or by powers conferred by special acts, pass by-laws not inconsistent with any Dominion or provincial statute, to regulate the hours during which commercial establishments may remain open for business.

Besides the various provincial laws to secure Sunday as a day of rest, mention may be made of the various provincial Acts forbidding the operation

of street railways on that day (subject, however, to a vote of the ratepayers in the cities and towns affected). In Ontario Sunday work in bakeshops is prohibited and hotel proprietors are obliged by a statute enacted last year, to allow their employees one day's rest in seven. In Quebec, the Lieutenant-Governor in Council is empowered to order hotel and restaurant proprietors to allow their employees one day of rest each week.

*Draft Convention fixing the Minimum Age for the Admission of Young Persons to Employment as Trimmers or Stokers.* — No legislation of the kind proposed is on the statute books of Canada.

*Draft Convention Concerning the Compulsory Medical Examination of Children and Young Persons Employed at Sea.* — No legislation such as is here proposed, has been enacted in Canada.

#### Fourth Conference, Geneva, 1922.

*Recommendation Concerning Communication to the International Labour Office of Statistical and other Information Regarding Emigration, Immigration, and the Repatriation and Transit of Immigrants.*—Full statistics are collected by the Dominion Government, under the Immigration Act, in regard to immigrants coming to Canada from other countries. Arrangements are being made for embodying in periodical reports to be sent to the permanent office of the International Labour Office, such statistical information as is required by this recommendation.

## HOURS OF LABOUR IN CANADA AND OTHER COUNTRIES

---

THE Department of Labour has published a bulletin \* designed to give in brief form as complete information as is available at the present time regarding the hours worked by wage-earners in Canadian industries, together with some general information in regard to hours of labour in other countries. The movement towards an eight-hour day has led to the recent publication of information concerning hours of labour in the states affected and the bulletin issued by the Department deals with the situation in the following countries: Great Britain, Austria, Belgium, Czechoslovakia, Denmark, Esthonia, Finland, France, Germany, Italy, Jugo-Slavia, Latvia, Lithuania, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, India, Japan, Australia, New Zealand, South Africa, United States, Mexico, Panama, Costa Rica, Argentine, Brazil, Chili, Ecuador, Peru and Uruguay.

This subject was of particular interest to the representatives of the Federal and Provincial Governments who met in conference at Ottawa, on September 24-26, to consider the obligations assumed by Canada in connection with the draft conventions and recommendations which have been adopted by the International Labour Conference at the annual sessions held in accordance with

the provisions of the Treaties of Peace, including a draft convention regarding hours of labour, which provides for an 8-hour day and 48-hour week in industrial undertakings with certain exceptions.

Hours of labour are determined by legislation or by agreement collective or otherwise, between the employer and workmen. In the case of many factory trades hours of labour are fixed by the employer and accepted by the employees in accordance with the general custom of the trade or locality, or what the business is considered to require.

In the English-speaking countries, hours of labour are determined more frequently by collective agreements or by individual bargaining than by legislation. In Australia, agreements, when registered, have the force of legislation and in South Africa and New Zealand hours of work in factories are fixed by statute, but in Great Britain, the United States and Canada the working hours of the great majority of wage-earners are determined by agreement between the trades unions and employers concerned or, in unorganized trades, by the employer in accordance with local or trade customs.

Legislative action in regard to hours of labour on this continent has been confined to the hours worked by women and young persons, public employees and persons employed in occupations entailing unusual hazard or carried on under unwholesome conditions.

---

\* Hours of labour in Canada and other Countries, Ottawa, 1923, Wages and Hours of Labour: Report No. 5.

### Canada.

Canadian legislation relating to hours of labour is confined to enactments by the various provinces concerning women and young persons, miners and workers employed in the metallurgical industries and on public works. In addition, Alberta prohibits the employment of any person in a factory at night for more than eight hours.

The Fair Wages policy of the Dominion Government, as laid down in the resolution of the House of Commons in 1900 and orders-in-council of 1907 and 1922, provides for the inclusion in all Government contracts of clauses securing to the workmen concerned the rates of wages and hours of labour deemed to be current in the district in which the work is to be performed. As will be noted later when consideration is given to hours of labour as determined by methods other than legislative, the great majority of the workmen employed on Government construction work belong to the building trades and have an 8-hour day in common with workers in those trades in private employment. In Manitoba, the Minister of Public Works is empowered by law to fix the working hours of employees on provincial public works, and the schedule in effect at the present time calls for an 8-hour day and 44-hour week for skilled workers and a 9-hour day and 50-hour week for helpers. Unskilled labourers and teamsters are employed for 54 and 60 hours per week respectively.

In the Yukon Territory an eight-hour day is provided by ordinance for workmen employed on public works.

The factory acts of all the provinces limit the working period of women to certain hours, thereby prohibiting night work, but within this limitation, there is no restriction imposed by the acts on the number of hours they may be employed except in British Columbia and Saskatchewan. In the former province an 8-hour day and 48-hour week are provided for women employed in factories but the factory inspector has authority to permit an extension of

hours to 9 per day and 54 per week. In Saskatchewan the Act established a 48-hour week for women in factories.

The Minimum Wage Board of Alberta has issued regulations limiting the working hours of women employed in factories, laundries and dyeing and cleaning establishments to 48 in a week. The Saskatchewan Board places a similar limitation on hours of women employed in shops, stores and mail-order houses, and Alberta includes women employed in offices and personal service occupations, such as barber-shops, dance-halls, motion-picture houses, theatres, garages, etc. In Saskatchewan, longer hours may be worked if a special permit in writing has been granted by the Board, and in Alberta women may be employed for longer hours in cases of emergency.

The Minimum Wage Board of Manitoba has limited the working week of women in factories in Winnipeg and Brandon to 48 hours. In Nova Scotia an 8-hour day and 44-hour week is provided for boys and girls working in factories and shops.

In British Columbia, an Act to establish an 8-hour day was passed by the legislature in 1921 but it was provided that the act should not go into effect until similar legislation had been enacted by the other provinces.

The working hours of underground miners are limited to 8 in one day by legislation enacted in Alberta, Ontario and the Yukon, the Ontario law being in force only in those parts of the province that are without county organization and exempting such workers as shift bosses, pumpmen, cage-tenders, hoistmen, persons engaged solely in surveying or measuring and workers in a mine where the number of persons working in a shift does not exceed six. In British Columbia, there is a statutory 8-hour day for all coal and metalliferous miners, both above and below ground, with the exception of persons employed in the office, boarding-house or bunk-house of the mine. In Quebec, mine workers under 17 years of age

may not be employed for more than 8 hours in a day and 48 in a week and in Nova Scotia, the employment of boys between 12 and 15 years of age inclusive in mines is limited to 10 hours per day and 54 per week. In all the provinces, except Quebec, the law permits overtime to be worked in the case of accident or emergency and in certain specified cases.

Persons employed in British Columbia in the refining of metals have an 8-hour day in accordance with an act which limits hours of workers employed about any coke-oven, smelter, concentrator or mineral separation plant.

Collective agreements govern hours of labour in the Canadian railway service, the coal mines of Nova Scotia, the building and printing trades in the large cities, the men's clothing industry in the chief centres and other industries in certain localities. Railway, shop and yard employees and men in freight train service on eastern Canadian lines have an 8-hour day with punitive overtime rates, but railroad telegraphers, clerks, freight-handlers and maintenance-of-way-men are paid punitive rates only after the ninth or tenth hour of service. In passenger train service, the basic day is somewhat less than 8 hours.

Nova Scotia coal miners have an 8-hour day by agreement. In Quebec, a 10-hour day appears to be general among the asbestos miners.

The building trades in the great majority of the cities are employed for 8 hours a day. A 44-hour week obtains for many of these workers particularly in the western provinces. In Ontario and the maritime provinces, weekly hours vary from 44 to 48 and in some cases a 9-hour day or a 10-hour day prevails. In the cities of the province of Quebec, a 9-hour day appears to be general and in the smaller towns and rural districts of all the provinces longer hours prevail than in the larger centres.

The organized printing trades in Canada have an 8-hour day by agree-

ment, weekly hours being 44 or 48. In establishments employing few workers and in smaller towns and villages, hours are longer. The agreements covering the principal employers and trade unions in the men's clothing industry in the chief centres provide for an 8-hour day and 44-hour week. In the women's clothing industry, 44 hours a week is the rule in the large factories but others have weekly hours of 45 or 49. In the manufacture of custom-made clothing hours are longer than in the factory-made clothing industry and weekly hours run as high as 54 but the majority are from 48 to 50. Hours of labour in the textile industry vary from 7 to 10 with a short day on Saturday.

In the lumber industry and the manufacture of wood products, a 10-hour day with or without a short day on Saturday is general in the earlier processes of logging and the manufacture of lumber, lath and shingles. Men employed in sash, door and planing mills have generally a 54 or 55-hour week, a few have a 47 or 50-hour week and in Manitoba and British Columbia, several planing mills have an 8-hour day and 44-hour week. In furniture manufacturing in Ontario, workers are usually employed for 9 hours a day with a short day on Saturday, but longer hours obtain in some factories. In Quebec, a 10-hour day with or without a short day on Saturday is the rule but a few plants operate on a 9-hour day and 54-hour week.

In the manufacture of pulp and paper, the workers engaged in the continuous processes are employed on the 3-shift system as a rule in Ontario, an agreement between certain companies and the trade unions containing provision to that effect. Hours are also divided into 8-hour shifts in the larger plants in New Brunswick, Quebec, and British Columbia. The two-shift system of 12 hours each is in operation in some plants in the Maritime provinces, Quebec, Ontario and British Columbia. The hours of day-workers vary from 8 to 10, in the provinces of Nova Scotia,

New Brunswick, Quebec, Ontario and British Columbia, the 9-hour day being the standard in the larger mills.

In the production of iron and steel, the two-shift system is in general operation in Canada, the workers being employed for 12 hours on day or night shift or, in Nova Scotia, for 11 hours day-work or 13 hours night-work for a 7-day week. Men not engaged in the processes requiring continuous operation are employed from 8 to 10 hours daily, the bulk of these employees working 10 hours a day.

In the metallurgical industries other than iron and steel, 8-hour shifts appear to be the general practice in the eastern provinces as in British Columbia by law. Mechanical workers and general labourers are employed from 8 to 10 hours, the majority working 9 hours.

In the metal trades, the 9-hour day is in force for the larger number of employees but the fact that the railway shopmen have a working day of 8 hours by agreement increases the proportion of these wage-earners employed for an 8-hour day in several of the provinces. A considerable number of men are employed for a 10-hour day in Ontario, Quebec and the Maritime Provinces but in such case a short day on Saturday is usually allowed. Shorter hours on Saturday are frequently the rule also for workers employed for a 9-hour day.

In the manufacture of food products, hours of labour vary from 8 to 10 a day. The largest meat-packing establishments in Ontario operate on an 8-hour day and 48 hour week but some plants have a 55-hour week. In Quebec, a 9 or 10-hour day with a short Sa-

turday is the general rule in the meat-packing plants, and in Alberta and British Columbia packing-house employees have weekly hours varying from 44 to 50. Persons employed in the manufacture of biscuits and confectionery in Toronto work from 44 to 50 hours a week. In other Ontario cities, hours vary from 49 to 55, a short Saturday being general throughout the industry. In flour-milling, the 8-hour day prevails in the western provinces, the 8 or 9-hour day in Ontario and in Quebec a 10-hour day with a short day on Saturday is common. In the continuous work in sugar refineries, the 2-shift system of 12 hours each is general and a comparatively small number of skilled workers in nearly all the plants are employed on 8-hour shifts. The largest class of labour in the refineries is that of workers on a straight 10-hour day who are employed as mechanics, packers, shippers, etc.

In the leather industry, the same variation in hours is found as in other industries. Working hours in tanneries are from 48 to 60 per week and in the manufacture of harness, saddlery, trunks, valises, etc., the range is from 44 to 55. In boot and shoe factories, in the province of Quebec where the largest establishments are located, weekly hours vary from 44 to 58, 52 hours being fairly general.

In the rubber industry, the largest number of employees have a 9-hour day and 49½-hour week, a comparatively large number work 8 hours a day and 45 to 47 hours per week. A 50-hour week is fairly common and a few plants operate on a 10-hour day and 55-hour week.

### Legislation Abroad.

In Australia, registered collective agreements and the awards of the courts of arbitration have the force of legislation, and provision for an 8-hour day has been incorporated in these agreements and awards for many years. In New Zealand, the Factories Act limits hours of women and young persons to 45 in a week and hours of men to 48 in a week and  $8\frac{3}{4}$  in a day.

In South Africa, legislation restricts hours of factory workers to  $9\frac{1}{2}$  hours a day and 50 hours a week, hours of gold miners to 8 hours a day and 48 a week.

In India and Japan, the laws governing factory employment place legal limitation on hours of labour, in the former country the maximum being 60 hours a week and in Japan the working hours of women and young persons under 15 years of age being limited to 11 hours per day. At the end of three years, the age limit of 15 years is to be raised to 16.

Of the Latin American Republics, Ecuador, Peru and Uruguay, have legislation establishing an 8-hour day. In Ecuador, voluntary overtime may be worked but punitive rates must be paid. In Peru, the 8-hour day is provided for a large number of industries but no provision is made for a 48-hour week or for the regulation of overtime, but no woman or young person may be employed for more than 45 hours in a week. In Uruguay, the law restricts weekly hours to 48 for industrial and commercial employees and for maritime workers. In four of the fourteen provinces of Argentine, legislation has been enacted limiting hours of labour to 8 in the day and 48 in the week. In Chili, and the federal legislature of Argentine, bills have been introduced to provide for an 8-hour day and 48-hour week.

In the republic of Panama, a law of 1914 established the 8-hour day for industrial and commercial employees, but it makes no restriction as to weekly

hours of labour and permits overtime to be worked if so agreed by employers and workers. The federal constitution of Mexico confers on the constituent states the power to regulate labour matters provided they adhere to certain standards, two of which are a maximum working day of 8 hours and a weekly rest day. Several states have enacted laws putting these conditions into effect.

In Europe, legislation restricting hours of labour has been enacted in all the various countries. These laws are of two types, those which specify the industries to which they apply and the exceptions to be permitted and those which state the general principle and provide for its application to the various industries by administrative orders. The two largest industrial states of continental Europe, France and Germany, have laws of the latter type. From 1917, earlier legislation limiting hours of labour was amended to reduce statutory working hours to 8 per day. Collective agreements containing provision for a working-day of 8 hours had made the practice the prevailing one in nearly all trades before legal force was given to it.

Laws providing for an 8-hour day for railway workers have been passed in France, Germany, Italy, Austria, Finland, Poland, Spain and Switzerland. Exceptions are permitted in certain cases and special provision is generally made for employees engaged in work of an intermittent kind. Overtime work is restricted by the act or by regulations issued under its authority or by agreement, and punitive rates of pay for overtime work are usually obligatory.

Legislation in European countries covering hours of labour in industrial establishments puts more stress on the 48-hour week than on the 8-hour day. In Austria, Belgium, France, Germany, Norway, Spain and Sweden, it is provided that the daily working hours

may exceed 8 if the weekly hours are not more than 48, the arrangement of hours to be made by collective agreements in some cases or by administrative order in other cases. In the Netherlands, the law imposes an 8½ hour day and 48-hour week, but provides for a transitional period of four years during which hours of labour may be prolonged by 1½ hours in the day and 7 hours in the week in certain undertakings. In Poland and Latvia, the legal limitation is a day of 8 hours and a 46-hour week, and in Italy, Portugal, Lithuania and Jugo-Slavia, the 8-hour day and 48-hour week are imposed by law. All these acts contain provisions regarding overtime work, some laws limiting overtime to a specified number of hours per day or per week or per year; in other countries, the restrictions to be placed on the amount of overtime are at the discretion of the administrative authorities. In almost all cases, provision is made for special rates of wages for overtime work.

In the European States in which the mining industry is an important one—Austria, Belgium, Czecho-Slovakia, Fin-

land, France, Germany, Italy, Norway, Poland and Sweden—working hours of miners are limited by law to 8 per day. In Norway, a 9½-hour day is permitted, but weekly hours are restricted to 48, and in Spain underground miners have a 7-hour day. Methods of calculating working hours vary, but in general, the hours are counted from the time the miners leave the surface to the time they return to it.

In industries involving continuous processes, the majority of European laws make provision for a 56-hour week, or for an average of 56 hours a week over a limited number of weeks, and for longer hours to co-ordinate two successive shifts. In the iron and steel industry of Austria, Belgium, Czecho-Slovakia, Denmark, Finland, France, Germany, Jugo-Slavia, Latvia, Lithuania, Norway, Poland, Portugal, Spain, Sweden and Switzerland, the 3-shift system is required by law. In Norway, the weekly average may not exceed 48 and in Portugal, the straight 48-hour week is required. In Austria, Belgium, Czecho - Slovakia, Jugo - Slavia and Poland, all work in excess of 48 hours must be paid for at punitive rates.

### Great Britain.

In Great Britain, the only legislation regarding hours of labour is the Coal Mines Act, 1919, which limits the working hours of underground workers to 7 in a day, and the hours of surface men to 8 per day, and the laws governing the employment of women and young persons. There are certain restrictions, also, on the hours during which men may be employed in lead, pottery and rubber industries. The number of hours for which women and young persons may be employed is not fixed other than by the limitation imposed by providing that they may be employed only between certain hours and may not be employed at night except in the case of boys over 16 years of age, who may be employed in cer-

tain processes which require to be carried on continuously.

Collective agreements govern working conditions in all the important British industries, and hours of labour are 8 per day and from 44 to 48 per week. In the building trades and in printing and publishing, a 44-hour week is general. In the metal trades, in ship-building, the chemical, pottery and brick industries and in the woodwork-ing and furniture trades, normal weekly hours are 47. In the textile industry, the manufacture of leather goods, the clothing trade, the manufacture of food products and in the distributive trades, the 48-hour week prevails. Shift workers in flour-milling, paper-making and the manufacture of iron and steel

and tinplate are employed on the 3-shift system of 8 hours each. Certain day workers in these industries have a 47-hour week. The principle of the 8-hour day is laid down in the award of the Industrial Court in force on the railways, but men may be employed for 9 hours if necessary for economy, punitive rates to be paid for the ninth

hour. Longer hours may be worked on five days a week to allow of a shorter day once a week. At certain stations, where the interval between trains is considerable, a spread of 10 hours, or where further economy will result, a spread of 12 hours may be put in operation for all classes except drivers, firemen and guards.

### United States.

Legislation enacted by the American Congress to limit hours of labour is confined to public employees, and railway workers. Postal employees and persons engaged on public works or on equipment contracted for by the federal government have an 8-hour day. A day of 8 hours was made the standard day for reckoning the compensation of employees engaged in the operation of trains in interstate commerce by the Adamson law of 1916 but overtime was permitted and punitive rates not required. The Transportation Act, 1920, empowers the United States Railroad Labour Board to decide working conditions in case of a dispute between a railway and its employees. In accordance with the Board's decisions, the punitive overtime rates for the ninth hour, which had been general since 1919, were withdrawn for all classes except the shop crafts. Certain classes retain the right to punitive rates after the ninth or tenth hour of work and in train and engine service the basic day is less than 8 hours.

Laws governing hours of labour have been passed by the state legislatures in connection with the employment of women, public employees, miners, metallurgical workers and persons engaged in some special occupations. Arizona, California, Colorado, Montana, Nevada, Utah, Washington, Wisconsin and the District of Columbia limit to 8 hours the working day of women in certain occupations. California, Utah and the District of Columbia also restrict weekly hours to 48, while Massachusetts and North Dakota have a 48-hour week

law but do not limit daily hours to 8. These laws cover manufacturing and mercantile establishments in all cases except Arizona and Wisconsin. Laundries, hotels and restaurants, telephone and telegraph offices are included in the majority of cases. Manufacturing plants are not within the scope of the Arizona law and that of Wisconsin refers only to street railway employees in first-class cities.

Hours of labour on public works have been legally restricted to 8 is one day in 18 of the states as follows: California, Idaho, Kansas, Kentucky, Maryland, Missouri, Montana, Nevada, New Jersey, New Mexico, Ohio, Oklahoma, Pennsylvania, Texas, Utah, Washington, West Virginia and Wyoming. Ohio also limits weekly hours to 48. Arizona, Colorado, Idaho, Kansas, Massachusetts, Minnesota and Oregon limit the hours of manual workers employed on state work to 8 per day and Colorado and Massachusetts restrict weekly hours to 48. Employees engaged on material contracted for by the state have an 8-hour day in Idaho, Kansas, Montana, New York, New Mexico, Oklahoma, Oregon, Texas and Washington, Oregon limiting weekly hours to 48. Massachusetts provides for an 8-hour day and a 44-hour week for persons working on public printing.

A large number of American cities have made provision for an 8-hour day in their charters or have enacted 8-hour ordinances to cover municipal work.

Laws establishing an 8-hour day for underground miners are in force in California, Colorado, Idaho, Missouri,

Montana, Oklahoma, Oregon, Utah and Wyoming, for all coal miners in the state of Washington, for lead and zinc miners in Kansas and for all miners in Nevada. In Arizona, Montana, and Pennsylvania, hoisting engineers at mines have a statutory 8-hour day.

Legislation providing an 8-hour day for workers about mineral reduction plants has been enacted in Alaska, Arizona, California, Colorado, Idaho, Missouri, Montana, Nevada, Utah and Wyoming.

In addition to these state laws covering certain classes of employees, California, Connecticut, Missouri, New York and Pennsylvania have laid down the principle that 8 hours shall constitute a day's work unless otherwise agreed. Work after 8 hours is to be paid extra compensation, but punitive rates are not required. Illinois and Indiana have similar laws with regard to manual labour; Montana, labour on public highways; Ohio, work in manufacturing plants or in mining, and Wisconsin, work in manufacturing establishments. Arizona has an 8-hour law for employees in electric power plants and Nevada one for workers in plaster and cement mills. Arkansas and Connecticut limit the working hours of employees controlling the movement of trains to 8 in one day and Montana limits the hours of persons employed on irrigation works to 8 daily.

In the United States, collective agreements do not cover so large a proportion of workers as in Britain. In the anthracite and bituminous mining industries, an 8-hour day and 48-hour week are in force for over 90 per cent of the employees, but the non-union miners have longer hours. Surface workers have, as a rule, longer hours

than the underground men. In a large part of the iron and steel industry, the two-shift system has been in force among workers engaged in the continuous processes of the industry, but the movement toward the elimination of the 12-hour day has gained impetus recently with the decision of the American Iron and Steel Institute to adopt the 3-shift system as rapidly as labour can be supplied. The report of the United States Census of Manufactures, 1919, states that in 1909, 96.5 per cent of the wage-earners in the iron and steel industry were in establishments where the prevailing hours of labour were over 60 per week and in 1919 only 67 per cent were in this class. In 1910, only one per cent of the workers in blast furnaces had an 8-hour day, but in 1920 18 per cent worked 8 hours daily.

In 1919, in the American manufacturing industries as a whole, 48.6 per cent of the wage-earners were in plants where the prevailing hours of labour were 48 per week or less, and if only the large plants in the chief industrial centres be considered, the proportion of persons working 8 hours a day is much greater. In 1914, the proportion of workers on an 8-hour day was 11.9 per cent. Meat-packers, garment workers and the larger part of the woollen industry have an 8-hour day. About 70 per cent of the employees in the boot and shoe industry have a working week of 48 hours or less. In the organized bakery trades, building trades, granite and stone trades, among laundry workers, linemen, metal workers, mill workers and in printing and publishing, the prevailing hours of labour in the cities vary from 44 to 48 per week.

## VALIDITY OF INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

### Judgment of Mr. Justice Orde in case arising out of dispute between the Toronto Electric Commission and certain of their employees.

**R**EFERENCE was made in the September issue of the LABOUR GAZETTE on page 986 to an interim injunction granted by Mr. Justice Orde in the Supreme Court of Ontario restraining a Board appointed under the Industrial Disputes Investigation Act, 1907, from interfering with the business of the Toronto Electric Commission or from exercising any of the powers conferred on such a Board by section 38 of the Act. The revised reasons for the judgment have since been received and are published below, for general information. Steps are being taken for an appeal against this judgment.

#### Text of Judgment

TORONTO ELECTRIC COMMISSIONERS V. SNIDER et al.

(Motion for an interim injunction before Mr. Justice Orde in Court, Toronto, 22nd, 23rd and 27th August, 1923.)

Orde, J.:—By virtue of secs. 16 and 17 of 1, Geo. V., ch. 119, and secs. 34 (2) and 36 (1) of the Public Utilities Act, R. S. O., 1914, ch. 204, the plaintiffs are a body corporate charged with the duty of managing and operating the municipal electric light, heat and power works of the City of Toronto. That duty calls for the employment of a large number of men.

In June last representatives of certain of the plaintiffs' employees applied to the Federal Minister of Labour under the provisions of the Dominion Industrial Disputes Investigation Act, 1907, 6-7, Edw. VII, ch. 20, for the appointment of a Board of Conciliation and Investigation. After some correspondence between the interested parties and the Minister, the Minister established a Board, and the plaintiffs declining to recommend any person for appointment as their nominee upon the Board, the Minister appointed one for them under par. 2 of sec. 8 of the Act. The present defendants constitute the Board so appointed.

The plaintiffs at once took exception to the authority of the Board and to the power of the Minister of Labour under the Act to

appoint a Board of Conciliation and Investigation to enquire into matters concerning the operation by the plaintiffs of a public utility belonging to, or managed as a department of a municipality, or to interfere with the civil or municipal rights of the plaintiffs. The Board refused to give effect to the plaintiffs' protest and issued an appointment to proceed with the enquiry. The plaintiff thereupon launched this action, and moved upon notice for an interim injunction, and after notice had been given by my direction to the Attorney-General of Ontario and the Attorney-General of Canada, pursuant to sec. 33 of the Ontario Judicature Act, the motion was very fully argued on the 27th instant.

The writ by its endorsement claimed a declaration that the defendants are acting without lawful authority as a Board under the Industrial Disputes Investigation Act and its amendments in respect of an alleged dispute between the plaintiffs and certain of their employees, and an injunction.

The points in issue are such that, notwithstanding their importance, it is impossible to postpone a decision upon them until the trial of the action. Mr. Duncan declined to consent to the motion being turned into a motion for judgment, but the intention of the Board to proceed immediately with the enquiry necessitated a decision upon what is substantially the whole question involved, though given upon an interlocutory motion.

The question to be determined is whether or not the Industrial Disputes Investigation Act, 1907, with its amendments, was within the powers of the Parliament of Canada, having regard to the provisions of section 91 and 92 of the British North America Act which divides the power to legislate between the Parliament of Canada and the legislatures of the respective provinces.

Counsel for the defendants does not contend that the subject matter of the Act falls within any of the 29 enumerated classes expressly assigned to the Dominion Parliament by sec. 91 but he says that it does not come within any of the 16 classes exclusively assigned to the provinces by sec. 92 and that therefore it falls to the jurisdiction of the Dominion Parliament under the residuary power given by the opening words of sec. 91, as a law made for the peace, order and good government of Canada and he contends that

when so legislating the Parliament of Canada may, as ancillary to the main subject matters of the Act, enact laws which interfere with or override civil and municipal rights within the provinces.

The features of the Act to which objection is taken by the plaintiffs are to be found in those sections which interfere with civil rights and not in the innocuous sections which provide some means for settling industrial disputes. It is those provisions for conciliation and those alone that counsel for the defendant relies upon as falling within the residuary powers under section 91 and as justifying the ancillary coercive sections.

It may not be amiss to observe parenthetically that it is open to argument that legislation for the appointment of a Board whose sole duty is to endeavour to adjust a dispute but who are clothed with no coercive powers, and whose judgment or award has no binding effect, is not a "law" at all in the sense in which that word is used in sections 91 and 92 of the B. N. A. Act. The same end might be attained by a mere resolution of the House of Commons or the Senate. Such a resolution could not affect civil rights, and I can see little practical difference between an Act of Parliament or of a provincial legislature merely appointing a body for that purpose, and a resolution passed by any deliberative body of men. A municipal council might do it, or any religious or fraternal body might do it, with as much force of law as the Act in question when stripped of all those provisions which interfere with civil rights or municipal powers. But it is not upon any such construction that my judgment is based. It may be that any act which the Canadian Parliament or a provincial legislature sees fit to pass is a "law" within the meaning of sec. 91 and 92 of the B. N. A. Act.

The Act in question is entitled "An Act to aid in the Prevention and Settlement of Strikes and Lockouts in Mines and Industries connected with Public Utilities."

The definition of "employers" by par. (c) of sec. 2 in effect limits the operation of the Act to those employing ten or more persons and who own or operate "any mining property, agency or transportation or communication, or public service utility, including, except as hereinafter prescribed, railways whether operated by steam, electricity or other motive power, steamships, telegraph and telephone lines, gas, electric light, water and power works".

The range of enquiry and investigation is to be found in the definition of "dispute" and "industrial dispute" in par. (e) of sec. 2.

(e) "Dispute" or "industrial dispute" means any dispute between an employer and one or more of his employees as to matters or things affecting or relating to work done by him or them, or as to the privileges, rights

and duties of employers or employees (not involving any such violation thereof as constitutes an indictable offence); and, without limiting the general nature of the above definition, includes all matters relating to—

(1) the wages allowance or other remuneration of employees, or the price paid or to be paid in respect of employment, (2) the hours of employment, sex, age, qualification or status of employees, and the mode, terms, and conditions of employment; (3) the employment of children or any person or persons or class of persons, or the dismissal of or refusal to employ any particular person or persons or class of persons; (4) claims on the part of an employer or any employee as to whether and, if so, under what circumstances, preference of employment should or should not be given to one class over another of persons being or not being members of labour or other organizations, British subjects or aliens; (5) materials supplied and alleged to be bad, unfit or unsuitable, or damage alleged to have been done to work; (6) any established custom or usage, either generally or in the particular district affected; (7) the interpretation of an agreement or a clause thereof.

It is not easy to review all the provisions of the Act in detail. Its scheme is very simple. By sec. 5, whenever any dispute (as defined by section 2) exists between an employer (as so defined) and any of his employees which the parties cannot adjust, application may be made by either party to the Minister for a Board of Conciliation and Investigation. Then follow provisions for the appointment of the Board and for the procedure before it. The Board's duties are to enquire into the matters in dispute and to "endeavour to bring about a settlement" and failing a settlement to report (sec. 23 and 25). The Board is not, however, a body of arbitrators, and its report and the findings and recommendations therein have no binding effect whatever, and cannot be enforced, unless the parties have expressly agreed to that effect (sec. 62 and 64).

But it is certain coercive features of the Act to which exception is especially taken by the plaintiffs. The Board is empowered to summon witnesses including the parties to the dispute, to compel the production of books, papers and other documents, and to enter buildings and other premises for purposes of inspection, and to interrogate persons therein, and these powers are sanctioned by penalties for failure to attend or to give evidence or to permit inspection (Secs. 30, 32, 33, 36, 37 and 38).

Sections 56 to 59 contain extremely drastic provisions designed to preserve the *status quo* from the moment the Minister grants the application for a Board until it has made its report. Notwithstanding that the several contracts of employment may have come to an end, or be subject to cancellation for

cause, neither the employers on the one hand nor the employees on the other can exercise their ordinary civil rights of bringing the engagement to an end, or of refusing to renew upon the same terms, if either party sees fit to apply for a Board of Conciliation, without subjecting themselves to serious penalties. Having in view the definition of "dispute" in sec. 2, (e), which includes, for example, "the interpretation of an agreement or a clause thereof", questions as to materials used, hours of employment, sex and age of employees and other matters going far beyond the mere question of wages, the far reaching effect of the prohibitions contained in sec. 56 to 59 will be appreciated. Once the reference to the Board is made neither the employer nor the employee can put an end to the existing situation. The employee must still be retained in his employment and the employer must still pay the same wages, and the employee may not discontinue his employment, the result being that the civil rights of both parties to the dispute are seriously interfered with. Their hands are tied. They continue to be bound by a bargain which they never made until the Board has made its report. It can hardly be suggested for a moment that these provisions are not a direct interference with the civil rights of the parties. That is particularly the case if the dispute is over "the interpretation of an agreement". An employer or employee who seeks the interpretation of an existing agreement may find that instead of being able to go to the courts for a decision he must await the report of the Board, though that report cannot affect his legal rights in any way whatever. But in the meantime neither party can put an end to the contract on the ground of its alleged breach, or exercise any other civil right given him by the law of the province if it comes within the dispute submitted to the Board.

Mr. Duncan justified all these provisions which interfere with the civil rights of the parties as being merely ancillary to the main purpose and object of the Act, namely, the settlement of industrial disputes and the prevention of strikes and lockouts, which, as he argues, comes within the authority reserved to the Parliament of Canada, by sec. 91: "To make laws for the peace, order and good government of Canada in relation to all matters not coming within the classes of subjects by this Act assigned exclusively to the Legislatures of the Provinces". Assuming that the main purpose or object of the Act falls within the residuary power of Parliament under section 91, the judgment of the Judicial Committee in *City of Montreal V. Montreal Street Railway Co.*, (1912) A. C. 333, has made it clear that the provision at the end of sec. 91, which limits the provincial powers even in matters exclusively assigned

to the provinces, applies only to the 29 enumerated classes of subjects assigned by sec. 91 to the Parliament of Canada and "that to those matters which are not specified amongst the enumerated subjects of legislation in sec. 91 the exception at its end has no application, and that in legislating with respect to matters not so enumerated the Dominion Parliament has no authority to encroach upon any class of subjects which is exclusively assigned to the Provincial Legislatures by sec. 92" (p. 343). Mr. Justice Duff, who was one of the three judges whose judgment was ultimately confirmed by the Privy Council in *The Board of Commerce case* (1920), 60, S. C. R., 456, at p. 508, makes this statement: "There is no case of which I am aware in which a Dominion statute not referable to one of the classes of legislation included in the enumerated heads of sec. 91 and being of such a character that from a provincial point of view it should be considered legislation dealing with 'property and civil rights', has been held competent to the Dominion under the introductory clause."

The Act in question here, in my judgment, purports to interfere in the most direct and positive manner with the civil rights of employers and employees, and also with the municipal institutions of this province, both subject matters of legislation exclusively assigned to the provinces by numbers 8 and 13 of the subjects enumerated in section 92. That the operation of an electric lighting, heating and power system for municipal purposes is within the competence of a provincial legislature was held by a Divisional Court in *Smith v. City of London* (1909), 20, O. L. R., 133, and the system is none the less a municipal one merely because it is operated by a commission having a separate corporate existence, but nevertheless a distinct department of the municipal government of the City of Toronto constituted by special legislation, for that purpose, of the provincial legislature. Municipal institutions and the provincial power to legislate in respect thereof are of course subject to encroachment by the exercise of the Federal powers over the 29 subjects enumerated in sec. 91, but under the decision in the *Montreal case*, *supra*, no such encroachment can be justified when the Dominion Parliament is legislating under the residuary power.

If it is suggested that by the provisions which impose penalties, and which subject both employer and employee to criminal prosecution for failure to observe the prohibitions imposed by the Act, it may be justified under the Federal power to pass criminal laws, then I think the judgment of the Privy Council in the *Board of Commerce case*, where a similar contention was made, is applicable. Lord Haldane points out there that the Dominion Parliament cannot pass legislation

interfering with provincial rights and attempt to justify it by ancillary provisions creating crimes: *In re the Board of Commerce Act, 1919, and the Combines and Fair Prices Act, 1919, (1922)* 1 A. C. 191, at pp. 198 and 199.

The recent judgment of the Judicial Committee delivered on the 25th July last in the case of *Fort Frances Pulp and Paper Company v. Manitoba Free Press Co.* might lend colour to the suggestion that there may be cases, notwithstanding what was laid down in the *Montreal Street Railway* case, where in a "national emergency" the Parliament of Canada may have power to pass legislation under the residuary clause infringing upon provincial rights. If that is what is meant, the decision in the *Montreal Street Railway* case must be read with some qualification. Mr. Duncan urged that the prevention of strikes and lockouts was a matter of such national importance as to bring the Industrial Disputes Investigation Act within the principle enunciated by Lord Haldane in the *Fort Frances* case (assuming that it has enunciated a principle which departs from that laid down in the *Montreal Street Railway* case) but whatever the power of Parliament may be to legislate expressly in the event of an existing or threatened nationwide strike of such proportions as to constitute a national danger, I am unable to see how an Act of general application which may be invoked by 10 employees can be treated as having been passed to meet a "national emergency" in the sense in which the *Fort Frances* judgment uses that term. That judgment will require careful thought before giving it any application at variance with earlier decisions of the Judicial Committee, and it may be that the Judicial Committee justified the War Measures Act, 1914, as competent to the Dominion "under other powers which may well be implied in the constitution". As the judgment says: "It is clear that in normal circumstances the Dominion Parliament could not have so legislated as to set up the machinery of control over the paper manufacturers" which was there in question. Here there is nothing abnormal or necessarily of national importance in an industrial dispute or in a threatened strike or lockout, and the desire of the Dominion Parliament to prevent strikes and lockouts, however laudable it may be, and however effective the machinery devised for the purpose might be if Parliament were not hampered by a divided field of legislative power, cannot empower Parliament to invade either directly, or indirectly, under the guise of ancillary legislation, right, either given by the civil laws of the province or existing under the exclusive provincial authority to legislate as to municipal institutions. I have not overlooked the decision in the Province of Quebec, *Montreal Street Railway Co. v. Board of Conciliation and Inve-*

*stigation* (1913), Q. R. 44, S. C. 350. The authority of that decision has been so affected by later decisions of the Privy Council that I do not see that it is binding upon me or that it is now a correct exposition of the law.

Counsel for the defendants raised the objection that there could be no ground for an interim injunction until the Board took or threatened to take steps to put the coercive provisions of the Act into operation. But when asked if he would undertake on their behalf not to do so, he declined. I do not think that the plaintiffs are called upon to wait until the defendants are about to enter their works and have demanded the production of their books and documents before coming to the Court. The granting of an interim injunction is, if course, a matter of discretion, but it calls for the exercise of a little common sense. I think the plaintiffs are entitled to assume that the Board may see fit to exercise or put into force all or any of the coercive powers given to it by the Act, and are not bound to wait until the defendants are demanding admission at their front door.

Mr. Duncan also raised certain objections to the form of the action, urging that it was not a case of a declaratory judgment as claimed by the writ and that no action lay against the defendants. It will be for the trial judge to deal with the former objections, but I desire to point out that if an action for an injunction lies against these defendants, it is of little practical importance whether the plaintiffs ask for a declaratory judgment as to the validity of the Act or not, if in order to determine the right to an injunction or otherwise the Court must pass upon the constitutionality of the Act or of some of its provisions. As to the defendants being proper parties, if they are claiming to exercise to the detriment of the plaintiffs, powers for which there is no legal sanction, the plaintiffs are clearly entitled to enforce their rights by injunction.

I ought to add that I have come to this conclusion with reluctance. I am of course merely dealing with the bald question of law which presents itself for consideration under the provisions of the British North America Act. It seems to be generally recognized that the Industrial Disputes Investigation Act has been a beneficial one and has facilitated the settlement of numerous disputes, and it is to be hoped that whatever the ultimate decision as to its constitutionality may be it will be found possible to pass legislation, either Federal or provincial or both, which will maintain the efficiency of the scheme of the Act.

The plaintiffs press for an injunction restraining the defendants from performing any of the functions which they are called upon by the Act to perform on the ground that the whole Act is unconstitutional. I am

not prepared upon a mere interlocutory motion to go that far; whether or not an innocent enquiry as to an industrial dispute, not fortified by any coercive power, is beyond the competence of the Canadian Parliament, I do not think it necessary at this stage to determine.

The injunction ought to go restraining the defendants from interfering in any way with the business of the plaintiffs and from entering upon the premises of the plaintiffs for the purpose of examining their works or exercising any of those powers given them by section 38. They have no power to enforce the attendance of witnesses, or the production of books, papers or other documents either by the plaintiffs or by anyone else who chooses to withhold them. Of course individual witnesses not parties to those proceedings get no technical protection from this judgment. What remains is that the powers of the Board of Conciliation are in my opinion limited to

an investigation merely of a voluntary character. I think they have no power to enforce, by the means the Act has provided, any of the provisions which interfere with the liberty or freedom of the parties to contract, or the right to strike or lockout, or to carry on their respective businesses as they may see fit. I do not think sections 56, 57, 58 and 59 are effective. Those sections have really nothing to do with the immediate subject matters of this interim injunction because the Conciliation Board does not necessarily enforce them; they are perhaps enforceable by anyone who chooses to lay an information. The Board is, in my judgment, limited to the innocuous duty of investigating and making a report, but cannot put into force those drastic provisions of the Act which interfere with the civil and municipal rights or the rights of property of any party to the dispute. The injunction will continue until the trial, the question of costs being reserved to be disposed of by the trial judge.

## CONDITIONS IN THE BITUMINOUS COAL MINING INDUSTRY IN THE UNITED STATES

Reports of the United States Coal Commission.

ON September 15 the United States Coal Commission issued a report on labour relations in the bituminous coal mining industry, which deals very fully with the subject. The report is based on information obtained by a body of field investigators who spent from March 15 to June 15 in the coal fields interviewing owners, company officers, labour commissions, union officials and others and attending meetings of the Union and operators and sessions of joint adjustment organizations.

Emphasis is laid on the complexity of the problem due to the great diversity of conditions. Among the more important factors making for diversity are physical conditions of the coal regions, transportation facilities, the freight rate structure, market conditions, types of companies, racial composition of the working force and community conditions, organizations of operators and of workers, and of industrial relations.

The frequency of strikes and suspensions of work in the bituminous field is

noted, but it is pointed out that from 1899 to 1921 the time lost by strikes amounted only to 9.8 per cent of the total idle time from all causes in the industry. Three main types of strikes are described: (a) strikes to secure a union agreement, (b) suspensions of work on the expiration of an agreement because of failure to renew agreement, (c) local or petty strikes frequently taking place in violation of an agreement. These strikes, however, cause very little reduction in total output but their chief significance lies in their effect on industrial relations. Their elimination is primarily a problem in administration on the part of the union and secondarily on the part of management of the joint adjustment machinery.

Reference is made to the bad effect on industrial relations of unduly partisan propaganda, and to the wrong attitude frequently adopted toward each other by operators and mine officials on the one hand and union officials and miners on the other.

On September 22, the Commission issued its final report in which are summarized its conclusions and general recommendations which were set forth at greater length in previous reports. The recommendations were in brief as follows:

First among the Commission's recommendations is that Congress make definite provision on a permanent basis for continuing the collection of coal facts both to instruct public opinion and to guide the administrative correction of abuses..... In its educational relation to both the general public and the coal industry, the Government occupies a well defined field of endeavour. We therefore recommend that the Congress designate an agency to unite with the industry in continuing studies of unemployment, as an effect of irregular operation of the rate structure, serving as the medium of publicity for rate information in the non-union fields as well as of all other basic facts on which industrial relations depend.

With continuous investigation of this type, the Government agency is best prepared to make under authority of the President the special compulsory investigation whenever the prospect of failure to renew an agreement is imminent, and with continuous publicity of this type the people will be best prepared to focus upon the negotiators the irresistible moral pressure implicit in their joint obligation to furnish the public with coal.....

To reduce the hazards in coal mining, State and Federal governments must co-operate in inspection, revision of mining codes, supervision of compensation insurance, and in safety education. For the betterment of operating methods and working conditions, State inspectors must be freed from politics; also, the codes of some States badly need revision, and in this the Federal Bureau of Mines can render special service, since unification is essential to remove unfair competition based on the different operating costs under the widely varying safety standards in neighbouring States. The Federal Government is in a position to contribute to the education of the industry since the Bureau of Mines has gone far in its investigation of every element of mine safety operating methods, explosives, and equipment. What is imperative is rigid enforcement of regulations based on present knowledge....

The consolidation, grouping, or pooling of bituminous mining operations should be not only permitted but encouraged, with a view to securing more steady production, less speculative prices, a wider use of long-term con-

tracts with consumers, better living conditions, more regular employment, and lower costs. The existing legal barriers to such an economic arrangement should be removed, retaining, however, the necessary protection to the public interest, by requiring supervision of the financial structure of the consolidation, as is prescribed in the Transportation Act for railroad consolidation....

A substantial part of the amount paid in royalties and in excess profits represents a return to owners of wealth who perform therefore no useful social service and who take no part in production. This form of ownership does not increase efficiency or economy or conservation. It does not contribute to the mining of coal or to making it cheaper. There is no way in which this first deduction from the value of the product can be forcibly prevented, as far as this Commission is aware, except through government ownership, which we believe to be both undesirable and impracticable, or by taxation on the excess profits and royalties, which we recommend, although with no expectation that it will be completely effective as a remedy. Not through governmental coercion but through the enlightened self-interest of producers and consumers, the real remedy is to be sought....

We urge upon the industry a fuller appreciation of the common interest of mine worker and operator in most of the problems that the industry faces. In the all-important matter of mine safety, for instance, miners and operators should join forces. The responsibility of the management to equip and operate the mine with every safety precaution must be matched by individual responsibility by every foreman and worker. Through miners' organizations and safety committees, with regular meetings of officials and workers, much can be done by joint action to protect their common interest.. This common interest in continuous and successful operation finds a concrete expression in the present British wage agreement, which provides that miners and owners share the profits of the business in defined proportions, the profits being figured not on a single mine but on the whole district. The plan is equitable and would probably have won even more enthusiastic support in a more prosperous period than the past two years have been in the British coal trade, and after a longer trial this form of adjusting wages to results may prove to bring about the highly desirable full cooperation of employer and employees in seeking efficiency.

Another opportunity for cooperative effort is in the betterment of conditions outside the mine. Living conditions cannot be standardized either in company towns or where miners own or rent their homes independently of employers, but they can be

greatly improved. Water should be more generally brought into the houses to save work for house-wives and to encourage cleanliness. Bath houses at the mines should be required in all States. There should be more good roads. Sewers should be provided where the expense is not prohibitive and far better sanitary arrangements where sewers are impracticable. Mining camps and towns are not rural in any proper sense even when they are small. Fresh milk and fresh vegetables should form a larger part of the ordinary diet of the miner's family. The dirty one-cow dairy should be inspected and cleaned up or abolished. Education in the elementary principles of diet, the choice and preparation of foods is sorely needed. Facilities for healthy out-door recreation should be very greatly increased. Schools should be improved....

In their labour relations, common interest should lead both operators and the miners, through their organizations, to study the problem of unemployment and together seek to stabilize the industry; to study by joint committees the whole rate structure and its relations to the different jobs in the mines; and to perfect the machinery for settling disputes through conciliation or voluntary arbitration, with the adoption in the non-union fields of adequate checks on the exercise of the right to discharge.

On the part of the operators we recommend that more attention be paid to the problem of labour adjustment. The success of many companies in establishing good relations warrants special attention to the training of foremen in management and to the centering of responsibility in labour relations. The operators also need more effective organization for labour relations and we recommend district and national labour

commissioners, men of the highest type, who can work out a national labour policy. If the Sherman Anti-Trust law prevents the operators from combining together for the purpose of collective bargaining with the miners, which the Commission does not believe is the case, then Congress should exempt them from the operation of the law for that purpose.

While complete autonomy for the widely separated districts may be impracticable, we suggest that the two parties in collective bargaining should work-out a system of national negotiation with district agreements, which will avoid standard-cutting wars between districts and secure adequate flexibility to meet necessary district conditions.

There are valid objections to the check-off, especially in the collection of fines and assessments, and it has also injurious effect upon the union in divorcing the problem of income from the winning of membership, and in the resulting lack of closeness of contact and of educational service and control by the higher officers to the lower officers, and to the rank and file members of the union; yet the check-off is not vital enough to justify the suspension of operations, whether the union is seeking to extend its use or the operators seeking to throw it out....

Storage of coal by consumers is the balance wheel between fluctuating consumption and variable production. Regular, systematic, large scale storage of bituminous coal, then, is the public's largest opportunity in helping to solve the coal problem, and the consumer's responsibility may be said to be proportionate to his annual requirements... Another way open to the consumer in aid of more regular mine operation and steadier market is the purchase of coal on contract.

---

## INDUSTRIAL DISEASE AND ITS PREVENTION IN ONTARIO

---

THE forty-first annual report of the Board of Health of Ontario for the year 1922 includes an account of the work of the Division of Industrial Hygiene during that period. The most important work of this Division is to promote the provision of facilities within industrial establishments for the prevention of sickness and accident. It is estimated that about two years must

elapse before an establishment which has installed such a service begins to receive any financial benefit, but although the returns are deferred by this waiting period, employers have seldom, if ever, been known to discontinue their efforts in sickness prevention once begun. It is estimated that eight or nine days are lost yearly by each industrial worker through sickness, and it is

equally in the interest of employer and employed to take measures to prevent such losses. Representatives of the Division held conferences during the year with prominent employers, and measures were devised which should bear fruit when industrial conditions improve.

A number of industrial establishments in Ontario which carry on hazardous processes now employ the services of physicians for the periodic examination of their employees. No new full-time physicians were appointed to industry during the year, but the number of industrial nurses showed an increase. Many employers now provide facilities for keeping a record of time loss from sickness among their workers, and the demand is increasing among employers and physicians for information on problems of health in industry.

The Division urges physicians to pay particular attention, in diagnosing sickness, to the occupation of the patient. In order to further this work it has compiled information for example on the subject of lead poisoning, including the main processes in which lead is used, points in diagnosis, means of prevention, and legislative provisions. As the result of information obtained regarding occupational disease, certain recommendations have been made as to the special training of medical students in the subjects involved.

Investigations of poisoning in certain hazardous occupations showed the following results. Of a group of house-painters and decorators, all men of long experience at the trade, complaints and defects which might be due to the material used in work were found in 61 per cent, but in less than 10 per cent were these diseases severe enough to present a clinical picture of a case of lead

poisoning. The outstanding complaints found in painters were poor appetite, indigestion, constipation, pyorrhea and bad teeth, frequent coughs and colds, nocturnal polyuria, high blood pressure, hardened arteries, pallor of the face, headaches and neuralgia. In addition there are of course more pronounced effects of lead poisoning. An investigation of paint manufacturing plants had not been completed at the end of the year.

In a similar group of furniture finishers 70 per cent of the men examined showed no effects from the substances in which they worked. The remainder had complaints which might be due to the nature of their work, but only 10 per cent had enough associated symptoms to be considered affected to any extent by the volatile bodies used. The outstanding complaints in this group were poor morning appetite, indigestion, constipation, (teeth and gums not affected as with painters), throat irritation and expectoration, pallor of face, headaches, dizziness and change in weight. An investigation into miners' phthisis was completed during the year. Cases of incipient phthisis discovered were followed up, and all the men are now engaged in other occupations in the mining camps. Similar investigations were made into the effect on the workers of occupations in spray painting, storage batteries, benzol and other classes of establishment. The report urges the need of more accurate records of the length of time workers are exposed to industrial hazard, and of the history of various symptoms in the diagnosis. Until this is done it will be difficult to estimate the influence of the workers' daily exposure to the effects of dangerous substances.

## MINIMUM WAGES FOR WOMEN IN ONTARIO IN 1922

---

A survey of the results so far achieved under the Ontario Minimum Wage Act is made by the Board in their second annual report, covering the year 1922. At the time this report was issued five of the Board's orders had been in force for at least a year, that is, the orders governing laundries, dye works, etc., in Toronto, in other large cities, and throughout the province; the order covering the confectionery and paper goods group in Toronto; and that governing saleswomen and others in retail stores in Toronto. During the year 1922 the Board issued fourteen new orders, dealing with at last sixty trades and covering at least 53,000 female workers. These orders have been summarized from time to time in previous issues of the LABOUR GAZETTE.

It is claimed that although the orders were issued in a period of falling wages the average wages in the occupations covered by the orders have advanced rather than receded. "Our statistics show" the report states, "that the workers are better off in the trades concerned than they were before the orders went into force. It is reasonable to infer that without the protection afforded by these orders they would have been much worse off". These claims are supported, in regard to the first five orders, by tables showing wage conditions before each order was issued, and after the order had been in force for a year. Thus, taking the confectionery manufacturing group the average weekly wages of adult female workers rose from \$10.99 to \$14.20, while the average wages of girls under 18 dropped from \$9.84 to \$9.52. The number of young girls who were employed showed a reduction, indicating that minimum wage legislation tends in a measurable extent to replace juvenile with adult labour. This tendency toward a relative decrease in the number of young girls employed

is evident also in the retail stores and laundry groups. The decline has been in the number of girls at the bottom of the wage scale, many who were formerly employed at weekly wages under \$7 or \$8 being eliminated, or receiving higher wages as the result of orders of Board. Some weight, however, must be allowed in this connection to the operation of the Adolescent School Attendance Act, under which children must continue school attendance up to the age of 16 years, except those who receive permits of exemption from the local authorities. The Board finds that juvenile employment increases during periods of trade stagnation when the family wage earner is without work and the children are drafted into industry in order to provide the necessities of life. The Adolescent School Attendance Act was an attempt to reverse this process, but its effectiveness in this direction is difficult to estimate owing to the varying practice of the local authorities in the granting of employment permits to adolescents. It would appear, however, that the Adolescent School Attendance Act and the Minimum Wage Act have operated jointly to check the practice of using young children to supplement the family income.

Summarizing the benefits which have been secured by the Minimum Wage Act the report claims that all the lowest wages have been cut out, and "thousands of women and girls have been lifted from unsocially low wage levels into the region of independence and self-support". This result has been reached without injury to industry; employers of the better type are protected against their wage-paring competitors; industrial peace is promoted since the minimum wage scales have been fixed only after the assent and cooperation of both parties had been secured; the minimum wages do not tend to become

the maximum wage of the class affected — on the contrary, wage increases are found among the higher paid as among the lower paid workers. The displacement of workers resulting from the orders cannot be accurately stated, since, as the report says, “for every girl that lost a job, more than one girl got a job”. All that can be fairly said is that orders

of the Board have never been the cause of a general reduction of working force. The Board makes a practice of annually revising the cost of living budgets which form the basis for the minimum wage rates. Five revisions were made during the year under review, but in none of these did the Board find any justification for altering its rates.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF SEPTEMBER, 1923, AS REPORTED BY EMPLOYERS

VERY little change in the situation was indicated by employers of labour at the beginning of September; there were fluctuations in various industries resulting in a slightly unfavourable balance of employment. The tendency during the same period of last year had been almost imperceptibly upward, as may be seen in the accompanying chart, but the curve of employment during the present year continued to be on a much higher level. Statements were received by the Dominion Bureau of Statistics from 5,794 firms whose payrolls comprised 821,471 persons. On August 1 these same employers reported an aggregate working force of 824,398 persons. This reduction of less than 3,000 persons caused the index number to drop from 100.2

on the latter date to 100.0 for the period under review. During the corresponding month of last year it had stood at 93.7 and on September 1, 1921, at 88.7. Employment in railway construction, water transportation, lumber, textile and tobacco works and on highway construction declined considerably partly owing to men leaving to work in the harvest. Since agriculture is not represented in these statistics, the very important increase in employment afforded by that industry is not shown. Iron and steel, rubber, mining, railway and local transportation and building construction were considerably more active. The commencement of operations in some logging camps caused net increases in employment, although local fluctuations were still shown in that

industry. Trade absorbed a larger number of persons, and employment in hotels and in communication again increased moderately.

Firms in the Maritime Provinces and Ontario registered considerably increased payrolls, while elsewhere curtailment was indicated. In the former district marked recovery in rolling and forging mills and in coal mines was supplemented by expansion in railway transportation. Some curtailment was reported on highway construction and in water transportation, while fish canneries and sawmills in that district were rather less fully employed. In Quebec the largest individual declines were recorded in shipping and stevedoring; an extended inventory and holiday period caused employment in textile and tobacco factories to be dull, and further contractions were also registered in logging. On the other hand, considerable revival was shown in rubber, railway transportation, highway and building construction and in retail trade. Important fluctuations were registered in Ontario. Abattoirs, electrical apparatus, iron and steel factories, logging camps, telephones, railway transportation, building and railway construction and retail trade recorded marked improvement. On the other hand, sawmills, furniture, musical instrument, cereal, printing, rubber and petroleum factories, water transportation and wholesale trade showed reduced activity. Very large losses were reported in railway construction and maintenance in the Prairie Provinces, repeating the movement usually experienced at this time of year, when harvesting operations draw upon the labour market to such an extent. Apart from the declines in railway construction, there was, on the whole, a favourable tendency in employment in the Prairies. Coal mining and local transportation, in particular, recorded increased activity. Logging operators in British Columbia registered smaller payrolls than at the beginning of August, and fish canneries, sawmills

and building contractors were not so busy. The mining of metallic ores, however, employed larger working forces and shipping and stevedoring firms also were busier. The situation in all provinces continued to be more favourable than at the same period of last year; this may be seen from the following table of index numbers:

District	Relative weight	Sept. 1 1923	Aug. 1 1923	Sept. 1 1922	Sept. 1 1921
Maritime Provinces..	9.2	101.4	97.8	90.8	93.5
Quebec .....	23.8	100.1	101.9	91.6	87.4
Ontario .....	42.3	98.1	97.1	91.9	83.7
Prairie Provinces ...	13.0	101.1	104.3	101.2	98.5
British Columbia....	8.7	106.6	107.2	102.9	95.6
Canada .....	100.	100.0	100.2	93.7	88.7

An analysis of the returns by cities shows that employment in Toronto, Winnipeg and Vancouver was slightly more active, while in Montreal, Ottawa and Hamilton curtailment was indicated. The losses in Montreal were almost entirely due to reduction in working force in shipping and stevedoring and to a temporary shutdown of a large tobacco factory, which affected a considerable number of persons. Textile factories, particularly cotton and garment works, moreover, were less fully engaged. On the other hand, substantial recovery was reported in rubber works, and improvement was shown in glass factories and in some other industries. According to reports from 712 employers in Montreal, their payroll, including 107,480 workers, was less by 3,939 persons than on August 1. A moderately upward tendency was evidenced in most industries in Toronto, the largest increases occurring in garment, meat slaughtering and packing and electrical apparatus works and in retail trade. These gains were to some extent offset by reductions in personnel in musical instrument, printing, sheet metal and other iron and steel plants. A total working force of 97,913 persons was reported by the 794

concerns making returns, who had employed 96,969 workers at the beginning of August. The changes in Ottawa were slight; there were small declines in a number of industries, chief among these being sawmills, iron, steel, pulp and paper factories. Statements were received from 120 employers with a total working force of 10,831 persons as compared with 11,082 the month before. Cotton factories in Hamilton registered a substantial drop in employment; there were increases in machinery, electrical apparatus and electric current works, but the gains were not sufficient to offset the declines in textiles mentioned above. Reports from 196 employers showed that they employed 27,954 persons on September 1, while on August 1 the number working for them was 28,393. Returns from 287 Winnipeg employers showed that they had added 94 persons to their payrolls, which stood at 25,430. Moderate improvement was recorded in a number of industries, that in building construction, hardware, iron and steel fabrication factories being the largest. In Vancouver, also, the expansion was on a rather small scale; shipping and stevedoring and steel ship yards reported the most important gains, while sawmills were less active. Returns were tabulated from 222 firms employing 22,540 persons as compared with 22,377 at the beginning of August. The index numbers of employment in these cities may be seen in the following table:

City	Relative weight	Sept. 1 1923	Aug. 1 1923	Sept. 1 1922
Montreal .....	13.1	93.6	97.3	90.5
Toronto .....	11.9	89.6	89.1	88.3
Ottawa .....	1.3	107.5	109.3	.....
Hamilton .....	3.4	92.2	93.3	.....
Winnipeg .....	3.1	89.9	87.5	98.9
Vancouver .....	2.7	104.3	103.6	102.2

### The Manufacturing Industries

A further but slight reduction in employment was indicated by the 3,824 manufacturers making returns; their payrolls comprised 458,817 persons as compared with 461,250 employees on August 1. Varying conditions within the group produced this net result; sawmills registered considerable reductions in personnel, indicating the completion of the season's operations in many mills. Thread, yarn, cloth and tobacco factories were decidedly less fully engaged and slight curtailment was reported in petroleum works. On the other hand, the resumption of work in an important rubber factory, temporarily closed down at the beginning of the preceding month, caused a large increase in employment. General improvement was indicated in iron and steel factories, especially in railway car and automobile works, in shipyards, rolling and forging mills; sheet-metal plants, however, were slacker. The production of electrical apparatus showed an increase and works manufacturing petroleum products were busier. The trend of employment in manufacturing at the first of September, 1922, had been favourable, but the index number of employment then stood nearly 6 points lower.

**EDIBLE ANIMAL PRODUCTS.** — Abattoirs and meat packing plants were decidedly busier, but dairies and fish canneries were not so fully employed. The net change in employment in this group was very slight; 14,301 persons were employed by the 170 firms reporting as compared with 14,341 on August 1. The Maritime Provinces and British Columbia registered curtailment, but elsewhere improvement was recorded. Practically no change in the situation had been indicated during the same period of last year, when the index number stood very slightly higher than at the present time.

**LUMBER AND ITS PRODUCTS.** — For the first time since January the trend of employment in the lumber industry as a whole was downward, indicating the

completion of the season's work in many mills. Container and furniture factories, moreover, continued to be slack. Statements tabulated from 729 manufacturers showed that they employed 60,089 persons, while at the beginning of the preceding month their staffs had aggregated 61,861. Ontario sawmills reported the greater part of this decrease of 2.9 per cent, although reductions were recorded in all except the Prairie Provinces. Less extensive contractions had been registered at the beginning of September of last year, when employment was in somewhat smaller volume.

**PLANT PRODUCTS — EDIBLE.** — Very little change on the whole was recorded in this industry. Fruit and vegetable canneries continued to show seasonal activity, but flour and other cereal mills and sugar refineries were rather slack. A total working force of 26,442 persons was employed by the 279 concerns reporting, a loss of 95 workers since the preceding month. Curtailment of operations was indicated on the whole in the Maritime Provinces, Quebec and Ontario, while in the Prairie Provinces and British Columbia improvement occurred. Substantial additions to staff had been recorded by the firms reporting at the first of September, 1922, and employment then was in somewhat greater volume than for the period under review.

**PULP AND PAPER PRODUCTS.** — Employment in this industry declined moderately, especially in printing and publishing houses. Pulp and paper mills, on the other hand, were slightly busier. Quebec and Ontario firms reported contractions, while in the Maritime and Prairie Provinces increased activity was indicated. Reports were received from 452 manufacturers with a combined working force of 53,576 persons as compared with 53,734 at the beginning of August. The difference represented a decline of .3 per cent. Additions to staffs had been indicated at the same period of last year, but the

group then was not as fully engaged as at the present period.

**RUBBER PRODUCTS.** — Considerable recovery from the losses recorded in the two preceding months was indicated at the beginning of September, when 739 persons were added to the staffs of the 31 concerns making returns. Their pay rolls comprised 10,143 persons as compared with 9,404 on August 1. The greater part of this increase of 7.9 per cent was due to the reopening of rubber and elastic goods factories in Quebec, while moderate declines were recorded in Ontario. Considerable curtailment of employment had been registered on September 1, 1922.

**TEXTILE PRODUCTS.** — Conflicting tendencies were indicated in the textile group, but the balance of employment was decidedly unfavourable. Garment and personal furnishing factories showed marked revival, but much larger declines were recorded in the production of thread, yarn and cloth. The latter were partly due to temporary shutdowns for short periods in a number of factories in which work has no doubt been resumed before this. The statements, 579 in number, showed that at the beginning of September, 67,860 persons were employed in textile factories, which in the month before had provided work for 69,593 persons. Practically all of this 2.5 per cent decline occurred in Quebec, although there were nominal reductions in the other provinces. Contractions on a smaller scale had been indicated during the same period of last year, and the level of employment for the two months was practically the same.

**TOBACCO, DISTILLED AND MALT LIQUORS** — Heavy losses in employment were recorded in tobacco factories, although the reductions were of a temporary character. Ninety-eight firms in the group registered an aggregate payroll of 10,169 persons as compared with 11,583 in the last report. Practically all of this 12 per cent decrease occurred in Quebec. The index number

of employment during the corresponding period of 1922 stood some 12 points higher; the trend of employment then was slightly upward.

**ELECTRICAL APPARATUS.** — Complete recovery from the contractions reported at the beginning of August was shown in this group, 198 persons having been added to the payrolls of the 31 firms making returns. As they employed 8,253 persons on September 1 as compared with 8,055 the month before, this represented an increase of 2.5 per cent which occurred almost entirely in Ontario. An upward tendency had also been indicated during the same period of last year, when the situation was decidedly less favourable.

**IRON AND STEEL PRODUCTS.** — Employment in this group showed improvement of a general character. Rolling and forging mills, railway car, automobile, ship building and machinery factories were much more fully employed, as were also iron and steel fabrication plants. On the other hand, sheet metal, foundry and machine shops, wire and tool works reported offsetting declines. The Maritime Provinces and Ontario registered considerable increases; in the Prairie Provinces and British Columbia there were minor gains, while in Quebec the tendency was downward. Returns were compiled from 616 manufacturers with a total payroll of 132,116 persons as against 130,328 at the beginning of August. There was, therefore, an increase of 1,788 persons or 1.4 per cent. Expansion on a somewhat larger scale had been indicated at the beginning of September, 1922, but employment then was in much smaller volume than at the present time.

**NON-FERROUS METAL PRODUCTS.** — Smelters and refineries in Ontario and British Columbia were more fully engaged, while in the other branches of this group practically no changes were indicated. Statements tabulated from 108 firms showed that they employed 12,490 persons as compared with 12,344 on August 1. Improvement on a much

larger scale had been indicated at the beginning of September of last year; the index number of employment then was, however, very much lower than in the month under review.

**MINERAL PRODUCTS.** — Employment in the petroleum and its products group decreased to some extent at the beginning of September, when 155 fewer persons were employed by the firms making returns than on August 1. As they employed 9,619 persons as compared with 9,774 on the latter date, this was a decrease of 1.6 per cent, the greater part of which took place in Ontario. A decline of about the same size had been indicated at the same time last year, but conditions then were not so good.

#### Logging

The commencement of the season's operations in logging camps in Ontario caused considerable additions to staffs; these gains, however, were partly offset by declines in Quebec, the Prairie Provinces and British Columbia. Expansion on a considerably larger scale had been indicated during the early part of September, 1922, but the index number then stood a good deal lower than on September 1 of this year. According to reports from 204 employers, their payrolls, aggregating 16,212 persons, were larger by 238 or 1.5 per cent than in the last report. It may be expected that very much more extensive gains will be shown during the next few months.

#### Mining

**COAL MINING.** — Marked improvement was recorded in this industry, which brought the index number slightly over the level of September 1, 1922, when additions to staffs, though on a smaller scale, had also been indicated. A combined working force of 29,390 persons was maintained by the 91 operators making returns, who had employed 28,354 persons at the beginning of August. A large share of this increase of 3.7 per cent occurred in Nova Scotia, while considerable expan-

sion was reported also in the Prairie Provinces.

**METALLIC ORES.** — Copper, gold, zinc, silver and lead mines in British Columbia afforded more employment than in the month before, but in Ontario a slightly downward tendency was in evidence in metal mines. Returns were received from 48 concerns employing 11,997 persons or 125 more than on August 1. The situation continued to be much more favourable than at the corresponding period of last year, when a minor increase only had been registered.

**NON-METALLIC MINERALS, OTHER THAN COAL.** — Asbestos mines in Quebec, gypsum and stone quarries in the Maritime provinces reported increased activity, there being a gain of 136 in the number of persons employed in the non-metallic mineral group. The payrolls of the 69 mines making returns aggregated 6,742 as compared with 6,606 in the month before; the difference represented an increase of 2.1 per cent. Employment was in rather greater volume than at the same period of last year.

#### Communication

Continued activity was reported in this industry. Additions to staffs were registered by both telegraphs and telephones. The Maritime provinces and Ontario reported the bulk of the increases in the latter division, which were more pronounced than those on telegraphs. The firms reporting, 163 in number, employed 21,787 persons as compared with 21,532 on August 1. There was, therefore, an increase of 1.2 per cent. Expansion on a much smaller scale had been indicated in this group at the beginning of September, 1922, and the index number then was lower than for the period being surveyed.

#### Transportation

**STREET RAILWAYS AND CARTAGE.** — Electric railways in Ontario and to a less extent in Quebec, were more fully engaged than in the month before. A total working force of 20,242 employees was recorded as compared with 19,920

in the early part of August, the difference representing a gain of 1.6 per cent. Slightly less activity was indicated than at this time last year, although a very large contraction had been experienced at that time.

**STEAM RAILWAYS.** — The trend of employment in steam railway operation continued to be distinctly upward, especially in Ontario, Quebec and the Maritime provinces. According to returns from 104 concerns and divisional superintendents, 82,754 persons were employed by the operation departments of the railways, whereas on August 1, 79,912 men had been engaged. This increase of 3.6 per cent caused the index number to be considerably higher than at the same period of 1922 when additions to staffs on a much smaller scale had been indicated.

**SHIPPING AND STEVEDORING.** — Very large reductions in payroll were reported in this industry at the beginning of September. Quebec registered heavy losses; in the Maritime provinces and Ontario there were decreases on a somewhat smaller scale, while in British Columbia the trend of employment was upward. According to returns from 61 employers they had released 3,282 persons from their payrolls, which on September 1 totalled 11,442. This was a decline of 22.3 per cent. Employment in shipping and stevedoring was considerably duller than at the beginning of September, 1922, when improvement had been recorded.

#### Construction and Maintenance

**BUILDING CONSTRUCTION.** — Further expansion was registered by the 312 contractors reporting; these firms had increased their staffs by 838 men, or 4.7 per cent, to 28,577 on September 1. Quebec and Ontario reported a large share of this increase. Improvement was also indicated in the Maritime provinces, but in British Columbia contractions were recorded. Increases on a much smaller scale had been reported at the beginning of September of last year, but the volume of employment

afforded then was considerably smaller than at the present time.

**HIGHWAY CONSTRUCTION.** — Employment on public highways showed the first decline that has been indicated since the end of February. The declines, however, were in all probability partly due to men leaving their work to assist in the harvest. Statements were received from 53 employers whose staffs aggregated 12,762 persons as compared with 13,542 at the beginning of the month before. Practically all this decline of 5.8 per cent was reported in the Maritime provinces. Employment on public highways continued to be more plentiful than during the same period of last year, when contractions had also been indicated.

**RAILWAY CONSTRUCTION AND MAINTENANCE.** — Considerable reductions in personnel were registered in this industry, largely owing to men leaving the construction departments of the railways to take part in the harvest. The contractions were confined to the Prairie provinces, while elsewhere improvement was recorded. The working force of the 33 concerns and divisional superintendents reporting declined from 54,067 persons on August 1 to 51,420 for the period under review, a decrease of 4.9 per cent. Declines of a similar size were indicated at the same period of last year but the situation then was less favourable than at the present time.

#### Services

**HOTELS AND RESTAURANTS.** — Employment in hotels continued to show a favourable trend. Seventy-one employers in this division recorded a combined working force of 8,673 persons or 145 more than at the beginning of August. A large share of this increase of 1.7 per cent took place in British Columbia. Greater activity was indicated than at the beginning of September, 1922.

#### Trade

Improvement on a moderate scale was registered in retail stores, 197 of

which reported an aggregate working force of 34,246 as compared with 33,984 sales persons in the month before. This increase of .8 per cent occurred mainly in Quebec and Ontario. In wholesale trade very little change was indicated. Returns were received from 357 wholesalers employing 20,103 persons, or 39 less than at the beginning of August. Reductions in this division in Ontario were offset by general improvement in the remaining provinces. Employment in trade as a whole had shown an upward movement at the beginning of September of last year, as in the period

being reviewed, but the index number then was not as high as at the present time.

The table on page 1141 gives the index numbers of employment by industries as at September 1 and August 1 of this year and September, 1922 and 1921. As usual the first column shows the proportion of employees in each industrial group in relation to the total number of workers reported in all groups for the month under review. (Number of workers employed in January, 1920, equals 100).

---

### EMPLOYMENT OFFICE REPORTS FOR AUGUST, 1923

---

THE business of the offices of the Employment Service of Canada during the month of August, 1923, was much augmented by the continuous and urgent demands for harvesters and farm workers in the prairie provinces. In spite of the fact that the registration of applicants regularly increases in response to the call for harvesters, the demand was greatly in excess of the supply. As shown by the accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, the curve of vacancies continued the upward trend of the previous month, reaching a point higher than at any period during 1921 and 1922. The curves of applications and placements show marked increases also, the latter rising to the highest point in the last two years. The reports from the offices

show that the average number of applications registered daily at the offices was 2,257 and 3,121 during the first and second half of the month respectively, as compared with 2,528 and 2,537 during the same periods of last year. During the latter half of July, 1923, applications averaged 1,740 daily. Vacancies notified by employers averaged 2,143 during the first half of August as compared with 1,770 during the preceding period and with 2,562 during the same period a year ago. The average number of vacancies reported daily during the latter half of the period was 3,327 as compared with 3,031 during the same period last year. The average number of placements made daily by the offices was 1,931 and 2,828 during the first and second half of the month respectively, as compared with 2,095 and

The following table gives the placements effected to date by the offices of the Employment Service:

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920 .....	366,547	79,265	445,812
1921 .....	280,518	75,238	355,756
1922 .....	297,827	95,695	393,522
1923 (3 months).....	209,139	84,236	293,375

During the month of August the offices made 66,273 references to positions and effected a total of 64,702 placements. Of the latter 57,481 (53,645 of men and 3,836 of women) were in regular employment and 7,221 in casual work. Opportunities for employment numbered 74,440, of which 64,357 were Many buildings are now under construction and these, in addition to power house erection at Halifax and repairs to wharves gave employment to many, while provincial highway work was still

2,243 during the corresponding periods of 1922. Placements during the latter half of July, 1923, averaged 1,389 daily. Of the placements made during the period under review the average number in regular employment was 1,673 and 2,552 daily, and in casual work 258 and 275 daily during the first and second half of the month respectively. for men and 10,083 were for women. The number of applicants for work during the month was 73,033, of which 62,953 were men and 10,080 were women.

Placements in regular employment by provinces were as follows: Nova Scotia, 693 men, 79 women; New Brunswick, 481 men, 107 women; Quebec, 1,687 men, 404 women; Ontario, 9,698 men, 971 women; Manitoba, 10,470 men, 592 women; Saskatchewan, 14,094 men, 590 women; Alberta, 9,513 men, 420 women; British Columbia, 7,009 men, 673 women.

#### MARITIME PROVINCES

The local demand for farm help was very slight, the workers being sent to the prairies to assist with the harvest.

very active. Railway maintenance operations were progressing with a number of labourers transferred to this work to New Glasgow from Sydney. Logging and lumbering industries employed a number of filers, lathe sawyers and pulp peelers, from the offices at New Glasgow, Moncton and Chatham. The women's section reported continued calls for experienced housemaids and cooks.

#### QUEBEC

Quebec offices reported a slight decline in the vacancies for farm help, with a few workers being transferred to the western fields. The building industry continued active with building tradesmen and labourers well employed. The fall demand for loggers and bushmen was beginning to be felt and an increasing number of orders were received at the offices at Quebec, Hull and Montreal. Work along shore and at the harbours was fairly active.

#### ONTARIO

The agricultural sections of Ontario reported an active demand for general farm labourers, with many fruit pickers required in the Niagara Peninsula, and tobacco and beet farmers at Chatham. The response to the calls for workers for the harvest fields in the western provinces was very great. In the northern sections of the province, especially near Cobalt and North Bay, there was an increased demand for labourers for the building of houses, power plants, dam construction, and highway and road work. In addition, the cutting through of transmission lines and excavations for steel tower bases for electric companies employed a number of workers. Municipal roads at Kitchener and Belleville, building operations at Kingston, Oshawa, Peterboro and St. Catharines gave work to many. Slight difficulty was experienced in a number of centres in securing sufficient labourers to meet the demand for tiemen, steel laying and section gangs. The commencement of the logging season was marked by a large and continuous demand for bushmen, wood-

cutters and teamsters, at the offices at North Bay, Ottawa, Pembroke, Sault Ste. Marie, Sudbury, Timmins and Toronto. Millmen and sawyers were in demand in large numbers. Calls were received for a few muckers and miners for the lead mines near Ottawa and for underground miners at Timmins and Cobalt. Manufacturing industries were busy. There was a small demand for assemblers, packers, and women workers for the metal trades at Toronto, and for silver polishers, brass moulders, die-makers, and weavers for the woollen mills at Kingston, Peterboro' and Oshawa. There were calls for sailors and firemen at Sarnia and Sault Ste. Marie. The demand for domestic workers was as previously reported with a slight slackening in the number of casual jobs offered.

#### MANITOBA

The seasonal demand for harvesters was reflected in the large number of workers placed through the offices at Winnipeg, Brandon and Dauphin, while many were sent to Saskatchewan points. During the month under review there has been little change in the building industry, all tradesmen being actively employed. A few calls were registered for building labourers and road workers to replace those going to the harvest fields. Little difficulty was experienced in recruiting workers for the railway maintenance and construction gangs. At Brandon and Winnipeg a keen demand for city and farm domestics and housekeepers was reported.

#### SASKATCHEWAN

The number of vacancies for harvest labour increased rapidly, and in addition to local workers many men were placed on farms from the eastern provinces and British Columbia. Teamsters, road labourers and carpenters, were in demand for construction purposes, with a slight shortage of workers. Vacancies for section men, bridge men, ground workers and labourers for railway construction, were received at all the offices. There were increased calls for women household workers and cooks

for the harvest crews, with a scarcity of trained applicants.

#### ALBERTA

Numerous demands for general farm labourers, harvesters and tractor operators were received at the offices, with a slight shortage of experienced workers. In the building industry small repair jobs predominated with a fair demand for building labourers and tradesmen. Road repairs, railway maintenance and construction work employed many as teamsters, section hands, extra gang labourers and bridge men. The logging industry showed a slight increase in activity with many calls for bushmen, tiemakers, mill hands and teamsters. Manufacturing industries were quiet with a few placements being effected of brickyard labourers and cement workers.

#### BRITISH COLUMBIA

There was little demand locally in the agricultural group, but a large number of workers were transferred to Alberta and Saskatchewan to assist with the harvest. Many fruit pickers and packers were required in the Okanagan district during the latter part of the month. Road work was nearing completion in some localities, while in others there were calls for railway men, teamsters, graders and labourers. A steady demand for building tradesmen and labourers was reported, while workers were required in numbers for the irrigation project at Penticton. Railway construction and maintenance work at Prince George and Vancouver continued to absorb a few workers. Fully experienced bushmen, sawyers, swamper and teamsters, were called for in large numbers for the logging camps near Cranbrook, Fernie, Nelson and Prince Rupert. Owing to the exodus of workers to the harvest fields an increased number of orders were received for muckers, metal and machine miners, at the offices at Cranbrook, Nanaimo, Prince Rupert and Vancouver. The same scarcity of trained domestic workers prevailed, with an increased demand.

#### The Movement of Labour

During August, 1923, the offices of the Employment Service of Canada effected 57,481 placements in regular employment, of which 46,904 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 11,209 were granted the Employment Service reduced rate, 4,017 going to points within the same province as the despatching office and 7,192 to other provinces.

Quebec offices issued 301 special reduced rate certificates, 49 of which were issued from Montreal and Quebec to sawmill hands and bushmen going to points within the zones. In addition the office at Hull transferred 98 bushmen to points in Ontario; Montreal granted certificates to 101 bushmen going to Sault Ste. Marie and to 3 line-men going to Toronto, while Quebec transferred 50 bushmen to Sudbury, Ont. The offices in Ontario granted special certificates to 1,232 persons, of whom 1,029 were going to points within the province and 203 to other provinces. Of the provincial transfers, 417 were bushmen going to camps near Sudbury, Sault Ste. Marie, North Bay, Timmins and Ottawa. More than 550 were mill workers, railway construction and road labourers, going to Port Arthur, Timmins and North Bay; a few were carpenters, engineers and blacksmiths. From Windsor 3 marine firemen were transferred to Sarnia, 1 locomotive repair man was transferred from Toronto to Timmins, 1 miner from Sudbury to Sault Ste. Marie, and 4 mine muckers from Cobalt to Ottawa. From the office at Timmins 4 carpenters were transferred to Hull; from Fort William and Port Arthur 188 farm hands were sent to the Winnipeg zone, and 11 farm hands to Yorkton and Moose Jaw in Saskatchewan. The offices in Manitoba despatched 3,216 workers at the reduced rate, of which 1,057 were going to points within the province. Of the latter, 8 carpenters, 18 teamsters, 1 sawyer, 2 planer men, 2 painters, 1 porter and

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF AUGUST, 1923.

\*271 Placements effected by offices since closed.

2 cooks were transferred from Winnipeg to Brandon and Dauphin and other points within the zone, the remainder of the transfers being farm workers. Of the transfers to the other provinces, the office at Winnipeg shipped 397 to Ontario points, the majority being railway construction, building and road labourers, several sawmill workers, carpenters and a few bushmen. To points in Saskatchewan 1,728 farm workers were sent from Winnipeg. Alberta offices received 34 workers, including farm help and household domestics from the Winnipeg zone. In Saskatchewan 517 workers benefitted by the special reduced rate, one of whom was a domestic going from Regina to Montreal, Que. Two were harvesters and 1 a machinist going from Regina to Brandon and Winnipeg, Man.; 6 were harvesters going to Drumheller, Edmonton and Calgary, Alta. Of the provincial transfers, the majority were harvesters and farm workers going to various points in the province. A few were teamsters, road workers and graders and bushmen, while from Regina one teacher transferred to a point within the zone. Alberta offices granted 1,132 transportation certificates, 1 of which was given to a lumber shipper going from Calgary to Prince George, B.C., and 4 to farm hands going to points

near Saskatoon and Swift Current, Sask. The transfers within the province were mainly of farm hands; 6 were miners, 2 were fire rangers, more than 50 were teamsters and bush workers, with a few construction labourers and section hands. The number of workers transferred at the reduced rate from British Columbia offices was 4,811, of whom 248 were going to points within the province and 4,563 to other provinces. The provincial transfers included 1 harvester sent from Kamloops to Vernon, 15 bushmen, 2 miners and 1 structural iron worker from Nelson to Revelstoke and Cranbrook, 57 bushmen and labourers from Prince George and Prince Rupert, and\* 3 miners from Prince Rupert. The transfers to Manitoba were of 9 harvesters going to points near Winnipeg. The 2,598 workers transferred to points in Saskatchewan were harvesters and thresher hands, with a few experienced engineers. To points in Alberta there were transferred 1,956 harvesters.

Of the 11,209 workers who benefitted by the Employment Service reduced rate, 4,035 were carried by the Canadian National-Grand Trunk Railways, 6,925 by the Canadian Pacific Railway, and 249 by the Temiskaming and Northenr Ontario Railway.

## BUILDING PERMITS ISSUED DURING AUGUST, 1923

**R**EPORTS from 56 cities tabulated by the Dominion Bureau of Statistics show that the value of the building permits issued decreased during August, when the estimated cost of building work declined to \$12,541,593 from \$13,544,137 in July. There was therefore, a reduction of \$1,002,544 or 8 per cent. In comparison with the figures for August, 1922, there was a larger falling off in prospective building, as the total for the 56 cities in August, 1922, was \$17,946, 228. The difference (\$6,404,635) represented a decrease of 35.7 per cent, which reflected to a considerable extent

reaction from the exceptional high level for that month due to the granting of a permit for a drydock in Vancouver.

Forty-nine cities made detailed statements showing that they had issued slightly over 1,300 permits for dwellings at an approximate valuation of \$5,480,000 and for some 2,800 other buildings estimated to cost \$3,960,000. In addition authority was granted for the erection of a grain elevator in Vancouver at a proposed cost of \$1,200,000.

Quebec and British Columbia recorded increases in the value of the building permits issued as compared with the

preceding month; there were gains of 2.5 and 144.4 per cent, respectively, in those districts. Of the reductions in prospective building elsewhere those of \$359,142 or 92.2 per cent in New Brunswick and of \$229,358 or 50.5 per cent in Alberta were the largest percentage decreases, but the actual loss of \$1,506,304 or 21.8 per cent in Ontario was most extensive.

All provinces recorded less anticipated building than in August of last year. The decreases of \$3,486,971 or 57.2 per cent in British Columbia and of \$1,385,335 or 20.4 per cent in Ontario were especially marked. As mentioned above, the large decrease in the former province was a falling off from the unusually high total recorded in August, 1922, on account of the granting of a permit for a drydock in Vancouver.

Montreal and Vancouver reported larger totals of prospective building

than in July, but reductions as compared with August of last year. Toronto and Winnipeg showed decreases in both comparisons. Of the smaller centres, Westmount, Stratford, Sault Ste. Marie, Windsor and Victoria recorded increases in the value of the building permits as compared with July and also with August of last year.

The value of the building permits issued from the beginning of this year to the close of August showed a decline as compared with the same period of last year. There was, however, an increase over the first eight months of 1921. The total from January to August, 1923, was \$95,139,941; for 1922, \$103,689,217 and for 1921, \$76,245,999.

The table on this page shows the value of the building permits issued during August as compared with July, 1923 and with August, 1922. The 35 cities for which records are available since 1910 are marked by asterisks.

FAIR WAGE CONTRACTS, SEPTEMBER, 1923

**D**URING September, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to thirty-one fair wage contracts of which twenty-nine were awarded by the Department of Public Works and two by the Department of Railways and Canals. These contracts contain the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS  
Concrete pipe tunnels, Fort Osborne Barracks, Winnipeg, Man. Name of contractors, Mackaw and Macdonald, Winnipeg, Man. Date of contract, September 8, 1923. Amount of contract, \$8,974.

Dredging basin and channel, St. Emile, Lothbinière Co., Que. Name of contractors, National Dock and Dredging Corporation, Limited, Levis, Que. Date of contract, August 31, 1923. Amount of contract, Class "B", 39 cents per cubic yard, scow measure.

Dredging C. N. R. Slips, Pictou, N. S. Name of contractors, Glasgow Dredging Company, Ltd., Queensport, N.S.

Date of contract, September 8, 1923; Amount contract, Class "B", 70 cents per cubic yard, scow measure.

Dredging the channel, Michell's Bay, Ont. Name of contractors, The Chatham Dredging and General Contracting Company, Limited, Chatham, Ont. Date of contract, September 4, 1923. Amount of contract, Class "B", 28 cents per cubic yard, place measure.

Dredging eastern entrance channel, Toronto, Ont. Name of contractor, John E. Russell, Toronto, Ont. Date of contract, September 6, 1923. Amount of contract, Class "B", 56 cents per cubic yard, scow measure.

Dredging slips and deepening harbour and removal, etc. of temporary pile breakwater, Port Arthur, Ont. Name of contractor, Canadian Dredging Co., Ltd., Midland, Ont. Date of contract, September 7, 1923. Amount of contract, Class "B" 35 cents per cubic yard, place measure, and \$1,500 for deepening harbour.

Dredging, Whitby, Ont. Name of contractor, The Randolph Macdonald Company, Limited, Toronto, Ont. Date of contract, September 4, 1923. Amount of contract, Class "B" 65 cents per cubic yard, place measure.

Dredging the channel and the basin, Pointe Traverse, Ont. Name of contractors, The Frontenac Dredging Co., Limited, Toronto, Ont. Date of contract, September 5, 1923. Amount of contract, Class "B" \$1.10 per cubic yard, place measure.

Dredging in front of Aberdeen elevator, Tiffin, Ont. Name of contractor, Wm. Bermingham, Kingston, Ont. Date of contract, September 10, 1923. Amount of contract, Class "B" 75 cents per cubic yard, scow measure.

Dredging area on east side of revetment wall, Hamilton, Ont. Name of contractor, The C. S. Boone Dredging and Construction Company, Limited, Toronto, Ont. Date of contract, September 12, 1923. Amount of contract, \$10 each for piles.

Dredging, Curry's Cove, N.B. Name of contractor, J. A. Gregory, St. John West, N.B. Date of contract, Septem-

ber 17, 1923. Amount of contract, Class "A" \$8 per cubic yard, Class "B" \$1.10 per cubic yard, barge measure.

Dredging, Canso, N.S. Name of contractor, W. McFatrige, Halifax, N.S. Date of contract, September 17, 1923. Amount of contract, \$95 per day of 10 working hours and \$5 per hour to be deducted from rental rate for five hours or more lost at any one time due to stress of weather.

Dredging, Lunenburg, N.S. Name of contractors, Acadia Contractors Limited, Halifax, N.S. Date of contract, August 2, 1923. Amount of contract, Class "A" \$9 per cubic yard, (in situ), Class "B" 58 cents per cubic yard, scow measure.

Dredging the channel and basin, Valleyfield, Que. Name of contractor, Les Chantiers Manseau, Sorel, Que. Date of contract, September 19, 1923. Amount of contract, Class "B" 49 cents per cubic yard, in situ.

Repairs to breakwater adjacent to southern shore, Toronto Island, Ont. Name of contractors, The Randolph Macdonald Company, Limited, Toronto, Ont. Date of contract, August 30, 1923. Amount of contract, \$10 per ton of rubble stone for the execution of said works.

Supply and installation of new boiler in Customs House, London, Ont. Name of contractor, R. A. Milne, London, Ont. Date of contract, September 5, 1923. Amount of contract, \$3,703.

Extension to eastern breakwater, Matane, Que. Name of contractors, J. R. and J. Elz. Boulanger, Montmagny, Que. Date of contract, August 27, 1923. Amount of contract, \$3.78 per cubic yard, for crib-work complete and stone ballasted.

Overhauling and repairing Dredge "Fruhling" No. 303, British Columbia dredging fleet. Name of contractor, B.

C. Marine Engineers and Shipbuilders, Limited, Vancouver, B.C. Date of contract, September 5, 1923. Amount of contract, \$15,490 and unit prices.

Descriptions of work	Rate	
Cleaning out of oil tank.....	\$298.00	Bulk sum.
Bitumastic, put on hot.....	0.40	per sq. foot
Chipping .....	0.25	per square ft
Litharging .....	0.35	per square ft
Chipping and caulking.....	0.25	per square ft

8-Laying mooring posts.....	Each	22.00
9-Broken stone filling under railway track.....	3square yds.	1.05
10-Macadam .....	3square yds.	1.60
11-Concrete sidewalk.....	Lin. feet	2.25

Reconstruction of 170 lineal feet of east pier construction, Cobourg, Ont. Name of contractor, V. T. Bartram, Toronto, Ont. Date of contract, September 12, 1923. Amount of contract, unit prices.

Description of work	Unit of Measure	Rate per Unit
1-Preparation and clearing of site as per Clause 7 of specification.....	Bulk Sum.	\$1,500.00
2-Round piles, 16" butt, 8" tip, 22' long, worked, driven and cut off.....	Lin. feet	\$1.00
3-Tie-rods 1 1/4" dia. complete .....	lb.	.30
4-Stell wailing, 12 channel @ 20.5 lb. per ft. complete .....	lbs.	.07
5-Crib face-timber, 10" x 12" x 20' (including drift bolts).....	M. ft. B. M.	100.00
6-Stringers, 10" x 12" x 22', including drift bolts....	M. ft. B. M.	100.00
7-Timber seat for concrete blocks, 4' 6" long more or less (including drift bolts) .....	M. ft. B. M.	100.00
8-Concrete footing block including lifting staples.	Cu. yards	14.00
9-Mass concrete.....	Cu. yards	12.00
10-Steel reinforcement.....	lbs.	.07
11-Timber wailing, 10" x 12" x 20' painted including bolts .....	M. ft. B. M.	100.00
12-Cast-iron Bollards, painted .....	Each	60.00
13-Gravel on top of stone filling .....	Cu. yards	2.00
14-Additional stone filling..	Cu. yards	1.50

Construction of a wharf connecting the actual government wharf and the actual western breakwater and of a protection pilework along the actual government wharf, Matane, Que. Name of contractors, J. R. and J. Elz. Bou langer, Montmagny, Que. Date of contract, August 27, 1923. Amount of contract, unit prices.

Description of Work	Rate	
1-Protection piles, driven in place and secured.....	\$10.56	each
2-Foundation piles driven in place ready to receive the cribwork .....		
(a) piles, 22 ft. long.....	7.65	each
(b) piles, 21 ft. long.....	7.35	each
(c) piles, 17 ft. long.....	6.80	each
3-Cribwork stone ballasted and secured in place.....	3.25	cu. yard
4-Mooring posts.....	8.00	each
5-Ladders .....	17.00	each
6-Stone ballast in rear of front row of foundation piles....	1.60	cu. yard
7-Brush in rear of front row of foundation piles....(cart loads) .....	3.00	per c. load

### POST OFFICE DEPARTMENT

The following is a statement of payments made in September, 1923, for supplies ordered by the Post Office Department subject to the regulation for the suppression of the sweating system, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of order	Amount of order
Making metal dating stamps and type and other hand stamps and brass crown seals .....	\$ 983.01
Making and repairing rubber stamps, daters etc.....	177.74
Making up and supplying letter carriers' uniforms, etc.....	20,441.13
Repairing scales.....	176.00
Repairing boxes and hampers, etc.....	129.30
Supplying ink.....	209.09
Mail bag fittings.....	15,650.95

## DEPARTMENT OF RAILWAYS AND CANALS

Supply and erection of the super-structure of a highway steel fixed bridge over the Old Welland Canal, St. Catharines, Ont. Name of contractors, Sarnia Bridge Company, Limited. Date

of contract, September 10, 1923. Amount of contract, \$4,033.

Improving the Upper Entrance to the Rapide Plat Canal. Name of contractors, A. W. Robertson Limited, Montreal, Que. Date of contract, September 18, 1923. Amount of contract, schedule rates.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1923

**T**HE price level was practically unchanged during the month. The average cost of a weekly family budget in terms of retail prices was slightly lower, owing to a seasonal decline in the price of potatoes. The index number of wholesale prices calculated by the Dominion Bureau of Statistics and that of Professor Michell were both up slightly, while the Labour Department index number, and that of the Canadian Bank of Commerce, however, were down somewhat.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.46 at the beginning of September, as compared with \$10.53 for August; \$10.28 for September, 1922; \$11.82 for September, 1921; \$16.92 for June, 1920 (the peak); and \$7.83 for September, 1914. Potatoes showed the greatest decline, but sugar, beef and coffee were also lower. Eggs, butter and cheese were substantially higher, while there were smaller increases in pork, lard, bread and tea. Including the cost of fuel and rent with that of foods, the budget averaged \$20.97 at the beginning of September, as compared with \$21.03 for August; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.92 for July, 1920 (the peak); and \$14.33 for September, 1914. Fuel showed little change from the level in August, but was somewhat lower than a year ago. Rent was practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of

Statistics based upon the average prices of 238 commodities in 1913 as 100, weighted according to the importance of the commodities, was higher in September at 154.7 as compared with 153.3 for August; 145.4 for September, 1922; 161.8 for September, 1921; and 256.9 for May 1920 (the peak).

In the grouping according to chief component material six of the main groups were higher. The Animals group showed the greatest advance due to increases in the prices of butter and eggs. The Vegetable Products group was up because of higher prices for sugar, fruit and vegetables, which offset the decline in grains. Increases in the prices of raw silk, raw cotton, jute, and cotton yarns caused an increase in the Textile group in spite of lower prices for cotton fabrics and raw wool. The Wood Products group, the Non-Ferrous Metals group and the Chemicals group were also slightly higher, while the Iron group and the Non-Metallic Minerals group were lower, the former due to declines in the prices of pig iron and steel rails.

In the grouping according to purpose, consumers' goods again advanced, while producers' goods were down. In the former the increase was mainly due to higher prices for foods, such as butter, cheese, eggs, sugar, fruits and vegetables, while in the latter group the lower level was caused by declines in the prices of lumber and in materials for the metal working, meat packing, milling and fur industries.

In the grouping according to origin, farm products and forest products were higher, while articles of marine and of mineral origin were lower.

The index number based upon prices of 271 articles in 1890-1899 as 100, published by the Department of Labour since 1910, stood at 221.3 for September, as compared with 222.7 for August; 220.5 for September, 1922; 232.7 for September, 1921, 356.6 for May, 1920 (the peak); and 141.3 for September, 1914. The most important declines occurred in grains, cattle, beef, hogs, fish, onions, potatoes, jute, oak lumber, copper wire, linseed oil, rosin, window glass and in raw furs. The principal advances were in bran, shorts, butter, cheese, eggs, sugar, raw cotton, raw silk and in turpentine.

The index number published by the Department since 1910 has been reconstructed back to January 1919, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913 (LABOUR GAZETTE, June, 1923, pp. 689-695). Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in its three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

A special index number (comprising fifty of the more important commodities selected from the 271 in the departmental list) including twenty foods, fifteen raw materials and fifteen manufactured goods, based upon price levels in 1913 as 100, declined to 151.6 for September, as compared with 153.0 for August; 145.3 for September, 1922; 150.4 for September, 1921; 229.9 for September, 1920; and 102.9 for September, 1914. Beef, potatoes and glass showed the greatest declines.

The index of wholesale prices in Canada published by the United States Federal Reserve Board including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, stood at 153 for July, the same level as for June, as compared with 155 for May and 154 for July, 1922. Goods imported, goods exported and raw materials were lower, while consumers' goods advanced. Goods produced and producers' goods were unchanged.

The Canadian Bank of Commerce index of exports declined to 153.29 for September from 154.84 for August. The index of imports was also down to 163.59 for September from 164.46 in August. The combined index of both imports and exports fell from 159.65 for August to 158.44 for September.

Professor Michell's index of wholesale prices based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, was slightly higher at 178.8 for September as compared with 178.6 for August. The index for foods was higher while that for manufacturers' goods was lower.

The table of retail prices and rentals shows the prices at the beginning of September of seventy-two staple food-stuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERM OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA.

\*Vinegar sold extensively in bottles at higher prices than in bulk.

case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920,

the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped

†Five commodities off the market, fruits vegetables etc. One line of spelter was dropped in 1915.

from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, including twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the

various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices

Beef showed the first decline in several months. Sirloin steak averaged 29.5c per pound in September as compared with 30c in August. Round steak was down from an average of 24.6c in August to 24.1c per pound in September. Rib roast also showed a general decline from 22.1c per pound in August to 21.5c in September. Shoulder roast averaged lower at 15.4c per pound in September as against 16c in August. The decline was general in all provinces. Veal, roast, averaged slightly higher at 18.4c per pound as compared with 18c in August. Mutton showed little change, averaging 27.9c per pound. Pork, leg roast, advanced from an average of 26.6c per pound in August to 27.2c in September. Prices averaged slightly lower, however, in Nova Scotia, New Brunswick, and Quebec. Mors pork also was slightly higher,

averaging 25.3c per pound in September. Bacon was down from an average of 39.2c in August to 38.9c in September. Ham was steady. Fresh halibut, salt herring, salt cod, and finnan haddie averaged slightly higher. Lard was steady.

Eggs continued to advance, fresh averaging 38.3c per dozen in September, 32.4c in August, and 31.2c in July, and cooking averaging 34c per dozen in September, 28.6c in August, and 27.3c in July. Milk advanced at St. John, N.B., and Winnipeg. Butter showed a general advance, dairy from an average of 34.5c per pound in August to 36.4c in September, and creamery from 39.3c per pound in August to 41.4c in September. Cheese was up in the average from 30.3c per pound to 31.2c, the increase being general.

Bread and soda biscuits showed little change. Flour and rolled oats were steady. Canned tomatoes and peas were unchanged. Onions were down in the average from 8.3c per pound in August to 7c in September. Potatoes averaged lower in September at \$1.99 per 90 pounds as compared with \$2.60 in August, the decline being general. Evaporated apples and prunes were slightly lower, averaging 97.6c per 4 19.6c per pound and the latter 18.4c per pound. Raisins were down from an average of 20.2c per pound in August to 19.9c in September, and currants from 23.6c per pound in August to 23.3c in September. Raspberry jam was slightly lower, averaging 97.6c per 4 pound tin. Canned peaches were down from 31.6c per tin in August to 31.2c in September. Marmalade averaged slightly lower at 80.4c per four pound tin. Granulated sugar declined 1c per pound in the average to 11.3c. Prices averaged lower in most localities. Yellow sugar showed about the same general fall as granulated, averaging 10.8c per pound in September and 11.8c in August. Coffee fell from 54.3c per pound in August to 53.6c in September while tea advanced from 66.9c per pound to 67.9c. Cream of tartar was

down from 69c per pound in August to 67.5c in September.

Anthracite coal averaged \$17.80 per ton in September, \$17.40 in August, and \$17.20 in July. Prices were higher in Amherst, Halifax, St. Hyacinthe, Windsor, Owen Sound, and Winnipeg. Bituminous coal was up from \$11.28 per ton in August to \$11.33 in September, prices being higher in St. John, Three Rivers, Brantford, Windsor, and Cobalt. Hard wood, four feet long, was slightly lower in September at \$12.69 per cord as compared with \$12.80 in August. Soft wood was also lower, averaging \$9.42 in September and \$9.54 in August. Coal oil was unchanged.

Rent was slightly lower at Sault Ste. Marie.

#### Wholesale Prices

The following statement as to the changes in the prices of important commodities during September has been issued by the Dominion Bureau of Statistics.

The fall in grain prices was the most salient feature of the month's prices movement. No. 1 Manitoba Northern Wheat was \$1.19 $\frac{7}{8}$  on September 4, but was as low as 96 $\frac{1}{2}$ c by the end of the month. The average for September was \$1.06 as compared with \$1.13 for August. Oats No. 2 C.W. were 47 $\frac{3}{8}$  on September 1 but ranged between 43c and 44c later. The monthly average was 44 $\frac{1}{2}$ c. Much augmented crop reports current about the middle of the month, which were contemporaneous with the beginning of the great outflow of new grain, inevitably depressed prices in the face of an unimproved European situation. The price of raw sugar 96° centrifugal, moved upward from \$5.57 to \$6.77 per cwt., the increase being due to a very brisk demand in both the United Kingdom and the United States, accompanied by a shortage of immediately available supplies in relation to the demand. Granulated sugar rose in sympathy, being at the middle of the month \$9.64 per cwt., as compared with \$9.02 in August. The rise in the price of shorts from \$28 to \$32 per ton is said to have been due to the new stand-

ards required by the Feeding Stuffs Act. Plentiful supplies and a not always brisk demand brought about further reductions in cattle prices. Choice Western steers were \$5.90 per cwt., as compared with \$6.12 in August, and choice steers at Toronto were \$6.95, as against \$7.10. Fresh meats declined in sympathy with the lower cattle prices of the last two months. Forequarters at Toronto fell from \$8.00 to \$7.60 and hindquarters from \$16.75 to \$15.20 per cwt. A plentiful marketing of hogs brought prices down from the higher range attained in August. Thick smooth hogs were then \$10.23 per cwt., but fell in September to \$9.94. The effect of the higher hog prices obtaining in August was reflected in the September prices of bacon and ham, both of which commodities rose 1c per pound. Seasonal influences were obvious in the higher prices for eggs and butter. Eggs, specials and extras, were 35c to 40c on the 15th of August, but were 40c to 48c the same date in September. Creamery butter at Montreal was 37c as against 32c, and creamery prints at Toronto 41c as against 36c. Raw cotton, upland middling, commenced the month with a spot price of 26 $\frac{1}{4}$ c per pound but rose to 30 $\frac{3}{4}$ c by the 20th, though it declined again slightly and was 29 $\frac{1}{2}$ c at the end of the month. The average was 28.8c for September as compared with 25c in August. Dominating as it does the world's cotton market the reiterated reports of a short crop in the United States, due to adverse weather conditions, damage by boll-weevil and other insect pests, together with a smaller carry-over than last year, were reflected in an upward tendency.

A third year of small crops gives no hope of relief from high prices for cotton raw material, nevertheless in the finished product there have been some reductions due doubtless to seasonal sluggish demand. Gingham, amoskeag, at Toronto fell from 20c to 17 $\frac{1}{2}$ c per yard, and ticking at Montreal was 69 $\frac{1}{4}$ c as compared with 74c in August. The price of raw silk was affected by the earthquake in Japan. Kansai No. 1 was \$7.60 to \$7.70 per pound at the commencement of September. After the disaster in Japan trading in raw silks was suspended in New York for several days but reopened on the 19th at \$10.90 to \$11.00 for the above grade. More reassuring reports as to the extent of damage to stocks in Japan caused the price to ease off and on the 29th it was \$9.90. Quietness in the woollen textile business, due in part to the unsettled European situation, is blamed for lower prices in raw wool. Eastern domestic wool,  $\frac{1}{4}$  blood, fell from 33 to 31c per pound and western range,  $\frac{1}{2}$  blood, from 39c to 37c per pound. The weakness of the European demand for copper and plentiful supplies on this side of the Atlantic have combined to further depress copper prices. Electrolytic copper dropped from \$16.40 to \$16.15 per cwt. Spelter rose from \$8.10 to \$8.30 and lead from \$6.50 to \$6.85 per cwt. Tin rose from 44c to 46 $\frac{1}{2}$ c per pound. The rise in spelter and lead prices was due to much livelier demand in the United States and some portions of Europe. Tin prices were higher because of considerable buying on the part of the United States. The Japanese situation has caused a certain amount of expectation in metal lines.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

---

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Prices in Europe during recent months have displayed varying tendencies, generally influenced more or less by the political situation, the Japanese disaster or by seasonal changes. In Great Britain there were declines in wholesale prices of vegetable foods, advances in animal foods and advances in textiles, while the cost of living showed a steady advance. In Belgium and France prices on the whole were rising, as they were in Sweden. In Norway, Holland and Switzerland prices have not yet shown a tendency to recover from the recent depression. In Bulgaria, Czecho-Slovakia and Austria wholesale prices were still receding in July. In Poland and Germany rapidly rising prices have reflected the unsettled political conditions. Wholesale prices indexes in the United States showed a slight upward turn at the end of the third quarter of the year owing to increases in the prices of textiles and of many farm products. The cost of living according to the latest information available showed a slight recession in the third quarter of the year.

### Great Britain

**WHOLESALE PRICES.** — Unlike the other index numbers of wholesale prices in England that of the Board of Trade showed a slight decline during August, reaching 154.6 on the base prices in

1913 = 100, a decrease of 1.3 per cent from the monthly average for July. The level for foods fell by 1.0 percent and that for industrial materials by 1.4 per cent. The sharpest declines were in cereals, in other foods except meat and fish, and in cotton. The only group in which a rise in prices was shown was the meat and fish group. Other items in the budget showed no change for the month.

The *Statist* index number (in continuation of Sauerbeck's figures) showed at August 31 the level of 125.0, an increase of .2 points or .16 per cent above the level of a month previous. Foodstuffs showed an increase of .3 per cent, due to a rise in the animal food group, vegetable foods and the sugar, coffee and tea group showing declines. Materials rose .1 per cent, textiles rising 1.2 per cent while minerals and sundries showed slight declines.

The *Economist* index number (1901-05 = 100) rose 2.8 per cent during September reaching 195.7 at the end of the month. The chief advance was one of 8 per cent in textiles. Foods other than cereals and meat, and the miscellaneous group advanced slightly. Cereals and meat and minerals showed slight declines.

**COST OF LIVING.** — The index number of foods compiled by the Ministry of Labour, as stated last month, was 168 at September 1, on the base prices in July, 1914 = 100, an increase of 3 points or 1.8 per cent above the previous month's level. Retail prices of eggs, bacon, butter and cheese rose considerably as well as milk and fish. There were declines in the prices of potatoes, sugar and British mutton. At October 1, the cost of living index was 175, foods having risen 4 points to 172, and other items of the budget showing no change.

## Austria

WHOLESALE PRICES. — The official index number of wholesale prices published by *Statistische Nachrichten* continued a downward trend during July and August, reaching the levels 17,210 and 16,380, the base being the unweighted average of relative prices in 1914 = 1. Grains, milled products and potatoes were somewhat cheaper in August. Several articles showed increases but only sole leather showed one of any importance, an increase of 10.4 per

cent. Prices of coal and coke from Upper Silesia were lower at the middle of August than in the previous month, but rose again towards the end of August above the July level.

COST OF LIVING. — The index number of the cost of living of the Paritätische Kommission showed an increase of nearly 3 per cent for the month of August. Food and clothing both showed increases of 1 per cent, chiefly owing to increases in the price of flour, lard and sugar. The heating and lighting group,

owing to a rise in the price of coal showed an increase of 14 per cent. Rents showed no change for the the month.

## Belgium

WHOLESALE PRICES. — The Index number of the Ministry of Industry and Labour rose 20 points to 504 in July, on the base April, 1914 = 100. There was an increase of 4.1 per cent above the level of the previous month. Increases were shown by all groups except resin products and clay pro-

ducts, which showed slight declines. The largest increases were foods, 8 per cent; tar and its products, 10 per cent; metal products, 8 per cent; textiles, 4.6 per cent; tobacco, 26 per cent, and raw rubber, 15 per cent.

RETAIL PRICES. — The index number for the Kingdom (April, 1914, = 100) rose 10 points again in August, to 439, the highest level since January, 1921. The weighted index of 30 foods rose 21 points or 4.6 per cent to 469 in August.

## Estonia

RETAIL PRICES.—The Central Bureau of Statistics publishes a monthly index number of retail prices of foods at Reval on the base prices in 1921 = 100. The lowest point reached by the index was in March, 1922, when it registered 79.9. After that it rose fairly steadily to the peak of 102.3 in March, 1923. The latest figures available are April, 98.9; May, 92.7, and June, 92.3.

## France

WHOLESALE PRICES. — The Index number of the Statistique Générale (prices in 1901-10 = 100) rose from 470.1 in July to 476.6 in August. While industrial materials rose in price by nearly 3 per cent, foods fell by .8 per cent, owing to a rise in the price of animal foods. In industrial materials considerable increases were shown in

per cent in heat and light. Foods increased about 1300 per cent; rent about 590 per cent, and clothing 1540 per cent. This cost of living index number is for 71 localities and is regarded as representative of the whole of the localities with over 10,000 inhabitants. For 29 of the 71 localities, a weekly index number has been reckoned since July, 1923, and published on Wednesday evening to be used in the making of wage calculations on Friday of the same week.

## India

**COST OF LIVING.** — The official index number compiled by the Bombay

Labour Office showed a rise in August of one point above the July level, reaching 154 on the base of July, 1914, = 100. There was a slight rise in food prices due to a rise in jowari and vegetables. Jowari rose 8 points but rice fell 4 points. In other foods, which rose on the whole by 5 points, refined sugar fell 16 per cent, potatoes rose 9 per cent and onions rose 27 per cent. The last two changes were seasonal. Fuel and lighting, clothing and house rent, all showed no change from the previous month.

stics showed wholesale prices in August to have fallen one point below the July level, to 150 (prices in 1913 = 100). The largest decrease was one of  $2\frac{3}{4}$  per cent in the fuel and light group and was due to declines in bituminous coal, crude petroleum and gasoline. Chemicals and drugs, building materials, housefurnishing goods and the miscellaneous group also showed declines. In the group of farm products there was a rise of nearly 3 per cent, due to increases in the prices of corn, rye, wheat, cattle, hogs, eggs, hops and hay. Foods were also higher, and no change was reported in cloths and clothing or in metals and metal products.

The index number of the Federal Reserve Board showed no change for August, remaining at 159, on the base 1913 = 100. Goods produced showed no change, while goods imported fell four points, goods exported also falling four points. Raw material and producers' goods both showed slight declines, and consumers' goods rose two points.

Bradstreet's index number of wholesale prices was \$13.0974 at October 1, a gain of 1.3 per cent over September 1. Four groups declined, seven advanced, and two remained unchanged. Textiles showed the most marked advance, this being due to advances in raw cotton and cotton goods prices, and in the

(a) Figure for previous month. (b) Average for year. (c) Index published quarterly. (d) 15th of capital towns. (g) 15th of month. (h) Four chief cities. (i) January 1913-December 1920, 22 foods.

price of raw silk, this last advance being due to the Japanese disaster. Other groups advancing were provisions, fruits, metals, naval stores, breadstuffs and building materials. The groups to decline were live stock, hides and leather, miscellaneous products and oil. Coal and coke were unchanged, as the advance in anthracite was offset by declines in bituminous coal.

Dun's index number for October 1 showed an advance of 1.5 per cent over the September 1 figure, reaching \$190.827. Prices were thus  $8\frac{1}{2}$  per cent above the level of a year ago. Four of

the seven groups showed advances for the month, namely, breadstuffs, "other food", clothing and miscellaneous, while meat, dairy and garden products and metals showed recessions. The increases were caused in foods by rising prices of cereals and sugar, and in clothing by rising prices of raw silk and cotton.

**COST OF LIVING.** — The official index number for Massachusetts compiled by the Special Commission on the Necessaries of Life showed a decrease of 1 per cent for August from the previous month's level, reaching 159.5 on the

month up to end of 1920; beginning of month thereafter. (e) Beginning of month. (f) Base is average for six. (k) Cost of food budget.

base average retail prices in 1913 = 100. Practically all foods except meats decreased slightly. Clothing increased about 0.5 per cent; fuel and light decreased about 0.1 per cent owing to a reduction in the price of kerosene, although the price of anthracite remained high. Shelter and sundries showed no change.

The retail food index of the Bureau of Labour Statistics showed a decrease of .7 per cent for August as compared

with July, reaching 146 on the base prices in 1913 = 100. Seventeen articles decreased in price, the chief decrease being potatoes and onions, 12 per cent; cabbage, 11 per cent; granulated sugar, 9 per cent; flour and oranges, 4 per cent; leg of lamb and navy beans, 3 per cent. Thirteen articles increased in price, the chief increases being, strictly fresh eggs, 12 per cent; butter, 5 per cent; and pork chops, 3 per cent. Thirteen articles showed no change.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

---

ON another page of this issue the text is given of a judgment recently delivered by the Honourable Mr. Justice Orde in the Supreme Court of Ontario respecting the validity of the Industrial Disputes Investigation Act, 1907. The

three legal decisions which are summarized below relate respectively to a case of Workmen's Compensation in the province of Quebec, to the interpretation of the Employment Agencies Act of British Columbia, and to the legality of a trade union.

**In Quebec neglect to provide employees on dangerous work with protective equipment constitutes an inexcusable fault.**

A workman was employed by the city of Sherbrooke, Quebec, in putting up electric wires. When he was climbing down a pole he touched a live wire and was instantly killed. His mother brought an action against the city for \$10,000 alleging inexcusable fault in not having provided her son with protective clothing and in not having cut off the current before sending him to do this work which was one of great danger. She alleged that the city corporation had in its possession special equipment that would have prevented the accident, but there had been negligence in not providing the victim with it, and he was completely ignorant of it.

On behalf of the city, the plea was made that the foreman had told the plaintiff's son to bring some rubber material with him in order to cover the

live wires, but he had not done so, and he was consequently the victim of his own negligence.

The Superior Court gave judgment in favour of the plaintiff, awarding her \$5,690 with interest and costs. The grounds on which the judgment was based were that the defendant corporation possessed rubber equipment for the prevention of such accidents as the plaintiff's son had met with, but the foreman who knew the danger had allowed him to do the work without providing him with this equipment, and that it was the duty of the city towards its employees to protect them from such accidents.

This judgment was confirmed by the Court of King's Bench on appeal.

*(Quebec — City of Sherbrooke vs. Dame Cinq-Mars).*

**Employment agents in British Columbia may not collect fees from employers for furnishing help.**

Information was laid against an employment agent in British Columbia for charging fees against an employer for sending him a person seeking employment. The magistrate dismissed the case, but an appeal was taken by the Crown

on a point of law by way of a stated case. The question submitted to the Supreme Court of the province was "Was the magistrate right in holding that the provisions of Section 3 of the Employment Agencies Act do not pro-

hibit the collection and receipt by an employment agent of a fee or compensation from an employer for sending a person seeking employment from the city of Vancouver or elsewhere, to an employer at Chemainus or elsewhere within the said province for employment by him?" Section 3 of the Act referred to is as follows:

No person, firm, corporation, or association shall collect or receive, directly or indirectly, any fee or compensation for sending or persuading, enticing, inducing, procuring or causing be sent from or to any place within the Province, to or from any place outside the Province, or between any two places within the Province, any person seeking employment, or for giving or furnishing information regarding employers seeking workers or workers seeking employment.

It was held by the Court that there was nothing in the language confining the operation of the section to collecting or receiving money from the employee. The argument was advanced that Section 3 of the amending act of 1921 (B. C. 1921 chapter 18) which requires private employment agents to make monthly reports to the General Super-

intendent of the Provincial government employment service implied the repeal of Section 3 of the Act of 1919 quoted above. The Court declared that the legislation of 1921 contained no express provision for such repeal, "Unless, therefore, the legislation of 1921 and that of 1919 are wholly irreconcilable, the argument for implied repeal must fail".

In the opinion of the Court both enactments may well stand together. The acts to be reported upon under the 1921 legislation may be done as a matter of philanthropy, or, at any rate, without charge contingent on the relationship of employer and employee being established. This would not prevent employers or employees from keeping up employment agencies provided the payment of such agencies was not contingent on the establishment of the relationship of employer and employees. If such agencies are established, then the reports called for by the legislation of 1921 must be made.

The question submitted was therefore answered in the negative.

(*British Columbia — Rex ex rel McVety v. Joy*).

#### Trade Union declared a legal organization.

In the issue of the LABOUR GAZETTE of last April on pages 277 to 286, there was given the text of a judgment delivered by Mr. Justice Galt in the Court of King's Bench of Manitoba respecting the legal status of the International Brotherhood of Locomotive Engineers. The action was brought by the general chairman and secretary-treasurer of the Canadian Division of the Brotherhood, suing on their own behalf and on behalf of all the members of the Brotherhood, and of all other members of the General Committee of Adjustment of the Canadian National

Railways against a former secretary-treasurer to recover trust monies. The defendant attacked the legal status of the labour organization claiming it was operating in restraint of trade, and moved for non-suit. The defendant's motion for a non-suit was allowed with costs, but a counter claim entered by him was disallowed.

An appeal was taken by the plaintiffs against this judgment and in the Manitoba Court of Appeal the decision of Mr. Justice Galt was reversed and the appeal was allowed with one judge dis-

senting. Under the appeal granted it was contended that on the pleadings and evidence placed before the Court it should not be held in the present condition of the law that the International Brotherhood of Locomotive Engineers was "an organization so tainted with

illegality that the Court would not lend its assistance to recover trust moneys of the Union, unjustifiably withheld by the late treasurer". Judgment was entered against the defendant for \$3,743.63.

*(Manitoba — Chase et al. vs. Starr).*

NOVEMBER, 1923

Number 11

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

**T**HIS issue of the LABOUR GAZETTE contains quarterly articles on unemployment in trade unions, the Employment Service of Canada, fatal industrial accidents, and immigration. There are also a number of special articles on various subjects of industrial interest. These include a report of proceedings of the Canadian Railway Board of Adjustment No. 1 from September 1, 1920, to September 30, 1923, a report of the forty-third annual convention of the American Federation of Labour, and a summary of further reports of the United States Coal Commission. It also contains the text of a questionnaire submitted by the International Labour Office (League of Nations) to the governments of the various States that are members of the International Labour Organization with reference to matters on the agenda of the Sixth International Labour Conference.

### Monthly summary.

The increase in employment shown during August in the reports of the offices of the Employment Service of Canada was continued through September, applications, vacancies and placements being greater in number than at any previous time.

At the beginning of October the percentage of unemployment among the members of trade unions was 2.0 as

compared with 2.2 at the beginning of September and with 2.8 at the beginning of October 1922.

The average cost of the weekly family budget of twenty-nine staple foods was \$10.65 at the beginning of October as compared with \$10.46 for September; \$10.23 for October, 1922; \$11.48 for October, 1921; \$16.92 for June, 1920 (the highest point reached); and \$7.99 for October, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, stood at 153.1 for October as compared with 154.7 for September; 145.9 for October, 1922; 155.5 for October, 1921; and 256.9 for May, 1920 (the peak).

The time loss due to industrial disputes during October was greater than in the previous month and also greater than in October, 1922. Fourteen disputes began or were in progress during the month, involving 2,497 employees, and causing a time loss estimated at 55,994 working days. Corresponding figures for the previous month were 17 disputes involving 1,844 employees and a time loss of 35,237 working days, and for October, 1922, 18 disputes involving 3,240 employees with an estimated time loss of 54,758 working days. At the end of October there were 13 disputes in progress, involving 2,467 employees.

**Proceedings  
under the  
Industrial  
Disputes  
Investigation  
Act.**

Two reports of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, were received by the Department in October.

In one case a minority report was also received.

**Health  
conditions in  
Ontario  
factories.**

The progress of the principles of scientific hygiene in factory management in Ontario is described by Mr. G.

H. Bostock, provincial factory inspector, in an appendix to the Annual Report of the Ontario Department of Labour, which is reviewed elsewhere in this issue. The writer states that many of the larger factories have installed first aid departments equipped with the latest appliances, with a medical man and trained nurse in attendance. They have lunch rooms and cafeterias, cloakrooms and every convenience for their employees. Some of the smaller factories, while not carrying the extensive equipment just mentioned, have facilities for personal hygiene and have committees appointed for the carrying out of any reasonable suggestions made for the comfort of their employees. Employers, he remarks, are learning the lesson that an employee working in comfort and with a mind at ease is far more profitable to him than in the opposite extreme. New ground is gained as often as an old factory is replaced by a modern structure. No factory may be built until the plans have been approved by the architect of the Factory Inspection branch, and the work as it proceeds is superintended by the local inspector. Apart from ordinary sanitation and cleanliness, three main factors in factory hygiene are dealt with by the factory inspection branch, namely, ventilation, dust prevention, and illumination. The standard room space set for each employee is in Ontario 300 cubic feet, and change of air must be sufficient to keep the amount of vitiation below 6 parts per 10,000 parts of

air, as measured by the amount of carbonic acid gas, which is found in excess of the quantity normally contained in pure air, this gas being the principal product of respiration. Although this gas is not the most harmful, yet it bears a fairly constant proportion to more insidious elements in a polluted atmosphere, and forms a convenient index of vitiation. Another problem of ventilation is the proper regulation of humidity, as excessive moisture causes fatigue and inertia to the worker. Inspectors endeavour to secure a standard of humidity between 65 per cent and 70 per cent with the room temperature about 60 degrees Fahr. When conditions differ considerably from this standard the factory inspector has authority to compel the employer to furnish means for rectifying them. Mr. Bostock points out that there is room for improvement in regard to the elimination of dust. "The field is one", he says, "that offers splendid opportunities for greater achievement". Ordinarily, mechanical means such as suction fans, connected hoods and tubes, are required to supplement ventilation, but the means must vary in accordance with the nature, weight, shape, and chemical properties of the particles suspended in the air. In many cases chemical and physical examinations must be made before an installation can be passed as "hygienic". Similar tests are made for the detection of noxious fumes and vapours. The inspectors are continually required to deal with such cases owing to changes in industrial processes. Special surveys are made periodically of the various processes which might be injurious to the health of employees, some of these inquiries being initiated by the employees themselves.

Illumination has lately become one of the most important problems, especially from its connection with industrial accidents, as it is one of the most difficult in factory hygiene to solve. Only in recent years have standards of illumination been fixed for each class of

work. Requirements must not be too rigid, but it is recommended that the illumination at floor level over the working areas of workrooms should not be allowed to fall below 0.25 foot-candles.

**British  
Columbia  
legislature  
in session.**

The Speech from the Throne at the opening of the fourth session of the Fifteenth Parliament of British Columbia on October 29 referred to the "steady betterment in industrial conditions" which was evident in the province during the past year. "The timber industry was never in a more prosperous condition than at present", the Speech declared, "and the outlook for the future is bright". Metalliferous mining plants throughout the Province are being enlarged to permit of greater and more economical production, and many new properties are being developed. On the other hand the coal mining industry of the Province was stated to be in a depressed condition owing to the increased consumption of foreign fuel oil. The more important measures to be brought before the Legislature by the Government include amendments to the Coal Mines Regulation Act and a bill to establish an eight-hour day in certain industries. The provincial Attorney General introduced the first bill of the session, to amend the Factories Act by raising the age of a male "child" as defined in that act from 14 to 15 years, making the age limit uniform for both sexes.

**Employees  
representation  
in B. C.  
Civil Service.**

Amended regulations were recently issued by the Civil Service Commission of British Columbia, under authority of the Superannuation Act of 1921. The provisions of the Act were outlined in the LABOUR GAZETTE for December, 1921 (page 1444). One of the sections provides that any group of government or other employees on deciding to avail themselves of the act, may upon filing a notice to that effect signed by at least

20 per cent of the members of their group, become entitled to elect a representative to act in an advisory capacity to the Provincial Civil Service Commission in the administration of the act as affecting the members of that particular group. Under the new regulations the Commission, when a notice has been filed as required, will request the members of the group concerned to nominate a representative, such nominations to be signed by at least five members of the group, the consent of the person nominated being also shown. If only one candidate is nominated, this candidate is elected, but should more than one candidate appear the Commission will hold an election by a ballot of the members of the group; the elected candidate to hold office until the end of the fiscal year then current. Representatives so elected are expected to call to the attention of the Commission any matter relating to the administration of the Act which may appear to them to be to the advantage of their respective group and to co-operate with the Commission in giving the members of the group information in regard to the administration of the Act.

**Labour  
programme in  
British  
Columbia.**

A deputation representing the British Columbia executive of the Trades and Labour Congress of Canada, shortly after the opening of the provincial legislature, laid before the British Columbia Government a programme of proposed labour legislation. The Government was asked to take steps to give effect to the 8-hour day law and to make it applicable to all industries in the province; to abolish the poll tax; to amend the Workmen's Compensation Act in several particulars; to provide for insurance against unemployment; to require a medical examination of all persons engaged in the preparation of food for public consumption; to support the barbers' licensing bill now before the legislature; to establish the two-platoon

system for firemen; to establish minimum wages for boys; to provide for the posting of fair wage rates in the employment offices; to secure full civic rights for all workers residing in company towns; and to have school text books printed at the Government printing office.

The proposed amendments to the Workmen's Compensation Act were, that the amount of compensation be raised from 62½ per cent to 75 per cent of the average former earnings or of the difference in earning power of the injured worker before and after the accident; that there should be a medical board of appeal; that cases of hernia and strain should be specially dealt with; that the act should be broadened to cover cases of sickness due to occupation, and its scope enlarged to include casual labourers.

Commission to  
inquire into  
industrial  
unrest at  
Sydney, N.S.

The Royal Commission that was appointed by the Dominion Government in September to inquire into the cause of industrial unrest among the steel

workers at Sydney, N.S., and the circumstances attending the calling out of the militia, arrived at Sydney on October 30. It held its first session there on the following day, and continued to hold sessions at Sydney during November. The Commission, to which reference was made in the October issue of the LABOUR GAZETTE on page 1,052 is composed of Dr. James W. Robertson, C.M.G., chairman, and Messrs. J. J. Johnson, K.C., Charlottetown, P.E.I., and Fred Bancroft, Toronto. Prior to its departure from Ottawa the Commission authorized the following statement with reference to its conception of its scope and duties:

The Commission was appointed to make inquiry into the cause of recurring industrial unrest among steel workers at Sydney, N.S., and the circumstances which occasioned the calling out and retention of the Militia and to make such recommendations as in its opinion may serve to promote amicable rela-

tions between the employers and employees and to remove or lessen the unrest.

The Commission understands that its attention is to be given particularly to three main points, viz: (1) the cause of such recurring industrial unrest, (2) the circumstances which occasioned the calling out of the troops, and (3) recommendations which may serve to promote amicable relations between the employers and employees.

If in the course of the inquiry it should appear that any condition or action in respect to coal miners or any others in the locality was, to a material degree, a part of the cause of such unrest among steel workers or formed part of the circumstances which occasioned the calling out of the troops, then it would obviously be the duty of the Commission to inquire into the nature, extent and cause of such condition or action.

Since the Commission is directed to give its attention to the recurring nature of the industrial unrest, the Commission will devote some time to the duty of acquainting itself with the records of previous inquiries into similar situations and with some parts of the history of industrial relations which have a direct bearing upon the present inquiry.

The Commission intends to begin its sittings for the purpose of taking evidence at Sydney on Wednesday, the 31st October, and will stay there as long as may be necessary to make a thorough investigation.

Minimum wages  
in British  
Columbia.

Revised orders of the Minimum Wage Board of British Columbia governing the wages and hours of labour of female workers in the manufacturing industry were published in the British Columbia Gazette during October. The minimum rates for both experienced and inexperienced workers are as stated in the LABOUR GAZETTE for August (page 822), where an account was given of the conference held in Vancouver last July between the Board and representatives of the parties concerned. The rules governing the wages and hours of labour for inexperienced workers, however, do not apply to regularly indentured apprentices whose indentures have been approved by the Minimum Wage Board. The new orders, which supersede orders issued in September, 1919, will come into force during December.

# Quebec labour commission in session.

The first regular meeting of the commission appointed in the province of Quebec under the authority of an act passed at the last session of the provincial legislature to enquire into workmen's compensation systems and other labour subjects, was held early in November at Quebec, Que. The commission decided to send out a list of questions to persons representing all the classes interested in the inquiry. The next official meeting, it is stated, will be held at Quebec on December 18, when it is expected that answers to these questions will have been received, which will form the basis for further inquiries. The commission will sit later at Montreal, Sherbrooke, St. Hyacinthe, Three Rivers, Hull, Shawinigan, Chicoutimi and other industrial centres. The names of the members of the commission were given in the last issue of the LABOUR GAZETTE (page 1054).

# Vital statistics of Canada.

The first comprehensive annual report on vital statistics to be issued for Canada has recently been completed by the Dominion Bureau Statistics. The statistics were collected and compiled under a cooperative arrangement between the Bureau and the provincial registration departments. This arrangement was made at a conference held in 1918, when a model bill was drafted to form a basis for uniform vital statistics in the various provinces. Quebec has not yet adopted the principles of this model bill. The vital statistics of that province are based on a different system of returns and therefore cannot be included in the new tabulations. It is to be regretted that the present volume is necessarily incomplete for this reason. It is possible, however, that this condition may soon be remedied, for according to press reports a bill is likely to be introduced at the forthcoming session of the Quebec legislature requiring the present keepers of civil registers to make monthly

reports, which would furnish vital statistics comparable with those of the other provinces of Canada. The preface to the present report points out that "it is unnecessary to emphasize the importance of vital statistics and of their co-ordination on a national basis. Not only are they needed in the prevention of crime and in facilitating the transfer of property, but they lie at the basis of public hygiene and of all study of the most important asset of any community — the people. With the census (which is the national stocktaking), and migration statistics (which record the changes through movement into and from the country, as vital statistics record the changes due to natural causes), they complete the general scheme of population statistics".

# Co-operation in the British Isles in 1922.

Statistics of co-operation in Great Britain and Ireland in 1922 compiled by the Co-operative Union show that at the end of the year there were 1,321 retail distribution societies, being 31 fewer than at the end of 1921. Nineteen had gone out of existence and twelve had amalgamated with other societies. There was a total membership of 4,519,162 at the end of the year as compared with 4,548,557, the heaviest decreases being in the western and Irish sections. Share capital amounted to £73,071,598, being £1,747,204 less than at the end of 1921. The reserve funds of these societies amounted to £4,942,574, a decrease of £261,700. The total net profits amounted to £10,671,230 or £3,582,441 less than for the previous year. The productive societies increased by three. Their share capital which amounted to £1,586,487 showed an increase of £57,285, their loan capital amounting to £1,352,299 decreased by £10,243 while this trade was reduced by £1,262,510, amounting to £5,318,077 in 1922. The membership of the Irish Wholesale Society remained stationary, but there was a slight reduction in the membership of the Co-operative Wholesale Society and in the

Scottish Wholesale Society. The distributive trade of the Co-operative Wholesale Society was £65,904,812 a decrease of £16,036,870. and of the Scottish Co-operative Wholesale Society £17,009,251, a decrease of £5,031,907. These two societies show decreases in the total value of their productions and in the ratio of their productions to their distributive trade, but in proportion to the sales of the retail societies there was a slight increase of .03 per cent for the societies combined. The total number of employees in all societies was 183,195 or 4.05 per cent of the membership. Of these 41.25 per cent were engaged in production and 58.75 in distribution, the total wage bill being £25,586,278.

**Fishermen's  
co-operation  
in Quebec.**

Co-operative societies of fishermen have been organized at L'Anse aux Gascons and New-

port, Quebec, under the act passed at the last session of the Provincial Legislature (1922, second session, chapter 36) to assist the development of the fisheries of the Province. The act created a Maritime Fisheries Bureau as a branch of the Department of Colonization, Mines and Fisheries, the superintendent of the Bureau being charged among other duties to see to the creation of fishermen's co-operative associations, their organization and operation; to supervise the preparation and inspection of fish and to furnish fishermen and fishermen's cooperative associations with all the necessary information for the preparing, keeping, transporting and placing of fish on the markets. The purpose of the new co-operative societies is to render their members independent of companies in regard to the prices obtained for fish and the cost of supplies. They are authorized to purchase rigging, boats and all articles necessary or useful to fishermen, to buy, sell, transform, transport and place fish on the market, to erect storage and other buildings as required, and to establish canneries. No member

may have more than 100 shares, the value of each share being \$10, and each shareholder may have only one vote at meetings of the association. After providing for a reserve fund dividends up to six per cent may be paid on capital, the remainder of the profits being divided among the members in proportion to their dealings with the association.

**Merit system  
in Alberta  
Civil Service.**

The Civil Service Association of Alberta held conferences during November with the

Provincial Civil Service commission at Edmonton, to consider a proposal to establish a system of "efficiency rating" for the service. The object of such a system is "to define the ability and efficiency of every employee and to award a grading and salary in accordance with the value of the services rendered, the basis of advancement to be merit". To determine efficiency ratings it is proposed to award merit or demerit marks, computed monthly or quarterly, such marks to be recorded on the efficiency rating card of each employee. If the total number of marks for a month or a quarter is limited to ten, the plan would award one merit mark for each of the following qualities: honesty, loyalty, character, courtesy, sobriety, punctuality, discipline, accuracy, ability for present duties, exceptional ability warranting promotion.

**Conditions  
in building  
trades in  
United States.**

A survey of conditions in the building industry in the United States compiled from data gathered at the convention of the Building Trades Department of the American Federation of Labour at Portland, Oregon, was made public on October 13. The survey states that in some building trades still higher wage scales can be expected with a continuation of present activities. All building labour is employed at the present time. The number of apprentices is increas-

ing rapidly and the attitude of the majority of organizations was favourable to the removal of all restrictions. The advent of these apprentices was expected by labour leaders to be a factor in stabilizing wages in the next two or three years. Stabilization of the industry to mitigate the evils of labour migration and seasonal employment was urged, and it was also urged that building activities be kept going normally rather than that there should be an effort to make up the present building shortage through abnormal activities over a short period. It was hoped that the construction of public buildings not immediately needed would be deferred and that efforts be concentrated on the building of dwellings with a view to avoiding the continual upward tendency of rents.

Jurisdictional strife in the building trades was reported to be largely eliminated, and the national board of jurisdictional awards had been instructed to make an immediate settlement of the controversy between carpenters and metal workers. The wage scales which were submitted to the convention showed that labour was receiving the highest wages in history, and it was stated that many workmen were receiving bonuses of from one dollar to four dollars per day in addition to their regular wage scales.

#### Night work in bakeries.

The subject of night work in bakeries is one of the matters to come before the Sixth Session of the International Labour Conference (League of Nations) which will meet in June, 1924. The International Labour Office has sent a questionnaire on this subject to the governments of the fifty-five states members of the International Labour Organization. The questions asked are given on another page of this issue. The introduction to this questionnaire contains a historical survey of the extent to which the prohibition of night work in baking has already been put into operation in various countries, and reviews the different points which may

be taken into consideration by the conference. Night work in bakeries was suppressed for the first time in Norway in 1906. Since then seventeen other countries have passed laws dealing with this matter. As regards the undertakings covered by the legislation, as a general rule only those bakeries and pastry making establishments which are worked as independent undertakings are subject to the prohibition of night work. The length of the period fixed for the nightly rest varies greatly from country to country. The longest period is fourteen hours in Sweden, and the shortest is six hours in France and Spain.

#### Female and Child labour in India.

A bulletin recently published by order of the Government of India (No. 31, *Women's Labour in Bengal Industries* by Dagmar F. Curjel, M.D. (Glas.), D.P.H. (Camb.), *Women's Medical Service, India*) gives the average daily number of persons employed in all industries registered under the Indian Factories Act as adults 1,195,551 (1,007,955 males and 187,596 females) and children 68,107 (56,920 males and 11,187 females).

Over half the child labour was employed in the Bengal industries, there being 29,235 children employed in the jute mills, 2,152 in the cotton mills, 595 in the coal mining industry, and 1,051 in other industries on the coal fields, and many were employed with their parents in the tea industry. Women form about one-quarter of the average daily workers in the jute mills and about one-fifth in the cotton mills, and in the coal mining industry the proportion of women to men underground is about two to three. The average woman worker in a jute mill receives a weekly wage of Rs. 2-8-0. In cotton mills, the rate of wages is lower on the whole and women who are employed on the less skilled and lower paid processes tend to leave and take up better paid temporary work during the period jute presses are running, return-

ing later to the cotton mills when the other work ceases. The management of the cotton mills usually retain two or three weeks' wages in arrears, while in the jute mills they usually keep one week's wages. In the coal mines a woman's pay for a day's work varies from 8 to 12 annas, and it is stated that they usually spend from five to eight hours down in the mine, their work being mainly the carrying of coal to the containers or tubs. In the jute mills, except in the immediate neighbourhood of Calcutta, a multiple shift system was the rule and the actual number of hours worked daily by women under the shift system in the preparation department was said to vary from 9 to 11 hours. In some mills where the hand-sewing department was partitioned off from the factory women were working twelve hours a day on piece work as finishers to earn a daily average wage of from five to six annas. All cotton mills work a one-shift day; the woman worker has an 11-hour day, with a mid-day interval during which she usually returns to her own home. In the jute and cotton mill areas, according to the report, "it did not appear possible for single workers to live and maintain themselves on an adequate diet under five annas a day. The average wage received by a child worker was about Re. 1.10 weekly in the jute mills and rather less in the cotton mills. The majority of the child workers showed evidences of malnutrition and of physical strain. In the jute mills their work as winders involves spurts of great activity, and also the carrying of loads of fairly heavy bobbins. Although the amendments to the Factories Act which came into effect in July 1922 (see LABOUR GAZETTE, June 1922, page 509), raise the age at which children can be employed in mill work from 9 to 12 years, the upper age limit being raised simultaneously from 14 to 15 years, it is stated that the rule does not apply to children enrolled by mill authorities before 1922. Under the multiple shift system in the jute mills,

children were found to be working in areas where two or more mills are adjacent in more than one mill on the same day (the maximum hours under the Factories Amendment Acts being 6 a day). Each mill retains in its possession a certificate from the Certifying Factory Surgeon for each particular half-timer, but they appeared to have little difficulty in obtaining another certificate under the same or under a different name from the same surgeon. Children were also found helping their mothers or relatives in the hand-sewing department, when their own period in the factory was completed. In some jute mills where the hand-sewing department is separated by a partition from the factory, it is customary to allow young children, who are under age, to sew alongside parents or relatives to whose account the work done is credited.

**List of  
unhealthy  
processes.**

The Industrial Health  
Service of the Interna-  
tional Labour Office  
(League of Nations)

has recently undertaken the drawing up of a list of unhealthy processes in industry, a matter which was referred to the Office by the Washington Conference of the International Labour Organization. The information will be published in the form of an encyclopaedia. A special article will include a general consideration concerning industrial hygiene, toxicology, industrial welfare (protection against disease, medical assistance, individual health, first aid, etc.) Each article will deal with the technical aspects of the problem, together with information on industrial pathology, special health measures and legislation regarding each process or industry classified as unhealthy or dangerous. The Office is taking steps to obtain the collaboration not only of the members of its Advisory Committee on Industrial Hygiene, but also of the most eminent experts of various countries. More than thirty scientists have so far assured the Office of their assistance in the preparation of

about one hundred articles dealing with the most important industrial poisons and unhealthy processes.

#### Profit-sharing in France.

The French Ministry of Labour has published a report on profit

sharing (*Enquête sur la Participation aux Bénéfices*) containing the results of an enquiry which was undertaken in anticipation of this subject being discussed in the French parliament during the November session. The report is divided into two parts dealing respectively with profit sharing consequent upon existing legislation and profit sharing consequent upon private initiative. Three acts are described one of which, passed in December, 1915, made profit-sharing compulsory for workers' cooperative production societies. Information is given of 328 such societies, employing 12,000 workers, of whom about one-half are members. The share in profits varies from 25 to 75 per cent being generally from 25 to 30 per cent. Profits distributed in 1920 by 195 societies amounted to 3,896,458 francs divided among 9,230 workers, the average shares of such worker employed ranging from 110 francs in societies engaged in the clothing industry to 1,000 in glass and porcelain societies. An act of 1917 permitted the creation of joint stock companies with labour copartnership features. Eleven companies have been established under this act. By an act of 1919 profit-sharing is made a condition of all future mining concessions. There have been granted 51 such concessions. After interest on capital has been paid, the State and staffs share in the profits on a scale laid down in the concession. Of the establishments which had voluntarily introduced profit-sharing schemes particulars were received of 62, nine of which however made no profits in 1921. The remaining 53 employing 36,500 workers distributed 25,743,000 francs among 20,415 workers, an average of 1,260 francs for each participant. It is said that profit-

sharing on the whole appears to be on the decline, the number of schemes having been estimated at 145 in 1893, 88 in 1901, and 53 effective schemes in 1921.

#### German trade boards for outworkers.

On June 27, an Act was passed in Germany increasing the powers of trade boards for the protection of outworkers which had been established under the Outwork Act, December 20, 1911. The original boards had only powers to investigate and report on prevailing conditions and to give advice and assistance in the preparation of new wage lists and conditions. In addition to these functions they now have power to fix minimum wage rates for outworkers, when they are deemed necessary, inadequate rates being defined as rates which do not permit a worker in normal working hours to earn wages customary in the locality, or which are lower than the rates for similar work in other localities. Provision is made for fixing rates common to several trade board districts in order to avoid unfair competition.

After the charter of District 26 of the United Mine Workers of America had been revoked last July on the refusal of the district officers to call off a strike, the provisional president obtained an interim order restraining the deposed officers from functioning as an executive board of the United Mine Workers and from using certain monies deposited in the bank to the credit of District 26. This order was continued on September 8. On October 9 the order was discharged in the Supreme Court when a motion made by the counsel for the deposed officers that it be discharged and vacated was granted. The counsel for the provisional president stated he would not oppose the motion having filed a discontinuance of it some days previously.

It has recently been announced that a tract of land, comprising 700 acres, has been purchased in Florida by the United Brotherhood of Carpenters and Joiners of America, for the purpose of converting it into a fruit farm for aged members of the craft. This brings to a conclusion plans and negotiations that have been going on for several years, and on which three referenda have been taken by the membership. It was one of several suggested pension schemes. It is intended that the proposed fruit farm will be made self-supporting. Pensions will be paid to members who do not choose to enter the farm. The monthly payment will amount to about \$25.

During October the Minimum Wage Board of Ontario held a public hearing on a proposed order fixing a minimum wage for female workers engaged in establishments for the manufacture of electrical supplies. The minimum rates in this industry as in the other industries covered by existing orders will vary according to units of population.

Professor J. M. MacMillan, chairman of the Minimum Wage Board of Ontario, in a speech at Toronto on November 5, stated that he had never been called upon, as chairman of the Board, to cast a deciding vote in any case of deadlock between the representatives of the two parties. A spirit of compromise and a general recognition of the reasonableness of all proposals made regarding a living wage had, he claimed, marked the proceedings of the Board.

The Montreal Tramways Company and the Montreal Tramways Union are reported to be considering the details of a proposed pension scheme which would provide pensions, sickness and other benefits for about 3,500 employees of the Company. It is understood that the employees are to be required to contribute a small percentage of their earnings, the Company paying the balance of the amount required. The fund so obtained would be administered by a Commission, on which the employees

would be represented. The proposed plan has been under consideration since 1920, when the last wage agreement was made between the Company and its employees. (LABOUR GAZETTE, October, 1920, page 1383). The pension proposals are in connection with a new wage agreement.

A serious increase in the number of industrial accidents in Ontario during the present year is noted by the Workmen's Compensation Board of the Province. The total for the first ten months was 51,002, exceeding by 581 the number of accidents in the entire year 1922. During October 6,416 accidents, including 40 fatalities, were reported to the Board, this being greater by 584 than the highest recorded number of accidents in any single month since the coming into force of the Workmen's Compensation Act. The amount of benefits awarded by the Board during October was \$555,638.73, of which \$488,092.01 was compensation, and \$67,546.72 was for medical aid.

The Montreal Association for the Blind passed resolutions at their recent annual meeting asking the government of Quebec to supplement the wages of the blind by an adequate allowance, and in view of the increased cost of training the blind, to make an annual appropriation of not less than \$400 for each pupil under tuition by the Association, and a similar grant for each apprentice in the workshops for a period of three years. The association has lately established a department in the industrial home for machine knitting.

A league for Sunday observance has been organized in the province of Quebec, its members undertaking to abstain from gainful occupation on that day, and from causing others to be so employed; to discourage attendance at theatres on Sundays, and generally to conform to the spirit of the Sunday laws. The authorities, provincial and municipal, are to be urged to take all necessary measures to secure Sunday as a day of rest.

Sunday labour has recently been abolished at the plant of the Saint-Lawrence Sugar Refineries Company, Montreal.

A "Child Welfare Clinic" has been licensed and registered at Sherbrooke, Quebec, as a charitable association, for the purpose of making provision for medical, surgical and dental aid for children whose parents are too poor to make such provision. Funds for the work of the clinic will be obtained by voluntary contributions from the members or the public.

Resolutions seeking co-operation and educational methods in lessening Canada's fire hazards were dealt with at the recent Fire Marshals' convention at Winnipeg. The organization of fire prevention committees throughout the Dominion was recommended, the plan outlined being similar to that of the Fire Prevention League of Ontario. Another resolution endorsed asked the Dominion government to remove or substantially reduce the tax on "safety" matches. Educational plans to be carried on in the schools in the prevention of fire and suggestions of uniform regulations for the handling of gasoline were also considered. It was decided to seek for new federal legislation to give wider powers in the prosecution of cases instigated by the provincial fire officials.

The Hotel and Restaurant Employes' International Alliance and Bartenders' International League of America at their recent convention in Chicago decided to increase the amount of death benefits from \$50 to \$75. They also decided in favour of the creation of a food department within the American Federation of Labour, and endorsed the position of the Federation in the following: "Opposition to Fixing Wages by Law"; "Immigration"; "Injunctions"; "Non-Partisan Political Campaign"; "Political Prisoners"; "Unemployment Insurance". They also were in favour of a study of old age pensions and workmen's compensation laws, and the modification of the Vol-

stead Act and the manufacture and sale of light wines and beer for beverage purposes.

The U.S. Interstate Commerce Commission, recently approved a profit-sharing scheme adopted by Henry Ford for employees of his railroad, the Detroit, Toledo and Ironton. The corporation was authorized to issue \$1,000,000 in certificates of indebtedness to be distributed among employees according to the terms of the scheme, and to bear a varying interest charge, depending upon the profits of the railroad. The plan is said to be similar to others now in operation in the Ford enterprises.

An account of the activities of the employees' benefit society founded at Trail, B. C. about three years ago by employees of the Consolidated Mining and Smelting Company of Canada, appeared in the LABOUR GAZETTE for February, 1922 (page 118). The society is conducted by the workers themselves, its officers being chosen by them from their own ranks. It is stated that at the present time there are between 650 and 700 members of the society. The number of members varies owing to fluctuations in employment, but all regular employees are members. During the past year 291 sick claims amounting to \$4,818.25 were paid to 124 members, leaving a net profit on the year's transactions of \$400.80, bringing the funds in hand up to \$1,338.80.

Mrs. Mary Ellen Smith, M.L.A., Vancouver, reported on her return from Great Britain, where she has been investigating emigration possibilities on behalf of the Canadian government, that special schools in housekeeping and household crafts have been organized throughout the country and are being attended by possible girl emigrants to Canada. Other girls are studying poultry farming and truck gardening with the object of coming out to Canada as agriculturalists.

The farm of Craighielina, near Paisley, Scotland, was formally opened recently

by Dr. Crossar as a training centre for city boys who desire to go on the land in the overseas dominions. Since last autumn, it is announced, 90 boys have gone from the farm to Canada.

Discussing the question of night shifts in the mining industry in the United States the *Engineering and Mining Journal Press* (New York) concludes: "Considering mining as a whole there is, we believe, a growing tendency to do away with night work, and incidentally Sunday work, in many departments of the industry, for the one good, sufficient, and unsentimental reason that it means more dollars of profit in the long run."

Lieutenant Colonel G. R. Lane-Fox, Secretary for Mines of Great Britain, announces that, in order to encourage the production of a safe and efficient type of electrical storage battery locomotive for use underground in coal mines, and with a view to displacing pit ponies in deep and hot mines, Mr. Charles Markham, colliery director of Ringwood Hall, Chesterfield, has placed at his disposal the sum of £1,000 to be offered as a prize for the best vehicle which fulfils certain specified conditions. Prominent British mining authorities are acting as judges, including the president of the Miners' Federation of Great Britain, and with the co-operation of the Chief Mines Inspector have drawn up the conditions of the contest. The competition opened to manufacturers of any nationality on October 1, 1923, and will close on a date within six months as the judges may determine. Working trials, in England, will subsequently be arranged for any vehicles which are selected for test.

On October 15, a State-wide referendum was taken in Maine to determine whether or not the 54-hour working week for women and minors should be superseded by a 48-hour week. The measure was sponsored by labour unions and the State branch of the

American Federation of Labour and was opposed by an organization known as the Associated Industries of Maine. It was defeated by a large majority. It is stated that three other New England States, New Hampshire, Vermont and Rhode Island, earlier in the year rejected bills to restrict the hours of labour for women and children.

The Washington Bureau of Statistics recently issued a report on work being done by women employed in the States, which shows that increased numbers of women have enrolled in many and varied occupations since the last survey was taken in 1910. The occupations range from farmers, including dairying and the "farm sidelines", to operators, officials and managers of mines; mechanical, electrical and civil engineers, architects, designers and draftsmen, engravers, chauffeurs and dentists. The greatest increase was in clerical positions and transportation. In 1922, there were approximately 210,000 women engaged in the various subdivisions, water, road, railway and street transportation. The report states that the skilled building trades are as yet untouched by the women, and are the last stronghold of the men.

Under a "Revolutionary Decision" of the Greek Government, dated August 20, 1923, all legally recognized trade unions and trade union federations are declared to be non-existent on and from the date of the decision, and are to be dissolved by Royal Decrees on the advice of the Greek Government. The public prosecuting authorities are to take over all trade union archives, books and registers, and their funds are to be deposited, under the care of the same authorities, with the National Bank of Greece, in an account in favour of the Workers' Provident Fund. Legally recognized workers' benefit societies are excluded from the scope of this decision.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation, Strikes, Prices.

#### The Labour Situation

THE volume of employment at the beginning of October as indicated by firms reporting to the Dominion Bureau of Statistics declined slightly as compared with September 1. The situation, however, continued to be better than at the same period of last year. At the beginning of October the percentage of unemployment among the members of trade unions was 2.0 per cent as compared with 2.2 per cent at the beginning of September and with 2.8 per cent at the beginning of October 1922.

Reports from the employment offices showed a substantial increase in the volume of vacancies offered in September while applications and placements were approximately the same as in the previous month.

The following is the employment situation as reported by the Superintendents of the offices of the Service at the end of October 1923.

Employment in the Maritime Provinces remained much as previously reported. Several apple pickers were sent to the Annapolis Valley from Halifax. The construction group showed considerable activity, although municipal road projects were nearing completion. A few labourers were transferred for work on railways to points in North Western Ontario. Logging operations were underway with a brisk demand for experienced workers. Longshore work at Chatham was reported as fair.

In the Province of Quebec the demand for bushmen was very active, a great excess of vacancies being reported at all the offices. Owing to the slackening of employment in other industries an increase in the number of applicants for this work was noticeable latterly. Calls for building labourers and tradesmen were very

good and applicants were available in larger numbers. The season's work on road and highway construction was nearing completion, but as yet numbers of workers were placed in this group. A slight lessening in employment was noticed in the manufacturing industries, although in Montreal and Quebec boot and shoe workers were required, paper workers were in demand at Three Rivers, while at Montreal the metal trades absorbed a number of men. There was a number of requests for stevedores and freight handlers in Montreal, while in the other larger cities the number of casual vacancies reported was increasing slightly.

The labour situation is bright throughout the Province of Ontario, the predominating demand being for experienced bushmen and for railway construction labourers. The agricultural situation was very little changed, general farm hands and dairy workers being required in the Western Peninsula. Activities in the building and construction groups continued very brisk and skilled building mechanics were required in considerable numbers. Highway and road work absorbed a number of labourers as contractors were anxious the work before the frost set in. Railway extension work, transmission lines construction, and power house erection near Cobalt, North Bay, Timmins and Sudbury, employed many workers. The demand in the logging group increased considerably, especially in the vicinity of Port Arthur, Fort William, Sault Ste. Marie and Ottawa. Slight slackening was reported in manufacturing centres, few offices reporting a surplus of factory labourers. At Chatham there was a call for sugar beet and tobacco workers and at Peterboro, there were requests for weavers and spinners.

In Manitoba the demand for workers for fall ploughing was still very keen, though less than previously reported. Many labourers, carpenters, painters and plasterers, were required and placed, though a decline was noticeable in the construction group. Difficulty was experienced in meeting the demand in the logging group owing to the number of men at present occupied at the harvest. A large number of bushmen were sent to points in Ontario.

In Saskatchewan the demand for harvesters and threshers showed a slight contraction, but in many localities numbers of workers were still required. Vacancies for men for fall ploughing were registered at all the offices. Extra gang hands and labourers were placed with the railway companies in considerable numbers while the erection of homes and public buildings gave employment to several carpenters and inside finishers. A growing demand for bushmen was reported, but difficulty was experienced in filling the orders owing to the number of men at work in the harvest fields.

The calls for harvesters were still fairly numerous in Alberta, with a sufficient supply of applicants to meet the demand. Requests for building tradesmen and labourers were received in increasing numbers, while many labourers for construction and maintenance work on railways, roads and highways, were placed. The demand for bushmen and tie makers showed considerable expansion. Indications are that a very heavy call will be felt in this group during the coming month.

Considerable construction was under way in British Columbia, the calls for carpenters, plasterers, painters, masons and bricklayers, being received at the larger centres. Irrigation work at Penticton and Vernon, and bridge building and road construction work throughout the Province, employed a number of labourers. Renewed activity was reported in the logging group and the placement of bushmen forms a large

part of the work of the Northern offices. The demand for permanent household help was very great, with a scarcity of experienced workers.

**EMPLOYERS' REPORTS.** Further small declines in employment were indicated in reports furnished the Dominion Bureau of Statistics by employers of labour at the beginning of October. The losses were largely due to continued curtailment of operations in construction, particularly on highway construction and maintenance. These contractions were supplemented by pronounced decreases in automobile and other iron and steel works, in saw mills, creameries and fish canneries. On the other hand, logging and transportation absorbed decidedly greater numbers of workers, and improvement was indicated in mining, trade and communication. In addition recovery was reported in leather, flour, chocolate, confectionery, cotton, garment, tobacco and chemical factories, while fruit and vegetable canneries also increased their working forces. The tendency in all provinces except Quebec was downward. The most severe decreases were reported in Ontario, where some automobile factories laid off a large part of their staffs. In the Maritime provinces heavy declines in railway construction were partly offset by increases in railway operation and other industries. The shrinkage in British Columbia was general, while that in the Maritime provinces was largely confined to saw, cotton and rolling mills, railway transportation and construction. Varying conditions in Quebec resulted in a net increase. Leather, confectionery, cotton, garment and tobacco factories, logging and water transportation showed substantial increases in the number of persons employed, but there were considerable contractions in construction, saw mills and rubber works. Employment in Montreal was very much better than at the beginning of September; the greatest improvement occurred in water transportation, while tobacco and textile works were much more

fully employed. In Toronto a slight increase in activity was shown, chiefly in textile and printing plants, on telephones and in wholesale trade. Conditions in Ottawa were very similar to those indicated at the beginning of September, but there was on the whole a small decline in employment, of which the greater part was recorded in paper mills, iron works and in road construction. The tendency in Hamilton and Winnipeg was downward, mainly on account of contractions in wire works in the former city and in printing shops in the latter. Shipping and stevedoring in Vancouver employed fewer men than at the beginning of September, and canneries, also, were less active. The level of employment in the manufacturing division was lower than in the month before, although some industries recorded improvement. As mentioned above, there were very heavy losses in automobile and railway car works, while saw mills continued to release large numbers of men. Fish canneries, butter, cream, rubber, brick, electric current, petroleum, lead, tin, zinc and copper works and rolling mills were not so fully employed as at the beginning of September. The construction industry reported marked curtailment, particularly in the construction and maintenance of railroad beds in the prairie district, Quebec and Ontario. Summer hotels also registered seasonal losses. On the other hand, leather, fur, flour, chocolate, confectionery, garment, cotton, tobacco and chemical plants and fruit and vegetable canneries reported the addition of many workers to their payrolls. Logging camps were decidedly busier, although their activity in some cases was curtailed by inability, owing to harvest demands, to hire their complement of men at the present time. The mining, communication, transportation and trade industries also showed substantial improvement. The volume of employment afforded in nearly all industries was higher than during the corresponding period of last year and of 1921.

An article elsewhere in this issue gives in some detail the employment situation at the beginning of October.

#### TRADE UNION REPORTS.

The improvement in the trade union situation which began in the early spring of this year and continued throughout the summer was also shown by the returns tabulated from trade unions at the close of September. The reports which were received from 1,475 labour organizations with an aggregate membership of 151,461 persons showed that 2.0 per cent. of the members were out of work at the end of September as compared with 2.2 per cent at the close of August and with 2.8 per cent on September 30, 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month). More employment than in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organization reporting). More employment than in August was afforded workers in Ontario, Manitoba and Alberta, the change in Ontario being nominal in character. In Manitoba the improvement was due for the most part to greater work for steam railway employees, and in Alberta, to more activity for coal miners and building and construction workers. In the remaining provinces very slight increases in unemployment were shown. In comparison with the returns for September of last year New Brunswick, Quebec and British Columbia unions were more fully engaged. Unions in Ontario, Manitoba, Saskatchewan and Alberta reported slightly larger percentages of unemployment, and in Nova Scotia no change was recorded. In the manufacturing industries, as reported by 407 unions with an ag-

gregate membership of 45,754 persons, employment remained on the same level at the end of September as at the close of August, but in comparison with September of last year improvement was registered. More favourable conditions than in August were reported by furniture, garment and glass workers and printing tradesmen, but the improvement was counterbalanced by reduced activity among textile and iron and steel workers and metal polishers. In the iron and steel division of the industry blacksmiths, boilermakers and sheet metal workers were slightly more active but employment for machinists, moulders and patternmakers was on a slightly lower level and railway carmen reported no change in the situation. The coal fields of Nova Scotia reported a less favourable situation than in August; a higher level of employment was maintained in Alberta, and in British Colombia no idle members were reported. Quarry workers in Nova Scotia were fully engaged as were also asbestos miners in Quebec. Returns tabulated from 177 unions in the building trades showed that 4.3 per cent of the members were unemployed as compared with 5.5 per cent at the close of August. Bricklayers, masons and plasterers, carpenters and joiners, granite and stone cutters, plumbers and steamfitters and tile layers, lathers roofers, reported small percentages of unemployment. Steam shovel and dredgemen, bridge and structural iron workers, electrical workers, painters, decorators and paperhangers and hod carriers and building labourers were not so active. In comparison with September of last year a higher level of employment was shown by steam shovel and dredgemen, bridge and structural iron workers, electrical workers, granite and stone cutters, painters, decorators and paperhangers and tile layers, lathers and roofers, but in the other divisions of the group slightly larger percentages of idleness were shown. In the transportation group, as reported by 574 unions with a membership of 54,283 persons,

the percentage out of work was of practically the same magnitude as that reported at the end of August. Workers in the shipping and stevedoring division of the group were slightly more active, but in the steam railway division very little change for the better occurred, and the improvement registered in these two divisions was almost offset by the inactivity reported in the street and electric railway division. No unemployment was indicated by fishermen and lumber workers and loggers. More work was afforded hotel and restaurant employees and theatre and stage employees. Barbers were not quite so fully engaged and retail clerks and stationary engineers and firemen reported no change in the situation.

A summary of employment during the quarter ending September 30, 1923, as reported by trade unions appears elsewhere in this issue.

**EMPLOYMENT OFFICE REPORTS.** During the month of September, 1923, the offices of the Employment Service of Canada

made 61,519 references to positions and effected a total of 59,800 placements. Of the latter the number in regular employment was 51,740, of which 48,333 were of men and 3,407 of women. Placements in casual work numbered 8,060. The number of men applying for employment at the offices was 56,895, and the number of women 10,202, a total of 67,097 applicants. The Service received notification of 77,086 vacancies, of which 67,065 were for men and 10,021 for women. A substantial increase is shown in the volume of vacancies offered, while placements and applications were approximately the same as during the previous month. In comparison with September of last year a marked gain is reported. Due to harvesting activities in the prairie provinces, the average daily business of the offices during this month reached a point higher than at any previous period.

A report in detail of the work of the offices for the month of September will be found elsewhere in this issue.

A statement covering the activities of the offices of the Employment Service of Canada for the third quarter of 1923 will also be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED.** According to the Dominion Bureau of Statistics, the value of building permits issued in 56 cities during September declined to \$10,485,613 from \$11,541,593 in August and \$11,424,119 in September, 1922.

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded in Canada during October amounted to \$30,078,100 compared with \$23,382,100 in September and \$24,270,300 in October, 1922. Residential buildings amounted to \$8,434,600, or 28.1 per cent, business buildings amounted to \$4,345,600 or 14.4 per cent, industrial buildings \$1,329,800 or 4.4 per cent, and public works and utilities, \$15,968,100 or 53.1 per cent. Of the total value of contracts awarded in Canada during October, \$9,205,400 was to be spent in Ontario, \$15,150,700 in Quebec, \$755,500 in the maritime provinces and \$4,966,500 in the western provinces.

**PRODUCTION REPORTS.** The Dominion Bureau of Statistics reports

that the production of pig iron and ferro-alloys in Canada during September was 75,216 long tons, a decline of 18.8 per cent from the August production of 92,587 tons. The output of basic pig iron was 27.5 per cent less, there being 46,580 tons; foundry iron amounted to 17,536 tons, a decline of 29.8 per cent while the output of malleable iron showed an increase of 232 per cent to a total of 11,100 tons. The cumulative production for the three quarters ending September was 684,596 tons, the output for the nine months of 1922 and 1921 being 275,989 tons and 457,157 tons respectively. The average monthly production during the first nine months of the present calendar year was 75,000 tons.

During the past five years this record was only exceeded in 1920 when the average for the nine months' period was about 80,000 tons. Ferro-alloys rose to 2,581 tons, a slight increase over the 2,258 tons in August. The production consisted almost entirely of the grade containing 15 per cent silicon content. At the end of the month there were in operation seven furnaces as compared with nine in the previous month. Those in operation included two at Hamilton, Ont.; one at Port Colborne, Ont.; one at Sault Ste. Marie, Ont.; and three at Sydney, N.S.

The production of steel ingots and castings amounted to 66,334 gross tons as compared, with 105,056 tons in the preceding month. Practically the whole of the decline was in the production of open hearth steel ingots for the further use of the reporting firms. The cumulative production for the nine months ending September was 721,352 tons, a marked increase over the quantity produced for the same periods of 1922 and 1921 when 334,835 tons and 477,588 tons, respectively, were made. The average monthly output at the end of September this year was 80,000 tons which average has only been exceeded in the past five years by the 9-months' average in 1920, which was about 94,000 tons.

A report from the Department's correspondent at Cobalt states that 8 cars of silver ore were shipped during the month from the Cobalt camp, containing approximately 641,740 pounds of ore, (including two cars from the Keeley Mine, South Lorrain containing approximately 168,360 pounds) as compared with 24 cars of silver ore containing 1,795,535 pounds in the previous month. The Nipissing Mine shipped 176 bars containing 201,209.29 ounces of silver, and The Mining Corporation of Canada shipped 251 bars containing 254,290.71 ounces, making a total of 427 bars containing 453,500.00 ounces for the month of September as compared with 661 bars containing 716,955.59 ounces for the previous month.

A report from the British Columbia Forestry Branch shows that 202,547,218 feet board measure of timber was scaled in the province during September. The total includes Douglas fir, 72,433,340 feet; red cedar, 51,217,362 feet; spruce, 27,019,387 feet; hemlock, 29,605,857 feet; balsam, 6,507,002 feet; yellow pine, 4,658,565 feet; white pine, 2,878,693 feet; jack pine, 4,292,718 feet; larch, 3,556,433 feet; cottonwood, 343,538 feet; other species, 34,323 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$21,819,162 in September as compared with \$21,953,169 in August. The gross earnings for the first nine months of 1923 amounted to \$181,558,228 as compared with \$164,382,346 for the same period in 1922.

The gross earnings of the Canadian Pacific Railway for September were given in a preliminary statement as \$17,745,909 in comparison with \$18,149,528 in the same month of the previous year; and for the nine months ending September 30, 1923, as \$130,686,362, while for the same period in 1922 they amounted to \$124,826,771.

### Strikes

The time loss due to industrial disputes reported to the Department during October was greater than during either September, 1923, or October, 1922. There were in existence at some time or other during the month 14 disputes, involving 2,497 employees and a time loss of 55,994 working days, as compared with 17 strikes in September, involving 1,844 employees and a time loss of 35,237 working days. In October, 1922, there were recorded 18 disputes involving 3,240 employees and a time loss of 54,758 working days. At the beginning of October there were on record 12 disputes involving 912 employees. Two new disputes commenced during October, with a time loss of 31,370 working days. One of the strikes

commencing during October terminated during the month. At the end of the month, therefore, there were 13 disputes involving 2,467 employees.

### Prices

Seasonal increases in the prices of dairy products were mainly responsible for a slight advance in retail food costs. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.65 at the beginning of October as compared with \$10.46 for September; \$10.23 for October, 1922; \$11.48 for October, 1921; \$16.92 for June, 1920 (the peak); and \$7.99 for October, 1914. Substantial increases occurred in eggs, butter, and cheese while there were smaller increases in sugar, lard, bacon, milk, and rice. The only important decline was in potatoes though beef, evaporated apples, and prunes were also slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.16 for October as compared with \$20.97 for September; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.92 for July, 1920 (the peak); and \$14.48 for October, 1914. Fuel and rent showed little change from the levels in September.

The index number of wholesale prices in Canada constructed by the Dominion Bureau of Statistics declined slightly from the levels reached in September. Based upon average prices in 1913 as 100 the index stood at 153.1 for October as compared with 154.7 for September; 145.9 for October, 1922; 155.5 for October, 1921; 256.9 for May, 1920 (the peak). In the grouping according to chief component material, the vegetable group, the Iron group, the Non-Ferrous Metals group, and the Chemical group were lower. Each of the other four main groups were slightly higher. In the classification according to purpose both Consumers' Goods and Producers' Goods were lower.

The index number based upon prices of 271 commodities in 1890-1899 as 100

published by the Department of Labour since 1910 showed little change at 221.2 for October; 221.3 for September; 219.8 for October, 1922; 229.2 for October, 1921; 356.6 for May, 1920 (the peak); and 138.7 for October, 1914. Important advances occurred in the prices of sheep, milk, eggs, fresh fruits, sugar, raw cotton, anthracite coal, and linseed oil, while the prices of western grains, cattle, hogs, dressed lamb, cheese, potatoes, flour, pig iron, Connellsville coke, gasoline, and raw rubber were substantially lower.

The index calculated by the Canadian Bank of Commerce based upon prices 1909 to 1913 as 100 was slightly lower

in October at 157.94 as compared with 158.44 for September. The index of imports was up while that of exports was lower. Professor Michell's index of forty articles, twenty foods and twenty manufacturers' goods, based on prices 1900 to 1909 as 100, fell from 178.8 for September to 174.2 for October. Both foods and manufacturers' goods declined.

The special index number of fifty commodities calculated by the Department of Labour based upon prices in 1913, advanced slightly to 151.9 for October as compared with 151.6 for September; and 147.3 for October, 1922.

## CANADIAN IMPORTS AND EXPORTS DURING SEPTEMBER, 1923

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing value of the imports of various classes of commodities, free and dutiable, for the months of September, 1922 and 1923, and for the six months ending September of these years, and

of the exports, domestic and foreign, of similar classes of goods for the same periods.

The following table shows the value of imports, free and dutiable, and of the exports, domestic and foreign, of the various classes of products, for the month of September, 1923.

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
Agricultural and vegetable products, mainly foods..	1,722,540	7,100,673	11,672,679	72,711
Agricultural and vegetable products, other than foods .....	1,717,780	2,577,779	2,877,908	74,250
Animals and animal products.....	1,439,971	1,939,915	15,621,723	311,004
Fibres, textiles, and textile products.....	2,493,430	9,605,457	540,135	66,461
Wood, wood products and paper.....	1,427,115	1,924,516	23,181,617	75,979
Iron and its products.....	2,477,884	13,113,774	5,373,794	347,821
Non-ferrous metals and their products.....	1,168,817	2,314,461	3,762,726	41,751
Non-metallic minerals and products.....	5,993,128	7,503,119	2,044,353	42,407
Chemicals and allied products.....	801,579	1,120,243	1,065,920	9,387
Miscellaneous commodities.....	2,793,190	2,106,824	1,431,786	173,659
Totals .....	22,065,434	49,315,766	67,542,641	1,214,930

In September, 1923, the duty collected amounted to \$11,263,441 as compared with \$10,232,943 in September, 1922.

The following comparative table shows the values of merchandise enter-

ed for consumption and the merchandise, domestic and foreign, exported in the months of September, 1922 and 1923, and in the six months ending September of these years respectively:

	Month of September		Six months ending September	
	1922	1923	1922	1923
Merchandise entered for consumption.....	60,318,410	71,351,200	363,915,736	464,330,317
Merchandise, domestic, exported.....	71,592,628	67,542,641	388,233,296	453,769,440
Total .....	131,911,038	138,893,841	752,149,032	918,099,757
Merchandise, foreign, exported.....	1,341,653	1,214,930	7,225,848	7,261,293
Grand total, Canadian trade.....	133,252,691	140,108,771	759,374,880	925,361,050

### PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF OCTOBER, 1923

**D**URING the month of October, the Department received reports of two Boards of Conciliation and Investigation appointed to deal with disputes between (1) various railways, members of the Railway Association of Canada, including the Canadian National Railways and the Canadian Pacific Railway, and certain of their employees, being maintenance-of-way employees and railway shop labourers, including bridge and building employees, trackmen,

pumpmen, pump repairers, signalmen, track watchmen, shop labourers and others, represented by the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers; and (2) the Canadian Pacific Railway Company and certain of its employees, being station agents, assistant agents, telegraph operators, train dispatchers, traffic supervisors and linemen, members of the Order of Railroad Telegraphers.

#### Report of Board in dispute between various railways, members of the Railway Association of Canada, and certain of their employees.

A report was received from a Board established to deal with a dispute between various railways, members of the Railway Association of Canada, including the Canadian National Railways and the Canadian Pacific Railway, and certain of their employees being maintenance-of-way employees and railway shop labourers, including bridge and building employees, trackmen, pumpmen, pump repairmen, signalmen, track watchmen, shop labourers and others

represented by the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. The Board was composed of Mr. E. McG. Quirk, Montreal, chairman, appointed by the Minister in the absence of a recommendation from the other two members of the Board, Messrs. R. T. Riley, Winnipeg, and David Campbell, Winnipeg, nominees of the employers and employees respectively. The report was unanimous and contained recommendations for the settlement of the dispute.

The text of the report is as follows:

**Report of Board**

Montreal, Que.,  
October 18, 1923.

*Re* the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between: Various Railways, members of the Railway Association of Canada, including the Canadian National and Canadian Pacific Railways (Employers); and: Workmen, being Maintenance of Way Employees and Railway Shop Labourers, including Bridge and Building Employees, trackmen, pumpmen, pump repairmen, signalmen, track watchmen, shop labourers and others, represented by the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers (Employees).

The Honourable James Murdock,  
Minister of Labour,  
Ottawa, Ont.

Sir,

The Board established by you under date of August 23rd, 1923, composed of: Mr. R. T. Riley, of Winnipeg, representing the Employers, Mr. David Campbell, of Winnipeg, representing the Employees, and Mr. E. McG. Quirk, of Montreal appointed as Chairman in the absence of a joint recommendation of the parties, has the honour to report:

The parties to the dispute are members of Canadian Railway Board of Adjustment No. 1. Appearing before the Board on behalf of the Employing Railways were: Mr. Geo. Hodge, Assistant General Manager, Canadian Pacific Railway, Eastern Lines; Mr. M. S. Blaiklock, Assistant Chief Engineer, Canadian National Railways; Mr. A. E. Crilly, Chief of Wage Bureau, Canadian National Railways; and Mr. A. Freeman, Staff Registrar, Temiskaming and North-western Ontario Railways;

On behalf of the Employees: Mr. A. McAndrew, Chairman, Central Committee for Canada, U.B.M. of W.E. and R.S.L.; Mr. W. Aspinall, Secretary; Mr. G. H. Cummings, Vice Chairman; Mr.

P. Woods, Mr. P. Johnston, Mr. F. Baggett, Mr. G. Geraldi, Mr. J. J. O'Grady, Mr. M. H. McCurdy, Mr. J. Gagne, Mr. W. H. Smith, Mr. C. F. Anderson, Mr. R. Sale, Mr. A. Caley, Mr. D. McGee, Mr. C. L. Winter, Mr. W. V. Turnbull, Grand Vice President, U.B.M. of W.E. and R.S.L.; Mr. L. E. Keller, Grand Statistician, U.B.M. of W.E. and R.S.L.

Mr. Geo. Hodge, speaking on behalf of the Railways, and Mr. A. McAndrew for the Employees.

The nature of the dispute being a demand by the Employees for the following:

1st:

That Section One of Wage Agreement No. 7, existing between the Railway Association of Canada (as representing the above named Railways) and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers, reading as follows:

"Section 1"

"By Maintenance of Way Employees is meant employees working in the Track and Bridge and Building Departments, for whom rates of pay are provided in this schedule, who have been in the service previously for *six months* in the preceding twenty-four months. Labourers in extra gangs, unless those practically engaged all the year round, shall not be considered as coming under this schedule."

shall read:

"Section 1"

"By Maintenance of Way Employees is meant employees working in the Track and Bridge and Building Departments, for whom rates of pay are provided in this schedule, who have been in the service previously for *one month* in the preceding twenty-four months. Labourers in extra gangs, unless those practically engaged all the year round, shall not be considered as coming under this schedule."

2nd:

That the rates of pay for the various classifications of Employees set forth in Wage Agreement No. 7 shall be increased five (5c) cents per hour.

The parties submitted to the Board their respective arguments and contentions in written form, with accompanying charts, supplementing same by explanation and commentary.

During the proceedings the Board urged the parties to make further efforts to reach some agreement by conference, and suggested an adjournment of the Board for this purpose. Both parties, however, made it clear that they had negotiated for a long time without any success, that these negotiations had been amicable throughout, and that further conference between the two would be useless.

The Board is indebted to the parties for the full and careful presentation of their respective views in regard to the matters in issue, and also for the pleasant and harmonious attitude throughout.

After a full and careful consideration of all the evidence, material and arguments submitted, the Board has unanimously decided to make the following recommendations.

### Report of Board in dispute between the Canadian Pacific Railway Company and certain of its employees.

A report was received from a Board established to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees, being station agents, assistant agents, telegraph operators, train dispatchers, traffic supervisors and linemen, members of the Order of Railroad Telegraphers. The Board was composed of Colonel O. M. Biggar, K.C., Ottawa, chairman, appointed by the Minister in the absence of a recommendation from the other two members of the Board, Messrs. J. B. Coyne, K.C., Winnipeg, and David Campbell, Winnipeg, nominees of the company and the employees respectively. The report was signed by Colonel Biggar and Mr. Coyne. A minority report signed by Mr. David Campbell, nominee of the employees, was also received.

The text of the reports is as follows:

#### Report of Board

Ottawa, October 25th, 1923.

In the matter of a dispute between the Canadian Pacific Railway Com-

The Board recommends:

1. That Section 1, as proposed by the employees, should be adopted;
2. That the paragraph in parenthesis in Section 22 be amended so as to conform with Section 1, by changing the probationary period to read one month instead of six months;
3. That sub-section (g) of section 22 in the third and last lines thereof be amended by striking out the words "on which they are employed" and inserting the words "or elsewhere" in lieu thereof;
4. That wherever in Wage Agreement No. 7 the Maintenance of Way Employees are now receiving a rate of wage of less than forty (40c) cents per hour, an increase of two (2c) cents per hour be provided.

The whole respectfully submitted.

(Signed) E. MCG. QUINN.

(Signed) R. T. RILEY.

(Signed) D. CAMPBELL.

pany and certain of its employees, being station agents, assistant agents, telegraph operators, train dispatchers, traffic supervisors and linemen, members of the Order of Railroad Telegraphers.

To

The Honourable the Minister  
of Labour,  
Ottawa, Ontario.

In this matter the Board constituted under the Industrial Disputes Investigation Act, and consisting of the undersigned and Mr. David Campbell, has the honour to make its report.

The Board met in Montreal on Thursday, October 18th, for organization, and arranged to proceed with the hearing on the following morning. Messrs. G. Hodge and A. E. Stevens then attended for the company and the Honourable G. D. Robertson for the telegraphers. With the latter there were also in attendance as witnesses the following: Messrs. A. E. Chapman, London, Ont., Geo. Gilbert, Winnipeg,

Man., G. S. Larlee, Bath, N.B., J. N. Potvin, Montreal, P.Q., A. Houston, Nashville, Ont., J. A. Bell, Sudbury, Ont., W. G. Fraser, Neepawa, Man., J. T. McOrmond, Sutherland, Sask., T. M. Hamblin, Medicine Hat, Alberta, F. D. Pelkey, Ruskin, B.C., and E. Messier, Montreal, P.Q. The hearing continued during the whole of October 19th and 20th, the same gentlemen being present throughout with the exception of Mr. E. Messier, who attended only upon the first of the two days.

The considerations supporting the views of both parties were most admirably, lucidly and temperately presented, and during the discussion the Board sought to discover a basis upon which the parties might agree. In this, however, it was unsuccessful, and at meetings at Ottawa on October 22nd, 23rd and 24th it attempted to arrive at a unanimous report. This effort also failed, and the present report was settled to-day. Mr. Campbell does not concur in it.

The Board was constituted on the application of the employees for the purpose of considering a request for a general wage increase and some few changes in working rules. It appeared, however, that all but one of the proposed changes in working rules had been disposed of in direct negotiations between the parties. There remained the question of the general wage increase and the proposal to add to the yearly remuneration of train despatchers, traffic supervisors and certain assistant agents an amount equal to seven days' pay.

The latter proposal was first discussed. It appears that the positions proposed to be affected have always involved work on the seven principal Dominion holidays, and the monthly salaries settled from time to time, and for the last time in August, 1922, in conferences between representatives of the employees and of the company have always been arrived at on this footing, the number of "days assigned per year" for assistant agents (313 or

306) being specifically stated in the schedule to the print of the agreement, 517 of the positions thus specifically scheduled calling for 313 days and 142 for 306. For example, in the Quebec district, Farnham Division, four successive entries are as follows:

Station	Occupation	Rate per month	Days assigned per year
Delson.....	Asst. Agent	\$71.50	313
Cowansville.....	" "	76.50	306
Sutton.....	Station helper	76.50	306
Abercorn.....	" "	70.00	313

It is obvious that, if the present relation between the rates of pay for these four positions is reasonable, it would no longer be so if an addition were made to the first and fourth and none to the second and third. While this difficulty would be avoided by calculating the increase in cost to the company of the proposed change and leaving the distribution of that additional sum among the classes and individuals affected to be made by arrangement between the company and the men's organization, the considerations for and against that course are identical with those applicable to the question of a general wage increase, and the special case of the train despatchers and traffic supervisors does not appear to require separate consideration, especially as they are entitled to a three weeks' annual vacation, as against a two weeks' vacation for all other classes of telegraphers. The Board is consequently compelled to recommend against the proposed alteration.

During and after the war increases in rates of pay were of course necessary in view of the constantly increasing cost of living, and the general average pay of telegraphers of all classes was increased at four different times. In making the last two of these

four increases, United States precedents were followed, and the result for most classes was to put the individual employees into a better position relatively to the cost of living than they had been at the commencement of the war, notwithstanding that at the same time as the third increase there was a reduction of daily hours from ten to eight for all telegraphers except train despatchers and traffic supervisors, who had already had an eight-hour day before the war. The cost of the telegraphic service to the company was thus increased much more in proportion than the income of the individual employees generally. As the post-war reduction in the cost of living progressed, the improvement relatively to the cost of living of the position of the individual employees in comparison with the pre-war period extended itself to all classes, and for some became very considerable in spite of the reduction of daily hours.

Again following in part the precedents set by reductions in the United States, a substantial reduction was made in the middle of 1921, and a further smaller reduction in August, 1922. The employees now ask for a general increase of six cents an hour, or \$12.24 a month per man, the additional fund to be thus made available to be distributed among the several classes and positions by conference held in accordance with the usual practice. The result would be to increase the expense to the company of the telegraphic service by nearly \$500,000, and not only to wipe out the decreases made in 1922, but a part of that of 1921.

Notwithstanding these two reductions and the reduction of hours in 1918, the position of all classes of telegraphers is now considerably better, not only absolutely, but in relation to the best available figures as to the cost of living, than it was immediately before the war, and either better than or almost as good as at any time since the war commenced except the early

months of 1921. Comparing the middle of 1914 with the present time, the percentage wage increase in money varies for the different classes of telegraphers from 95 per cent at the highest to 62 per cent at the lowest. Relatively to the cost of living figures, the percentages of improvement are, of course, not so great; they range from a maximum of 33 per cent to a minimum of 11 per cent. Taking the operators on eastern lines as an example, and taking their minimum pay just before the war as a base, the increases of 1916 and 1917, which brought their minimum up to \$78 a month, just about sufficed to maintain that basic standard. The 1918 increase to \$104 was at first more than sufficient, but by April, 1920, a further increase to \$108-110 was necessary. At that time the minimum was in fact raised to \$130, and though living costs slightly increased during the following three months, they then began their steep descent. In money, the minimum in May, 1920, exceeded by \$20-22 the amount required to maintain the pre-war standard, and though the minimum has since been reduced from \$130 to \$117, the fall in prices has been such that instead of this \$117 between \$83 and \$84 would now be a real wage corresponding to the real wage of 1914. Beyond what is necessary to maintain the pre-war standard the operators in question are therefore now receiving an excess of about \$33. This is not only a greater absolute excess than at the time wages were raised to their highest point, but having regard to the intervening increase in the value of money, it is equivalent to more than \$40 in 1920. In other words, the present minimum is such that the excess over what is required to maintain the pre-war standard is equal to nearly twice the corresponding excess at the time when rates were raised to their highest point, and is almost equal to or greater than the excess at any time either before or since, except for the few months at the beginning of 1921 immediately preceding the first post-

war reduction when the cost of living was falling very rapidly. The figures in relation to other classes of telegraphers and men above the minimum would present the same general characteristics, and these advances in real rates of pay are so recent that, apart from other considerations, a demand for a further increase in them seems clearly to be premature.

In spite of this recent substantial increase in real remuneration, there is, as has been made clear to the Board, a good deal of dissatisfaction among the men. That this should be so is natural, partly by reason of the reductions they have suffered in their monthly incomes in money, and partly no doubt because the best available information as to the alteration in living costs, being necessarily general in its character, may be inapplicable in particular localities, and, even more importantly, to individual family budgets, which are determined to so high a degree not only by personal preferences, habits and prejudices, but by changes in the constitution and consequent requirements of families. The Board, therefore, with a full appreciation of the importance of insuring cordial co-operation between a railway company and its employees, has considered every possible ground upon which a general increase of pay could be awarded. It has also kept in mind the employees' contention that last year's decreases were agreed to in the expectation of a further substantial drop in living costs which has not occurred, but it has nevertheless not been able to reach the conclusion that, either by reason of the relation of rates of pay to cost of living, or by a comparison of rates of pay on the Canadian Pacific Railway with those in force on other railways, or even (if the consideration is admissible, which perhaps it is not) having regard to the earnings of the railway company, there is any sound ground upon which a general increase at the present time could be based.

To point the argument in support of such an increase, attention was particularly directed to the difficult position of two classes of telegraphers, viz: operators at continuously open offices and operators whose gross incomes were substantially reduced last year although the rates payable to them suffered only a negligible cut. The average pay of operators of the former of these classes is somewhat lower on the Canadian Pacific than on other railways, but this appears to be wholly a matter for consideration in a redistribution by negotiation of the present expenses to the railway of the telegraphic service, the general average rate for all operators on the Canadian Pacific being shown to be rather higher than on other Canadian railways. The difficulties of the latter class (which doubtless includes some men who also fall within the former) can, in the opinion of the Board, likewise only be removed by such a redistribution. Prior to last year the men in question worked seven days in a week, receiving time and a half for Sundays, their annual remuneration (allowing for vacations) being equal to pay for 390 ordinary working days. In last year's negotiations the company proposed that ordinary time instead of time and a half should be payable for Sundays. The proposal was strenuously opposed, and an agreement was reached whereby the company employed about 100 additional men and relieved each of the 600 men concerned on one day in seven. The result was that 14/15ths of the annual amount previously paid to 600 men was distributed among 700, and each of the 600 therefore suffered a diminution in gross income of nearly 20 per cent, their working days per year being, however, reduced by nearly one in seven.

It is probable that many of the men concerned do not feel that freedom on every seventh day is worth the consequent reduction in gross income, and the Board thinks it likely that the present dispute would not have arisen but for this feeling. Perhaps the men con-

cerned would rather have an extra day's pay for an extra day's work, and if they would, the Board sees no reason why the company should not so agree. The Board, however, finds it impossible to recommend that the arrangement arrived at last year on this subject should be completely set aside, and cannot suggest any practicable variation of it except in this way.

All of which is respectfully submitted by the undersigned, who have the honour to be, Sir,

Your obedient servants,

(Sgd.) O. M. BIGGAR,  
Chairman.

(Sgd.) J. B. COYNE,  
Member of Board.

**Minority Report**

October, 27th, 1923.

Honourable James Murdock,

Minister of Labour,  
Ottawa, Ontario.

Sir,—

The Board established by you on the 6th day of September, 1923, under the Industrial Disputes Investigation Act, 1907, to inquire into the dispute between the Canadian Pacific Railway Company, employer, and certain of its employees, being station agents, assistant agents, telegraph operators, train despatchers, traffic supervisors and linemen, members of the Order of Railroad Telegraphers, heard the representatives of the parties to the dispute at Montreal on October 19th and 20th, 1923.

The employer was represented by Messrs. G. Hodge and A. E. Stevens, and the employees were represented by Senator Robertson and Messrs. A. E. Chapman and George Gilbert, together with a committee and witnesses of some ten or more men. The representations of the parties were set forth in able and extensive arguments, and a large quantity of data and material, in some 31 exhibits, were filed with the Board. The entire proceedings indicated an

absence of unpleasant discord, but both parties were emphatic and unbending on all points in dispute.

The matters in dispute were:

1. That where train despatchers and assistant agents are required to work on seven specified legal holidays, they should be paid at overtime rates therefor the same as all other telegraphers and employees whose services are covered by the schedule agreement.

2. That a sum equivalent in the aggregate to an increase of 6 cents per hour for all employees whose services are covered by the schedule agreement should be appropriated and applied to the following purposes:

(a) Compensating to a reasonable extent some 700 employees, known generally as terminal operators for a loss of wages and earnings resulting from the agreement made between the parties in August, 1922.

(b) Compensation to linemen for a reduction of wages amounting to \$5.50 per month as a result of the above agreement.

(c) Compensation to assistant agents for a reduction in wages of \$5.50 per month also as a result of that agreement.

(d) Payment of despatchers and assistant agents for time worked on legal holidays.

(e) An adjustment of rates of pay at particular points where special circumstances exist, such as increased traffic which had developed since the date of the above agreement.

It was understood that any increase made in wages in the aggregate could be mutually apportioned by the local officers of the Company and the local representatives of the employees. This practice appears to have been followed for many years. Certain minor differences on the working rules which existed between the parties at the time

the Board was established have since been adjusted by them.

The number of employees affected by the dispute is 3,102, made up of 151 train despatchers, 1,100 agent operators, 1,091 telegraph operators, 673 assistant agents, 87 linemen, together with some five or six supervisors. The locality of the dispute is the Canadian Pacific Railway lines in Canada.

It appears that effective July 16th, 1921, the wages of these employees were reduced for train despatchers \$16.32, linemen \$16.32, assistant agents \$13.00 per month and all other agents and operators \$12.40 per month. In April 1922 nine months after this reduction in pay the Company again notified these employees that further modification in the working rules was proposed and a further reduction of \$14.00 per month to linemen and \$7.00 per month to assistant agents was to be made. Just why these two classes were singled out for this reduction does not appear, at all events, on the surface. It is to be noted that in 1912 the minimum monthly wage of an operator was \$60.00 and for a lineman it was \$74.80. Now the minimum for an operator is \$117.00 and if the linemen's minimum had been increased proportionately since 1912 it would now be \$145.86 instead of \$129.18.

Among the chief changes in working rules proposed by the Company was a change for the payment of time worked on Sunday and legal holidays from time and one half to the basis of pro rata or straight time only, and an increase in the work day from eight to ten hours and a lower rate for special calls outside of the regular working hours. For many years the train despatchers have been relieved from duty one day per week and were not paid extra for Sunday work unless for some reason they could not be so relieved. This relief work was performed in each office by a special relief man commonly known as a "Swing Despatcher." The work of a train despatcher is continuous the full twenty hours every day. The

monthly wages for despatchers range from \$210.00 to \$240.00. There are also some two hundred telegraph offices which are likewise continuous, and where at least three men are employed, each working an eight hour trick or shift, whose monthly wages range from \$118.00 to \$162.00, the average being \$143.57. These operators have generally been required to work the full seven-days per week, receiving time and one half for Sundays. Other operators, agents, assistant agents and linemen worked, or were excused from work on Sundays according to the particular requirements of their respective offices, and when required to work were also paid at the rate of time and one half.

An agreement was reached in August, 1922, whereby the work limit of the period of eight hours was extended to nine hours, and the arrangement for special calls outside of working limits was materially modified in favour of the Company, and meant in the aggregate, a very substantial saving in costs to the Company. But the rule as to time and a half for Sunday service involved a principle which the employees were determined should not be modified, the high rate having the effect of limiting the service to actual necessity, thus protecting the employees against unnecessary Sunday work. The company then ought to avoid the effect of this high rate for Sunday services at these so-called terminal or continuous offices by proposing that the company should have the option of relieving them one day in seven by using "Swing Operator" in a manner similar to the practice of relieving the despatchers, and the employees finally consented to try out this plan. Approximately 100 "Swing Operators" were employed in this one day a week relief work, being paid the rate per day of the men relieved, and the regular men being relieved one day in seven in lieu of Sunday work. This, however, meant a loss in their earnings of fifty days per year at time and one half or seventy-

five days at regular rates. Their average rate being \$143.57 per month, their annual reduction in earnings amounted to an average of \$414.14 or approximately an average of \$34.51 per month. In fact one operator working at Montreal testified that prior to this arrangement he had earned \$187.75 per month and since the change he earned only \$132.00 per month, this loss of earnings being \$55.75 per month.

When a wage of \$143.57 per month, to a man with a family in large towns and cities where rents and living costs are highest, is suddenly reduced \$34.51 it is a very serious matter to those affected. Several men employed in Montreal were called to testify as to the effect of this reduction upon them and their standard of living. But it does not require evidence, or indeed any profound thinking to those who are householders to appreciate results of such a falling off in one's earnings.

The proposed reductions in monthly wages of \$14.00 and \$7.00 respectively for linemen and the assistant agents were finally settled by a reduction of \$5.50 per month to those particular employees, the remainder of the proposed reductions being set off by a small general reduction said to amount to seventy-six cents per month to all other employees.

The employees estimate a loss of earnings to them and monetary saving to the Company as a result of the agreement of August, 1922, at \$494,000.00. While declaring that this estimate is high, the Company, although having access to the actual figures, did not see fit to furnish the Board with the exact amount.

These reductions were generally predicated on a downward trend in the cost of living which it was anticipated would continue to a material extent during the following year. Negotiations for reduced wages for these classes of employees on Canadian National lines did not take place until some months after, and by that time

the cost of living instead of following the downward trend had begun to rise, so that such extensive reductions could not be made then and the terminal operators were slightly increased and the method of working Sundays at time and a half was not disturbed. The result was that the average wages for these employees in similar cities and towns are higher on the Canadian National Railway, and in the aggregate the average is \$155.47 per month, compared with the Canadian Pacific average of \$143.57. The wages of linemen and assistant agents were not materially reduced.

It also appeared that none of the employees in engine and train service in Canada suffered any reduction in wages in 1922, and following a decision of the United States Railway Labour Board, it was proposed to reduce the pay of the shop crafts and maintenance of way employees. But that decision was met with strikes and a general storm of protest in the United States and so was withdrawn. Similar proposed reductions in Canada were thereupon abandoned and the wages of maintenance of way employees were increased two cents per hour.

It was also urged by the employees that their wages were not and never have been commensurate with the great responsibilities involved in the handling of train orders controlling the movement of trains, and the necessary qualifications required for station and telegraph work. They pointed to a fatal accident which occurred recently on another railway in Ontario where the momentary oversight or failure to deliver or promptly to discover an undelivered train order resulted in a collision which caused the death of three men, and both the despatcher and operator are now awaiting trial on charges of criminal negligence.

The employees contended that train despatchers and assistant agents were discriminated against when not paid extra for work necessarily performed

on legal holidays, and that the rates of pay were fixed without reference to whether or not such work was done. A reference to the scale of wages in the schedule agreement appears to substantiate these contentions. It is evident that if train despatchers rates had kept pace with those of agents and operators since 1912 they would now be much higher than they are, the minimum for despatchers would now be \$241.80 instead of \$210.00. Notwithstanding this the agents and operators are now paid extra for work performed on legal holidays. If, as the Company contended, the individual ratings were fixed with due regard to the fact that at certain places men must work on these days, then there would be corresponding distinctions in the scale of wages. An examination of the scale shows minimum ratings for a large number of assistant agents, some of whom have this work prescribed to them and others not, and without the slightest distinction in the monthly rates.

The Company was opposed to making any changes which would have the effect of increasing operating costs, and submitted statements showing that freight and passenger rates in Canada had undergone greater reductions and were lower than in the United States. It was also contended that the Company could not continue to pay its fixed charges and usual dividends if the employees' demands were met, and that any increased cost of operating would therefore compel the recognition of a demand for higher freight and passenger rates.

The Company also contended that there had been no material change in conditions since the agreement of a year ago, and that it should therefore not be disturbed; that moreover, the cost of living had declined and that therefore wages should be further decreased rather than increased.

Having regard to the above mentioned facts and events it is not dif-

ficult to find the cause of the existing dissatisfaction, and the demand for some increase and adjustment of wages. I find they are briefly as follows:

1. The reduced earnings of the 600 terminal operators, an average of \$34.51 per month, thus placing them below the level of a reasonable living wage.

2. The low level of wages having regard to the necessary qualifications and responsibilities which the nature of the service demands.

3. The only class of the Company's employees against whom decreases were maintained since the general decrease of 1921.

4. No corresponding decreases imposed upon similar employees on other railway lines in Canada.

5. The failure of the predicted substantial decrease in the cost of living to materialize subsequent to the date of last year's agreement.

6. The inadequacy of wages of line-men, agents, operators and assistant agents, the average of these being only \$133.58, notwithstanding the fact that some agents are rated above \$200.00 per month.

7. Discrimination against train despatchers and assistant agents in the matter of extra pay for work on legal holidays.

8. The higher rates paid by the Canadian National Railway at busy terminal offices, the average being \$155.47 compared with \$143.57 being the average paid at similar offices on the Canadian Pacific Railway.

In considering my duty under the Act as to recommending what, according to the merits and substantial justice of the case, ought to be done, I regret exceedingly that I have been unable to follow the majority views of the Board. I am unable to believe that a recommendation suggesting any further decreases in any direction as a means of equalizing irregularities can either remove the dissatisfaction or accord

with the merits and substantial justice of the case. Decreases based on future decrease in the cost of living which has not materialized cannot give a meritorious or just basis for further decreases. In fact the cost of living figures supplied by the last issue of the LABOUR GAZETTE shows an increase. Nor can I follow either the logic or merit of creating further dissatisfaction by taking from some of the men pay at the time and one half for necessary Sunday work in order to make up for another class already dissatisfied with the loss that resulted to them by the process.

As to the Company's contention that any increase in operating expenses at this time must, in order to sustain its right to its usual profits and dividends, be transferred to the public in increased freight and passenger rates, is not one which I as a member of your Board can consider. Is it not for this Board to usurp the functions of the Board of Railway Commissioners of Canada. That is the Tribunal appointed by Parliament to deal with freight and passenger rates and to give effect to the Company's argument would be presupposing that Board would not do justice to such matters. Moreover I am convinced that the people of Canada will never expect lower freight and passenger rates if they can only be had by still further sacrifices on the part

of those employees whose wages are neither adequate, as reasonable living wages, nor commensurate with the responsible duties assumed by them.

Having regard to all the facts and circumstances in the case, I think that certain adjustments should be made, and in some cases the monthly wages should be increased.

I therefore recommend:

1. That all terminal and continuous offices where the "Swing Operators" have been employed, or where the wages are lower than for similar service on the Canadian National Railway, the rates of pay of the Operators should be increased on an average of \$12.00 per month.

2. That train despatchers and assistant agents be paid extra *pro rata* for all service performed on the specified legal holidays.

3. That the reduction of \$5.50 applied to the wages of linemen and assistant agents in August, 1922, should be restored.

4. That an additional increase of \$10.00 per month should be made to the wages of linemen.

All of the changes recommended should be effective from the 1st day of September, 1923.

All of which is respectfully submitted.

(Signed) D. CAMPBELL.

---

## SETTLEMENT OF DISPUTE AT DRUMHELLER, ALBERTA

A controversy arose regarding the right to employment of a certain miner who had been employed by the Hy-Grade Mine of Drumheller previous to its closing down for the summer. As the representatives of the Western Coal Operators' Association and District 18, United Mine Workers of America could not reach a settlement with regard to this matter or agree upon an independent chairman, acting under the agree-

ment between the two bodies, they sent a joint request to the Honourable James Murdock, Minister of Labour, asking him to appoint an independent chairman. The Minister appointed Mr. James Smith of Edmonton, Alberta, to the office. In the decision of the chairman the circumstances of the dispute were set forth as follows:

The matter in dispute arose from the refusal of the Hy-Grade Mine to give employment to

J.— C.—, the former claiming that under the agreement with the miners the mine owners had the management of the mine, and the right to hire and discharge the workers in the mine; J.— C.— claiming that under the agreement he was entitled to a preference of employment, as he had been employed in the mine previous to its closing down for the summer, and should, when the mine again began operation, be given employment in preference to new men who had not worked previously in the mine. . . . About the last of July, 1923, the mine resumed partial operations and C.— presented himself at the Hy-Grade Mine and asked for employment, but was refused work, the Mine Company taking the position that under the contract with the miners the Company had the right to employ whomsoever they saw fit, basing their position on the following clause in the agreement:

**Management of the Mine:** The right to hire and discharge, the management of the Mine and the direction of the working forces are vested exclusively in the Company, and the United Mine Workers of America shall not abridge that right.

C.— taking the position that under the agreement where the mines closed down, or where a miner was laid off without any fault on his part on account of suspension of work, that on resumption of work at the mine he should be given preference to new men, and that new men should not be taken on at the mine while the old men who formerly worked at the mine were willing to come back, and he based his position upon the following clause in the agreement:

**Preference of Employment:** In case an employee is thrown out of employment, unless discharged, he shall be given preference over new men in other mines in the same camp operated by the same company.

The Company claimed that this clause in the agreement did not apply to them as they operated only one colliery and only one mine at the colliery. They further claimed that C.— had used threatening and abusive language to the mine manager when told that there was no work for him, and the Managing Director stated that his conduct had a tendency to create discord and trouble among the workers at the mine, and that it would be detrimental to the interest of the owners and shareholders of the mine to employ him.

The conclusion of the judgment was as follows:

Under the clause of the agreement cited—"Management of Mine"—it is clear that the Company have the right to hire and discharge and are responsible for the management and working of the mine.

To my mind the clause cited—"Preference of Employment"—and relied on by C.— must be read with the clause "Management of the Mine", which gives the right to the Company to hire and discharge, and this clause is not varied or changed by the subsequent clause—"Preference or Employment"—so as to compel the Company to employ someone that would be detrimental to its interest, as the evidence here discloses.

Under the evidence introduced at the hearing, I do not believe that C.— has made out a case to compel the Company to give him employment in the mine, and this is my finding.

(Sgd.) JAMES SMITH,  
Chairman.

## COST OF LIVING ADJUSTMENT OF WAGES OF VANCOUVER ISLAND COAL MINERS

**T**HE Cost of Living Commission appointed on January 21, 1919, to determine every three months the changes in the cost of living for coal miners on Vancouver Island, and to report the amount by which wage rates should correspondingly be increased or decreased, has forwarded its report to the Department of Labour for the

quarter ending September 30, 1923.\* The Commission consisted of Mr. Matthew Gunness, representing the miners; Mr. Tulley Boyce, representing the operators, and Mr. F. E. Harrison, Fair Wages Officer of the Department of Labour, chairman.

\*For previous orders see LABOUR GAZETTE, August, 1923, and various preceding issues.

The agreements between one mining company and certain of its employees, under which this arrangement was made, are summarized in the article on Recent Industrial Agreements on another page. The accompanying table shows the changes in the bonus since 1918.

As in previous investigations, forms containing a list of groceries, provisions, meats, etc., were sent out to the merchants and dealers with whom the majority of the miners were accustomed to trade in the various localities. The method of computing the changes for the period under review was the same as used for previous adjustments, namely, to determine the percentage of increase or decrease, as the case may be, of prices at the end of the quarter, over the prices at the end of the preceding quarter, for groceries, provisions, meats, etc., and to add a further two-fifths of this increase (or decrease) as an equi-

valent to cover similar increase (or decreases) in clothing, etc.

For the quarter ending September 30 no change in the level of prices was found so that the wages would be unchanged for the ensuing quarter.

Slight increases were noted in molasses, syrup, sago, tapioca, canned peas, beans and corn, brooms, ham, bacon, cookies, cheese, butter, apricots and pork.

Sharp decrease was noted in pickles.

Slight decreases were noted in canned salmon, corned beef, flours, flavouring extracts, currants, raisins, evaporated peaches, prunes and mutton.

No changes were noted in sugar, jam, peas, beans, barley, rice, canned tomatoes, roast beef and lunch tongue, soap, vinegar, soda biscuits, lard, canned milk, tea, coffee, cream of tartar, matches, beef and veal.

WAGE ADJUSTMENTS ACCORDING TO FINDINGS OF THE COST OF LIVING COMMISSION FOR COAL MINERS IN VANCOUVER ISLAND, NOV. 1918 TO JUNE 1923.

Date of Adjustment of wages	Increase or Decrease	Amount of Change in Mines where Base Rate was		Adjusted Cost of Living Bonus in Mines where Base Rate was

(a) Including an allowance of 4c and 4¾ in the May award to rectify an excess deduction of these amounts in the January award.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Report of Proceedings of Board from September 1, 1920, to September 30, 1923.

FOLLOWING is the second report of proceedings of the Canadian Railway Board of Adjustment No. 1, covering the period from September 1, 1920, to September 30, 1923, in connection of the First Report covering the period from August 7, 1918, to August 31, 1920. The text of the first report was published in the November, 1920, issue of the LABOUR GAZETTE. This Board is representative of the various railways in Canada and of the following railway employees' organizations:—

The Brotherhood of Locomotive Engineers,

The Brotherhood of Locomotive Firemen and Enginemen,

The Order of Railway Conductors,

The Brotherhood of Railroad Trainmen,

The Order of Railroad Telegraphers,

The International Brotherhood of Maintenance of Way Employees.

The agreement for the establishment of the Board in 1918 set out that the parties were united in their desire to avoid disputes or misunderstandings which would tend to lessen the efficiency of transportation service in Canada during the war and that the Board of Adjustment would have authority to determine all differences which might arise between the railway companies and any of the classes of its employees who were parties to the agreement, including the interpretation or application of wage schedules or agreements.

Provision was made that in the event of failure to adjust in the usual manner, personal grievances or controversies over the interpretation of wage agreements the matter should be referred to the Board by the chief officer of the railway and the executive officer of the employees' organization concerned.

Many of the disputes in the ordinary course of events would have fallen under the provisions of the Industrial Disputes Investigation Act and would have entailed the establishment of Boards of Conciliation and Investigation. Under the terms of the agreement the decisions of the Board are binding and all the disputes referred to it were accordingly settled. Provision was made in the agreement constituting the Board for the appointment of a referee in any cases in which the Board was itself unable to agree upon an award; the necessity for the appointment of a referee has not, however, arisen. Up to September 30, 1923, 180 decisions had been given by the Board, all of which were unanimous.

Rooms 701-702 Bank of Nova Scotia Building, 263 St. James Street,

Montreal Que., October 1st, 1923.

Canadian Railway Board of Adjustment No. 1 operated under the Agreement dated August 7th, 1918, from its inception, during and following the War, under Article 18 of the Original Agreement, to April 15th, 1921, when a new Agreement was executed by the representatives of the parties concerned.

The Memorandum of the new Agreement reads as follows:

"MEMORANDUM OF AGREEMENT made between the The Railway Association of Canada, acting for the Railways of Canada, whose names appear in Appendix "A" thereof, members thereof, of the one Part; and the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, the Order of Railroad Telegraphers, and the United Brotherhood of Maintenance of Way Employees and Railway Shop

Laborers, acting for the said classes of employees of the said railways, of the other Part.

WHEREAS the parties hereto, guided by a desire to aid in the preservation of industrial peace in the Dominion of Canada, have resolved upon the appointment of a Board composed of members to be selected as hereinafter prescribed, which shall have full power and authority to determine all differences which may arise between any of the said railways and any of the classes of its employees above-mentioned, and which are not settled between the officers and employees of the railway concerned, including the interpretation of wage schedules or agreements, having due regard to the rights of the several classes of employees and of the railways respectively.

Now, therefore, it is agreed by and between the parties as follows:

1. The Board appointed in pursuance of the terms of agreement dated August 7th, 1918, between the parties hereto, known as Canadian Railway Board of Adjustment No. 1, shall be continued subject to change or dissolution as provided for herein.

2. The Board shall consist of twelve members, six to be selected by the Railway Association of Canada and compensated by the railways, and six by the Executive Officers of the organizations of employees hereinbefore named, and compensated by such organizations.

3. The officers of the Board shall consist of a Chairman and a Vice-Chairman who shall be members of the Board and elected by the Board, and a Secretary appointed by the Chairman subject to approval of the Board.

The Chairman and Vice-Chairman shall serve for a period of one year from date of election. In case of vacancy, the position shall be filled for unexpired portion of term by the election of a member of the Board.

The Chairman or Vice-Chairman shall preside at meetings of the Board,

and both are required to vote upon the adoption of all decisions by the Board.

4. The Board shall meet regularly at stated times and continue in session until all matters placed before it at the commencement of the session in accordance with its regulations, have been considered.

5. Unless otherwise mutually agreed, all meetings of the Board shall be held in the City of Montreal, P.Q., provided that the Board shall have authority to empower two or more of its members to conduct hearings and pass upon controversies when property submitted, at any place designated by the Board, provided, further, that such division of the Board shall not be authorized to make final decision. All decisions shall be made, approved, or ratified by the Board as herein provided.

6. Should a vacancy occur in the Board, such vacancy shall be filled immediately by the same appointive authority which made the original selection.

7. The Board shall render decisions on all matters of controversy arising from interpretations of wage agreements and other matters in dispute, as provided in the preamble hereof, and when submitted to the Board in accordance with its regulations.

8. All disputes including personal grievances, or controversies arising or pending under interpretation of wage agreements between officials of a railway and its employees covered by this agreement, are to be handled in the usual manner by General Committees of the employees up to and including the Chief Operating Officer of the railway (or someone officially designated by him), when, if an agreement be not reached, the Chairman of the General Committee of employees may refer the matter to the Executive Officer of the organization concerned, and if the contention of the Employees' Committee is approved by such Executive Officer, then the Chief Operating officer of the railway, and the Executive Officer of

the organization, shall refer the matter with all supporting papers to the Board, which shall promptly hear and decide the case, giving due notice to the Chief Operating Officer of the railway and to the Executive Officer of the organization of the time set for hearing.

9. No matter will be considered by the Board unless officially referred to it in the manner herein described, provided, however, that no case having origin in circumstances which occurred prior to August 7th, 1918 (date of original agreement between Canadian Railway War Board and Labour Organizations upon which Canadian Railway Board of Adjustment No. 1 was founded), shall be referred to the Board except those arising out of disputes properly pending at the above-mentioned date.

10. In hearings before the Board, the Railway shall be represented by such person or persons as may be designated by the Chief Operating Officer, and the employees shall be represented by such person or persons as may be designated by the Executive Officer of the organization.

11. All clerical and office expenses will be borne equally by The Railway Association of Canada and the Organizations above-mentioned. The railway directly concerned and the organizations involved in a hearing, respectively, will assume any expense incurred in presenting a case.

12. In each case an effort should be made by the disputants to present a joint, concise statement of facts, but the Board is fully authorized to require information in addition to such statement of facts, and may call upon the Chief Operating Officer of the railway or the Executive Officer of the organization for additional evidence, either oral or written. In event of a joint statement not being submitted, each disputant should furnish the other with a copy of his individual statement and each should give the other a copy of his supporting statement of the contention.

13. All decisions of the Board shall be approved by a majority vote of all members of the Board, except that in the event of a member of the Board presenting a case, such member shall not vote upon the decision of the case, and in order that the voting strength of each side may be equal, a member of the opposite side of the Board shall also refrain from voting.

14. After a matter has been considered by the Board, in the event a majority vote cannot be obtained, any six members of the Board may elect to refer the matter upon which no decision has been reached to a referee to be unanimously agreed upon by the Board, and in case of failure to agree, application shall be made to the Minister of Labour of the Dominion of Canada for appointment of a referee.

15. The Board shall keep a complete and accurate record of all matters submitted for its consideration, and of all decisions made by the Board.

16. A report of all cases decided, including the decisions, will be filed with the Railway Association of Canada, with the Chief Operating Officer of the Railway affected, and with the Executive Officers of the organization concerned.

17. It is further agreed that the Board shall have like authority to determine differences between any of the railways represented herein and any other classes of employees of such railways, and between any steam railway in Canada not represented herein and the employees thereof, provided that the parties to the dispute shall make joint submission of the case to the Board and shall agree that the decision of the Board shall be accepted by each party as final and binding.

18. This Agreement shall remain in full force and effect until amended or terminated in accordance with the terms of Clause 19 hereof.

19. Should it be so desired by the Railway Association of Canada, representing the railways, or a majority of

the Executive Officers of the organizations, representing the employees, this Agreement may be amended or terminated at any time during its existence upon service of thirty days' notice by the one party.

Signed on behalf of each of the above-named parties this 15th day of April, A.D., 1921.

#### APPENDIX "A"

Canadian National Railways,  
Canadian Pacific Railway,  
Dominion Atlantic Railway,  
Edmonton, Dunvegan and British Co-  
lumbia Railway,  
Esquimaux and Nanaimo Railway,  
Grand Trunk Railway,  
Grand Trunk Pacific Railway,  
New Brunswick Coal and Railway Com-  
pany,  
Quebec Central Railway,  
Temiskaming and Northern Ontario  
Railway,  
Toronto, Hamilton and Buffalo Railway.

During the period covered by this Report the following changes have taken place in the personnel of the representatives on the Board:

Feb. 8th, 1921—Mr. G. A. Kell, En-  
gineer of Safety Appliances Grand  
Trunk Railway, succeeded Mr. W.  
H. Sample, Superintendent of Motive  
Power, Grand Trunk Railway, as re-  
presentative for the Railways;

Oct. 11th, 1921—Mr. W. V. Turnbull,  
Vice-President, United Brotherhood  
of Maintenance of Way Employees  
and Railway Shop Labourers, succeed-  
ed Mr. W. M. Dorey, resigned, repre-  
senting the United Brotherhood of  
Maintenance of Way Employees and  
Railway Shop Labourers;

Jan. 17th, 1922—Mr. W. J. Babe, Vice  
President, Brotherhood of Railroad  
Trainmen, succeeded Mr. James  
Murdock, resigned, as representative  
of the Brotherhood of Railroad Train-  
men;

Oct. 10th, 1922—Mr. H. H. Lynch, Vice  
President, Brotherhood of Locomotive  
Firemen and Enginemen, succeeded  
Mr. Geo. K. Wark, deceased, as re-  
presentative of the Brotherhood of  
Locomotive Firemen and Enginemen;

June 12th, 1923—Mr. A. E. Crilly, Chief  
of Wage Bureau, Canadian National  
Railways, succeeded Mr. F. P. Brady,  
deceased, as representative of the  
Railways;

June 12th, 1923—Mr. H. T. Malcolmson,  
Superintendent, Toronto, Hamilton  
and Buffalo Railway, succeeded Mr.  
A. J. Hills, Assistant to Vice-Presi-  
dent, Canadian National Railways, as  
representative of the Railways;

July 16th, 1923—Mr. S. B. Clement,  
Chief Engineer, Temiskaming and  
Northern Ontario Railway, succeeded  
Mr. G. A. Kell, Engineer of Safety  
Appliances Canadian National Rail-  
ways, as representative of the Rail-  
ways;

Sept. 5th, 1923—Mr. C. G. Bowker,  
General Manager, Canadian National  
Railways (Central Region) succeeded

Mr. Geo. C. Jones, Manager, Canadian National Telegraphs, as representative of the Railways.

Mr. A. D. MacTier, Vice President, Canadian Pacific Railway, Eastern Lines;

*Officers elected during period:*

April 14th, 1921—Mr. Geo. K. Wark, Vice President, Brotherhood of Locomotive Firemen and Enginemen, elected Chairman of the Board (succeeding Mr. S. N. Berry), which office he occupied until his death, April 24th, 1922;

Mr. C. G. Bowker, General Manager, Canadian National Railways, Central Region;

Mr. W. J. Babe, Vice President, Brotherhood of Railroad Trainmen;

Mr. H. H. Lynch, Vice President, Brotherhood of Locomotive Firemen and Enginemen;

April 14th, 1921—Mr. Geo. Hodge, Assistant General Manager, Canadian Pacific Railway, Eastern Lines, re-elected Vice-Chairman;

Mr. W. V. Turnbull, Vice President, United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers;

June 13th, 1922—Mr. Geo. Hodge, elected Chairman, succeeding the late Mr. Wark;

Mr. H. T. Malcolmson, Superintendent, Toronto, Hamilton and Buffalo Railway;

June 13th, 1922—Mr. Ash Kennedy, Assistant Grand Chief Engineer, Brotherhood of Locomotive Engineers, elected Vice-Chairman;

Mr. S. B. Clement, Chief Engineer, Temiskaming and Northern Ontario Railway Commission;

June 13th, 1923—The terms of office of Chairman and Vice Chairman having expired, Mr. Geo. Hodge and Mr. Ash Kennedy were re-elected to their respective offices for another term.

Mr. A. E. Crilly, Chief of Wage Bureau, Canadian National Railways.

*Deceased members:*

April 24th, 1922—Mr. Geo. K. Wark;  
October 21st, 1922—Mr. F. P. Brady.

The Board at present consists of the following members:

Mr. Geo. Hodge, Assistant General Manager, Canadian Pacific Railway, Eastern Lines, Chairman;

Mr. Ash Kennedy, Assistant Grand Chief Engineer, Brotherhood of Locomotive Engineers, Vice Chairman;

Mr. J. M. Mein, Deputy President, Order of Railroad Telegraphers;

Mr. S. N. Berry, Senior, Vice-President, Order of Railway Conductors;

The accompanying condensed statement of the cases which have been submitted to the Board for consideration, and the decisions rendered in regard to them, as well as the financial statement covering the period from September 1st, 1920, to September 30th, 1923, are issued as a matter of record for the information of all concerned or interested, and in continuation of the former report issued under date of August 31st, 1920, covering the period from August 7th, 1918 to August 31st, 1920.

Copies of decisions in individual cases, giving in full details the facts and conditions involved, may be obtained on application to the Secretary of the Board, 263 St. James Street, Montreal, Que.

(Sgd.) GEO. HODGE,  
Chairman.

(Sgd.) ASH KENNEDY,  
Vice Chairman.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

## MEMO OF RECEIPTS AND EXPENSES SEPTEMBER 1ST, 1920 TO SEPTEMBER 30TH, 1923.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1.

## SECOND REPORT OF PROCEEDINGS OF BOARD.

SUMMARY OF CASES SUBMITTED TO THE BOARD FROM SEPTEMBER 1st, 1920 TO SEPTEMBER 30th, 1923.

Case No.	DATE				Parties to dispute	Question	Synopsis of decision
	Applica- tion	Papers Complete	Case Heard	Decision Rendered			
88	Nov. 4-20	Nov. 9-20	Nov. 9-20	Nov. 10-20	O.R.C. B.R.T. and T.H. & B.Rly.	Claim for payment of work performed between trips by assigned passenger crew on Port Maitland Extension.	Claim of Employees sustained. Payment to be made to the passenger crew for service in question on the basis of one day's extra compensation for each day involved at freight rates for the extra service performed.
89	Oct. 19-20	Oct. 29-20	Nov. 9-20	Nov. 10-20	B. of L.E. B. of L.F. & E. and Can. Pac. Rly. W.L.	Mountain and Valley differentials applying to electric service.	Unless otherwise mutually agreed the same differentials shall apply as between Mountain and Valley and Prairie territories in electrical locomotive service as obtain in steam locomotive service.
90	Nov. 1-20	Nov. 5-20	Nov. 9-20	Nov. 10-20	B. of L.E. B. of L.F. & E. and Can. Pac. Rly. W.L.	Hourly rate which should be paid Firemen for watching and caring for engines.	The rate paid per hour for Firemen watching engines shall be adjusted and made at least equal to one-eighth of the minimum daily rate for firemen in passenger service.
91	Oct. 15-20	Oct. 19-20	Nov. 9-20	Nov. 10-20	B.R. & S.C.F.H. & S.E., and Can. Pac. Rly. W.L.	Age limit of 18 years in connection with increase to office boys, messengers, etc.	In respect to item of the agreement the contention of the Employees is sustained.
						Retention of existing minimum for inexperienced clerical help.	With regard to Item 10 unless mutually agreed otherwise the minimum rate for clerks over 18 years of age covered by the agreement shall be \$87.50 per month and for office boys \$45 per month. To the minimum rate for clerks under 18 years of age as named in the submission shall be added \$10.20 per month as contended for by the employees. Any clerk over 18 years of age appointed to a position for which a rate is specified in the agreement shall be paid the full rate named for that position.
92	Aug. 2-20	Aug. 18-20	Feb. 8-21	Feb. 8-21	O.R.C., and Can. Pac. Rly. W.L.	Claim of Conductor for time out of service pending trial.	Conductor shall be paid for time out of service pending trial, less earnings he may have received from other employment, if any, in which he may have been engaged in the interval.

## SECOND REPORT OF PROCEEDINGS OF BOARD.—Continued

Case No.	DATE				Parties to dispute	Question	Synopsis of decision
	Application	Papers Complete	Case Heard	Decision Rendered			
93	Jan. 22-21	Feb. 7-21	Feb. 8-21	Feb. 9-21	B.R.T. and G.T.R.	Application of Rule "N" Yardmen's Schedule. Using overtime to make up guarantee of not less than 26 days per month.	On account of lack of positive evidence and other inconsistencies which developed in the case, question involved referred back to contending parties with the suggestion that further efforts be made to reach agreement on the intended application of the rule in dispute. Also suggested that if possible the parties should agree on an interpretation of the rule in question and in the event of failure to agree the matter should again be referred to the Board accompanied by definite and specific evidence which will enable the Board to reach a proper conclusion, or with a request that the Board place what, in its opinion, would be an equitable interpretation of the rule.
94	Feb. 18-21	Mch. 7-21	Apr. 12-21	Apr. 13-21	O.R.C., B.R.T., and Can. Ntl. Rlys. E.L.	Interpretation of Rule 8, Conductors and Trnmen's Schedule. Crew laid up at other than home terminals longer than 16 hours	The word "crews" in Rule 8 was and should be intended to mean "unassigned crews." This position is sustained by the fact that assigned crews have under the provisions of schedule their regular guarantee.
95	Feb. 18-21	Mch. 7-21	Apr. 2-21	Apr. 13-21	O.R.C., B.R.T. and Can. Ntl. Rlys. E.L.	Allowance for men detained between terminals.	The words "then mileage to the terminal" in Rule 17 should be understood and applied in the same manner as if such language read "then time or mileage to the terminal." Pending claims now properly before the Railways in the form of time slips or otherwise shall be adjusted accordingly.
96	Feb. 18-21	Mch. 7-21	Apr. 12-21	Apr. 14-21	B.R.T., and Can. Ntl. Rlys. E.L.	Rates for Baggage men and Brakemen in passenger train service on former Canadian Government Lines, South of the St Lawrence River, under Decision 2, U. S. R. R. Labor Board.	Position of the Railways maintained.
97	Mch. 31-21	Apr. 2-21	Apr. 12-21	Apr. 13-21	B.R.T., and T.H. & B.Rly.	Claim for run-around by Spare Brakemen on account Yd Conductors on outpost jobs changing off.	That Company should not be penalized for consideration in permitting employees at outlying points, under proper authority, to change off with each other, and claim for run-around therefore denied.

## SECOND REPORT OF PROCEEDINGS OF BOARD. —Continued

Case No.	DATE				Parties to dispute	Question	Synopsis of decision
	Applica- tion	Papers Complete	Case Heard	Decision Rendered			
98	Mch. 31-21	Apr. 2-21	Apr. 12-21	Apr. 13-21	B.R.T., and T.H. & B.Rly.	Payment of time and one-half to Yard Crews.	Arrangements should be made as far as consistent and possible to give the work of men laying off to the spare men.  The Yard crew in question were only entitled to single time for service performed on its regular assignment, and position of the Company to that extent is maintained, but Supt's letter to Chairman of Committee commits Company to payment made in specific case.
99	Mch. 31-21	Apr. 2-21	Apr. 12-21	Apr. 14-21	B.R.T., and T.H. & B.Rly.	Time lost by Yard Brakeman.	Claim denied. Board suggested that Company and Committee arrange a consistent understanding as to when successful applicants for bulletined position should be advised that they have secured the m.
100	Mch. 1-21	Mch. 3-21	Apr. 12-21	Apr. 14-21	B.R.T., and T.H. & B.Rly.	Brakeman assigned to position as Switch-Tender account inability to perform train service as result of injury.	Position of Company sustained on understanding that when conditions permit Company and Employees make an effort to place Brakeman running out of Hamilton in a position such as his physical condition will enable him to fill.
101	Apr. 2-21	Apr. 11-21	Apr. 13-21	Apr. 15-21	O.R.C., B.R.T. and T.H. & B.Rly.	Extra service assigned passenger crew on Dunville Sub-division	If, as the Board understands, the claim of the Employees is that for the service referred to, compensation should be allowed for time or mileage on the basis of passenger rates, and should not be applied against monthly guarantees, such claim is, in the opinion of the Board, and under all the circumstances and conditions applicable to this particular case, a reasonable one.
102	Mch. 10-21	Mch. 21-21	Apr. 13-14-21	Apr. 14-21	O.R.T. and Can. Pac. Rly. W.L.	Dismissal of Operator for failure in performance of his duties.	Claim of Employees denied.
103	Mch. 3-21	Mch. 21-21	Apr. 13-21	Dec. 22-21	O.R.T. and Can. Pac. Rly. W.L.	Rates of pay for Assistant Agents.	At the suggestion of representatives of the Company and Employees action deferred pending further negotiations between the Railway and Employees concerned.

## SECOND REPORT OF PROCEEDINGS OF BOARD—Continued

Case No.	DATE				Parties to dispute	Question	Synopsis of decision
	Applica- tion	Papers Complete	Case Heard	Decision Rendered			
104	June 2-21	June 10-21	June 17-21	June 20-21	B.R.T. and T. & N.O.Rly.	Request for reinstatement of Conductor, Yard Conductor and Switchman charged with theft.	After careful consideration of all written evidence placed before the Board and oral evidence given by the representatives of the respective parties, the Board's decision is that the request of the Employees for reinstatement with pay for time lost is denied.
105	May 23-21	May 26-21	June 17-21	June 20-21	O.R.C., B.R.T. and K.V.Rly.Co.	1. Date increases authorized by Sup. 16 should become effective.  2. Payment of Way Freight rates to Conductors and Trainmen in snow plow and flanger service.	1. The Board decides that the rate shall be 5.40c per mile or \$5.40 per day of 100 miles and effective date thereof is as of Jan. 1st, 1919.  2. In the case of Way Freight rates being paid Conductors and Trainmen in snow plow and flanger service the claim of the employees is denied.
106	May 23-21	May 26-21	June 17-21	June 20-21	O.R.C., B.R.T. and K.V.Rly.Co.	1. Amount to be paid per 100 miles as Mountain differential.  2. As to payment of time for switching and detention at terminals, junction points and turn - around points in addition to pay for a minimum day on runs of less than 100 miles.  3. Increasing passenger crews to not less than three men on each crew in addition to the man acting as Baggage and Expressman by placing Baggage men on these crews.	1. That 50c per 100 miles for Mountain territory differential on districts 1, 2 and 3 of the K. V. Rly. should be regarded as a consistent and equitable rate.  2. That it would be inconsistent to authorize the adoption of these rates with the understanding that an arbitrary extra allowance for switching and detention at terminals, junction points or turn-around points should be paid on runs of less than 100 miles.  3. That it would be inconsistent to order that an additional employee in the person of a baggageman or brakeman from the train service should be placed on the trains in question, and the position of the Company is therefore sustained.
107	June 21-21	June 8-21	June 20-21	June 21-21	B.R.T. and Can. Ntd. Rlys. E.L.	Appointment of General and Assistant General Yardmasters.	Employees who have actually performed the duties of Yardmaster under the titles of Gen. Yardmaster and Asst. General Yardmaster so-called, shall be paid Schedule Yardmasters' rates for time actually worked with a maximum of twelve hours for each day worked, and at schedule rates and under schedule conditions, if any, in future.

Case No.	DATE				Parties to dispute	Question	Synopsis of decision
	Applica- tion	Papers Complete	Case Heard	Decision Rendered			
117	Feb. 14-22	Mch. 1-22	Mch. 14-22	Mch. 17-22	O.R.C. and B.R.T., and Can. Pac. Rly. W.L.	Appln. of Art. 4 clause (d), 2nd & 3rd par. and Art. 15 and foot- note thereunder.	Claim of the employ- ees sustained.
118	Mch. 6-22	Mch. 11-22	Mch. 14-15 22	Mch. 16-22	B. of L.E., B. of L.F. & E., and Esq. & N.Rly.	Application of rates of pay awarded by sup- plement No. 15 to G. O. 27.	That the rates payable under the application of Sup. 15 to G.O. 27 should be the same as those effective on C. P.R. west of Revel- stoke, based on weights on drivers.
119	Mch. 6-22	Mch. 11-22	Mch. 14-22	Mch. 16-22	B. of L.F. & E. and Esq. & N.Rly.	Rate of pay on "Conso- lidated engines, Nos. 3131, 3132 and 3133.	The rate payable on the engines mentioned shall be based on the rate provided in Sup. 15 to G. O. 27 for engines having the same weight on drivers
120	Mch. 6-22	Mch. 11-22	Mch. 15-22	Mch. 16-22	B. of L.E. and C.P.R., W.L.	Claim of Engineer for time attending Court on subpoena to give evidence.	On the evidence sub- mitted and with re- spect to the specific case referred to, the claim of the employ- ees is denied.
121	Mch. 10-22	Mch. 14-22	Mch. 15-22		O.R.T. and Can. Nat. Rlys. E.L.	Responsibility for loss of Railway Cash at Ticket office.	Additional information was required before the Board could reach a decision, the case was therefore referred back to the parties. The Board was subse- quently informed that a satisfactory settle- ment had been reach- ed, and request made for withdrawal was approved by the Board.
122	Mch. 10-22	Mch. 14-22	Mch. 15-22	Mch. 16-22	O.R.T. and Can. Nat. Rlys. E.L.	Responsibility for loss of Railway cash at station.	Claim of the employ- ees denied.
123	Mch. 6-22	Mch. 6-22	Mch. 16-22	Mch. 17-22	B. of R. & S., Clerks, F.F. & Stn. Employ- ees and Can. Pac. Rly. W.L.	Appln. of Tentative A- greement, July 16th, 1921, 1. Baggage and parcel room employ- ees (other than clerks) \$20.40.  2. Providing an 8½c per hour reduction to Common Laborers or to certain employees in the Stores Dept.	1. Claim of employees denied subject to con- ditions mentioned in the general statement  2. Truckers in store rooms and stockrooms shall receive a de- crease of 6c per hour from rates in effect prior to July 16th, 1921. Other employ- ees now classified as Truckers should be reclassified as Help- ers, Laborers or other- wise, and shall re- ceive a decrease of 8½c an hour from the rates in effect prior to July 16th, 1921. This readjustment of clas- sification and of rates shall be effective from the beginning of the next pay period, name- ly, April 1st, 1922.

## SECOND REPORT OF PROCEEDINGS OF BOARD.—Continued

Case No.	DATE				Parties to dispute	Question	Synopsis of decision
	Applica- tion	Papers Complete	Case Heard	Decision Rendered			
124	May 1-22	June 7-22	June 13, 22	June 14-22	B.R.T., and Can. Pac. Rly. W.L.	Claim for run-arounds by seven brakeman.	Contention of employ- ees sustained.
125	May 1-22	June 7-22	June 13-22	June 13-22	B.R.T., and Can. Pac. Rly. W.L.	Dismissal of Trainman for violation of Rule "G."	Claim of the Employ- ees denied.
126	Apr. 24-22	June 6-22	June 13-14 -22	June 14-22	B. of L.F., B. of L.F. & E., B.R.T. and K.V. Rly.	Discipline placed a- gainst records of Con- ductor, two Engineers and two Firemen for delay to train.	That the serious delay resulting to the train in question was caused through certain mem- bers of the crew fail- ing to exercise a pro- per degree of interest in getting the train over the road and the claim of the employ- ees is not, therefore, sustained. That the discipline as applied, at least in some of the cases, is excessive and should be modified.
127	Jul. 14-22	Aug. 1-22	Oct. 10-22	Oct. 11-22	O.R.C., B.R.T. and Can. Ntl. Rlys., W.L.	Claim of Conductors and Trainmen for ar- bitrary time between Fort William and Port Arthur for all trains including pas- senger and mixed.	The claim of the em- ployees sustained in- sofar as it applies to trains to which freight rates are paid. It is understood that the decision does not au- thorize duplicate pay.
128	Jul. 14-22	Aug. 1-22	Oct. 10-22	Oct. 12-22	O.R.C., B.R.T. and C.N.R. W.L.	Claim of Conductor for terminal detention at E. D. & B. C. Block North Yard, Edmonton.	Claim of employees for terminal time in this case sustained. Road time to cease when terminal time com- mences.
129	Jul. 14-22	Aug. 1-22	Oct. 11-22	Oct. 12-22	O.R.C., B.R.T. and Can. Ntl. Rlys. W.L.	Claim of Conductors and crew for pay for snow service perform- ed at Atikokan Yard at yard rates.	That the service re- ferred to and circum- stances under which it was performed do not support the claim and it is therefore denied.
130	Jul. 17-22	Aug. 1-22	Oct. 10-22	Oct. 11-22	B.R.T. and Can. Ntl. Rlys. W.L.	Dismissal of Conductor for refusing to accept call for service.	At the hearing before the Board the parties to the controversy agreed between them- selves as to disposal and case was there- fore closed.
131	Jul. 17-22	Aug. 1-22	Oct. 10-22	Oct. 11-22	B.R.T. and Can. Ntl. Rlys. W.L.	Dismissal of Switch Foreman for being in possession of stolen goods.	Claim of Employees denied.
132	Jul. 17-22	Aug. 1-22	Oct. 10-22	Oct. 11-22	B.R.T. and Can. Ntl. Rlys. W.L.	Dismissal of Yardman for insubordination and refusing duty.	Claim of employees sustained to the ex- tent of reinstatement of yardman without pay for time lost and lost time to apply as discipline.
133	Jul. 17-22	Aug. 1-22	Oct. 10-22	Oct. 11-22	B.R.T., and Can. Ntl. Rlys. W.L.	Dismissal of brakeman for refusing duty in baggage car.	Claim of employees denied.

## SECOND REPORT OF PROCEEDINGS OF BOARD.—Continued

Case No.	DATE				Parties to dispute	Question	Synopsis of decision
	Application	Papers Complete	Case Heard	Decision Rendered			
134	Jul. 7-22	Aug. 1-22	Oct. 11-22	Oct. 12-22	O.R.C., B.R.T. and Can. Ntl. Rlys. W.L.	Claim for switching performed at Lucerne and Jasper.	Claim of employees sustained for Conductors at points mentioned and for Trainmen at point mentioned by their schedule.
135	Jul. 7-22	Aug. 1-22	Oct. 11-22	Oct. 12-22	O.R.C., and G.T.P.R.	Claim of conductor for switching and delay in the Fort Rouge terminals.	Claim of employees sustained.
136	Jul. 7-22	Aug. 1-22	Oct. 11-22	Oct. 12-22	B.R.T. and G.T.P.R.	Dismissal of Brakeman for neglecting duty.	Employees claim for reinstatement sustained without pay for time lost provided he reports for duty at Division Headquarters within forty-five days.
137	Aug. 7-22	Aug. 31-22	Oct. 11-22	Oct. 12-22	B.R.T. and Can. Nt. Rlys. W.L.	Claim of two Switchmen for time held out of service on a charge of theft.	Claim of employees sustained.
138	Oct. 4-22	Oct. 4-22	Oct. 11-22	Oct. 13-22	B.R.T. and Can. Pac. Rly. W.L.	Claim of Yard Foreman with regard to application of Art. 18 of Yardmen's schedule.	Claim of the Employees sustained.
139	Oct. 4-22	Oct. 4-22	Oct. 11-22	Oct. 13-22	B.R.T. and Can. Pac. Rly. (W.L.)	Claim of Yardman for payment for Saturday Dec. 3, 1921.	The claim of the Employees is sustained to the extent that Sunday time cannot be used to apply against guarantee. The Co. should, however, designate in the different yards according to the requirements of the service whether or not the assignment commencing late Saturday night and closing Sunday morning or the assignment commencing late Sunday night and ending Monday morning is the Sunday assignment.
140	Oct. 4-22	Oct. 4-22	Oct. 11-22	Oct. 13-22	B.R.T. and Can. Pac. Rly. W.L.	Claim of Yardman holding regular assignment for payment for days on which he was not called, being public holidays.	Claim of employees denied.
141	May 1-22	Oct. 2-22	June 13-22 Oct. 11-22	Oct. 13-22	B.R.T. and Can. Pac. Rly. W.L.	Dismissal of Brakeman for violation of Rule "G".	Under all the circumstances the Board recommends to the Co. a reconsideration of the discipline applied in this case.
142	Oct. 6-22	Oct. 10-22	Oct. 12-22	Oct. 13-22	O.R.C., and Can. Pac. Rly. W.L.	Dismissal of Conductor interfering with and threatening an officer of the Company.	Claim of Employees denied.

## SECOND REPORT OF PROCEEDINGS OF BOARD.—Continued

Case No	DATE				Parties to dispute	Question	Synopsis of decision
	Applica- tion	Papers Complete	Case Heard	Decision Rendered			
143	Aug. 15-22	Sep. 25-22	Oct. 12-24	Oct. 13-22	B.R.T., and Harbour Commis- sioners of Montreal.	Dismissal of Yard Fore- man in connection with theft of bicycle.	The Board sustained the Harbour Commis- sioners in its conclu- sion that the bicycle was lost through the interference by the foreman with police officer in performance of his duties, but con- sider that the discipl- ine should be modified to the extent of rein- statement without pay for time out of service —time lost to count as discipline.
144	June 6-22	June 17-22	Oct. 13-22	Oct. 13-22	B. of L.E., B. of L.F. & E. and T.H. & B.Rly.	Switch engines assist- ing freight trains out of Coyle Yard (Art. 28b) of schedule.	As practice of switch engines assisting thro' freight trains beyond the Coyle Yard Limit Board has been in effect since switching engine was established in the yard, the claim of employees is denied
145	June 19-22	June 23-22	Oct. 12-22	Oct. 13-22	B. of L.E., B. of L.F. & E. and T.H. & B.Rly.	Appls. of Art. 16 En- gineers and Firemen's schedule. Coaling and sanding engines at Aberdeen coaldock.	The position of the Company is sustained in the matter of en- gines in through and local freight, passen- ger and work train service. The claim of the employees is sus- tained in respect to Yard engines.
146	June 8-22	June 26-22	Oct. 12-22	Oct. 12-22	B. of L.E., B. of L.F. & E., O.R.C., B.R.T. and T.H. & B.Rly.	Claim for payment for time while writing up Michigan Central Rd. rules.	Claim of employees denied.
147	Nov. 11-22	Nov. 13-22	Dec. 12-22	Dec. 13-22	O.R.C., B.R.T. and Can. Ntl. Rlys. (W.L.)	Seniority rights of Con- ductor on Can. Nor- thern (Western Lines) Roster.	Conductor reinstated on C. N. R. Seniority list.
148	Dec. 9-22	Dec. 12-22	Dec. 12-22	Dec. 13-22	O.R.C., and Can. Ntl. Rlys. W.L.	Dismissal of Conductor for improper protec- tion of train on main line.	Claim of employees sustained to the ex- tent that Conductor reinstated without pay for time lost.
149	Oct. 21-22	Dec. 13-22	Mch. 13-23	Mch. 14-23	B. of L.F. & E., and Can. Ntl. Rlys. W.L.	Restoration of rights as hostler to man dis- missed as Locomotive Foreman for alleged violation of Rule "G".	Position of officer dis- missed not covered by schedule agreement considered outside jurisdiction of Board. Claim of Employees therefore denied.
150	Jan. 16-23	Mch. 3-23	Mch. 13-23	Mch. 14-23	B. of R.T., and Can. Pac. Rly. W.L.	Claim of Yard Fore- man and crew for road service hauling cars between Hardisty and Rosyth.	Contention of Employ- ees sustained. This not to effect in any way established prac- tices at other points.

165	May 17-23	May 28-23	June 13-23	June 15-23	O.R.C., B.R.T., and Can. Ntl. Rlys. W.R.	Claim made by Con- ductors and trainmen for minimum day in each class of service.	Claim of employees sustained.
166	June 1-23	June 13-23	June 14-23	June 15-23	B.R.T., and Can. Pac. Rly. W.L.	Claim of Conductor and crew for run- arounds while caboose to which they were assigned was under- going repairs.	Claim of employees denied.
167	June 1-23	June 13-23	June 14-23	June 15-23	O.R.C., B.R.T., and C.P.R., W.L.	Claim of Conductor and crew for time held at intermediate terminals.	It developed at the hearing before the Board that this claim was for brakeman only. Claim of em- ployees sustained.
168	June 1-23	June 13-23	June 14-23	June 15-23	B.R.T., and Can. Pac. Rly. W.L.	Claim of Conductor and crew for "run- arounds" while ca- boose to which they were assigned was un- der "running repair"	Claim of Employees denied.
169	June 8-23	June 11-23	June 14-23	June 15-23	B.R.T., and Can. Pac. Rly. W.L.	Assessment of demerit marks to Conductor for violation of speed limit rules.	The circumstances dis- closed, in the opinion of the Board, did not warrant any further action in the mater.
170	Sep. 5-23	Sep. 5-23	Sept. 11-23	Sep. 14-23	B.R.T., and T. & N.O.Rly.Com.	Manner of calculating earnings of crew in charge of passen- ger extra May 31 and June 1st, 1922.	Employees' claim that Branch Line termin- als mentioned should be regarded either as terminals or turn- around points, under the conditions stated, is sustained. The Board is of the opinion that in view of the local conditions representatives of the Commission and of the Employees are best qualified to de- cide directly between themselves as to the best practice to be followed, and recom- mend that they should decide in joint con- ference what practice should be adopted.
171	Sep. 5-23	Sep. 5-23	Sep. 11-23	Sep. 14-23	B.R.T., and T. & N.O.Rly. Com.	Manner of calculating earnings of train crew in charge of passenger extra Oct. 10, '22.	Contention of employ- ees sustained.

## SECOND REPORT OF PROCEEDINGS OF BOARD.—Continued

Case No.	DATE				Parties to dispute	Question	Synopsis of decision
	Application	Papers Complete	Case Heard	Decision Rendered			
172	Sep. 5-23	Sep. 5-23	Sep. 11-23	Sep. 14-23	B.R.T., and T. & N.O.Rly, Com.	Claim that Yardman be placed in charge of self-propelling steam crane in North Bay Junction Yard.	Insofar as it applies to the operation of crane in the Material Yard, under the conditions stated by the Commission, the claim of the employees is denied.
173	July 10-23	July 31-23	Sep. 11-23	Sep. 12-23	B.R.T., and Can. Pac. Rly. W.L.	Claim of brakeman for pay for time out of service attending Court at Wetaskiwin, Alta.	Claim of the employees denied.
174	Aug. 9-23	Aug. 9-23	Sep. 11-23	Sep. 14-23	B. of L.E., B. of L.F. & E., and Can. Ntl. Rlys. W.R.	Payment of Engineers and Firemen under Article 7 of Engineers' and Firemen's Schedule.	The Railways have the option of paying for any run as a basic day in each direction under Article 3, or as a short run in turn-around service under the provisions of Article 7. In the event of a run being paid for as a short run in turn around service, the time is continuous. On assigned runs paid as short runs in turn around service the Railways would necessarily designate the initial point of the run.
175	Aug. 9-23	Aug. 9-23	Sep. 11-23	Sep. 14-23	B. of L.E., B. of L.F. & E. and Can. Ntl. Rlys. W.R.	Payment of Engineers and Firemen under Clause "B" Article 24 of Engineers and Firemen's schedule.	Contention of employees sustained the understanding being that "Home Terminal" referred to in Art. 24, Clause "B" is the Home Terminal of the sub-division employees are working on at the time Sunday release is requested.
176	July 13-23	Aug. 9-23	Sep. 12-23	Sep. 14-23	B. of L.E., B. of L.F. & E., and Can. Ntl. Rlys. W.R.	Claim of Fireman for 900 miles—time held out of service for refusing to shovel coal ahead on tender of yard engine.	Claim of employees denied.
177	Jul. 13-23	Aug. 9-23	Sep. 12-23	Sep. 14-23	B. of L.E., B. of L.F. & E., and Can. Ntl. Rlys. W.R.	Claim for time consumed in making side trips on sub-divisions in keeping with Art. 2 paragraph "E" of Engineers and Firemen's schedule.	The Board understands the contention of the employees to be that mileage made on side trips shall be paid for as an arbitrary. The claim of the Employees sustained on the understanding that no mileage included in an assigned run shall constitute a side trip.
178	Jul. 13-23	Aug. 9-23	Sep. 11-23	Sep. 14-23	B. of L.E., B. of L.F. & E., and C.N.R., W.R.	Request that Firemen be paid 200 miles on account of being called to Winnipeg for investigation for booking rest at Pinewood, on Dec. 19th, 1922.	Under the provision of the schedule the claim of the employees is sustained.

Claim of the employ- ees denied.

## STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1923

THE number of strikes and lockouts in Canada in existence at some time or other during the month of October was three less than in September. The time loss for October was greater than in October, 1922, being 55,994 working days as compared with 54,758 working days lost in the corresponding month of the previous year.

Date	Number of disputes	Number of employees involved	Time loss in working days
October, 1923.....	14	2,497	55,994
September, 1923.....	17	1,844	35,237
October, 1922.....	18	3,240	54,758

Twelve disputes involving 912 work-people were carried over from September. One of the disputes commencing

during October terminated during the month. At the end of October, there-fore, there were on record 13 strikes, photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing compositors, Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver; motermen and conductors, Niagara Falls; longshoremen along the Miramichi River, N.B., and longshoremen at Vancouver.

One strike listed in the statistical table was reported as terminated prior to October and had not previously been so reported in the earlier issues of the LABOUR GAZETTE.

The one strike which terminated during October resulted in favour of the employees. Of the two disputes commencing during the month one was against the discharge of employees and the other for increased wages and alteration in working conditions.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one day's duration or less, and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

PRINTING TRADES IN TEN CITIES: —  
The strike of printing trades in job of-

fices in various cities, which began in the spring and early summer of 1921, for the 44-hour week, was still in progress in ten cities and involved 655 employees with a time loss of 17,685 working days.

COAL MINERS, MERCOAL, ALTA.:—On October 20, a strike of 30 coal miners occurred at Mercoal against the dismissal of two employees. It is reported that negotiations having been carried on, the men were reinstated and work was resumed on October 31.

LONGSHOREMEN, VANCOUVER, AND OTHER PORTS IN BRITISH COLUMBIA:—A strike of 1,555 longshoremen in the employ of the Shipping Federation of British Columbia occurred on October 9, for increased wages and alterations in working conditions, the agreement having expired on October 7. Negotiations were carried on but without result. The ports of Victoria, New Westminster, Chemainus and Alberni were involved. It was reported that on October 15, the port at Prince Rupert became involved but that conditions there were about normal at the end of the month. At the end of October the strike remained unsettled at the other British Columbia ports.

## STRIKES AND LOCKOUTS DURING OCTOBER, 1923.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
-----------------------------------	------------------------------	---------------------------	---------

## (3) Strikes and lockouts commencing prior to October, 1923.

## MANUFACTURING—

*Clothing:*

Clothing workers, Toronto, Ont.	.....	.....	Commenced April 16, for recognition of the union; information received indicates employment conditions no longer affected.
---------------------------------	-------	-------	--

*Printing and Publishing:*

Photo engravers, Montreal, Que.	7	189	Commenced May 2, 1921. For shorter hours. Underminated.
Printing compositors, Hamilton, Ont.	10	270	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Underminated.
Printing compositors, Montreal, Que.	10	270	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Underminated.
Printing compositors, Montreal, Que.	140	3,780	Commenced July 1, 1921. For increased wages and 44-hour week. Underminated.
Printing compositors, Montreal, Que.	12	324	Commenced September 15, 1922. Employer refused to negotiate a new agreement with the union. Underminated.
Printing compositors, Toronto, Ont.	313	8,461	Commenced June 1, 1921. For increased wages and 44-hour week. Underminated.
Printing compositors, Winnipeg, Man.	48	1,296	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Underminated.
Printing compositors, and pressmen, Halifax, N. S.	24	648	Commenced May 2, 1921. For shorter hours with same weekly wages. Underminated.
Printing compositors and pressmen, Ottawa, Ont.	80	2,160	Commenced June 1, 1921. For increased wages and 44-hour week. Underminated.
Printing compositors and pressmen, Vancouver, B. C.	11	297	Commenced May 2, 1921. For increased wages and 44-hour week. Underminated.

## TRANSPORTATION—

*Street and Electric Railways:*

Motormen and conductors, Niagara Falls, Ont.	7	189	Commenced July 2, 1922. For recognition of union. Underminated.
--	---	-----	---

*Water transportation:*

Longshoremen, Miramichi River, N. B.	250	6,750	Commenced July 9, for increased wages and shorter hours. Underminated.
--------------------------------------	-----	-------	--

## (b) Strikes and lockouts commencing during October, 1923.

## MINING, NON-FERROUS, SMELTING AND QUARRYING—

Coal miners, Mercoal, Alta	30	270	Commenced October 20, against the discharge of employees. After negotiations, the men were reinstated and work was resumed October 31.
----------------------------	----	-----	--

## TRANSPORTATION—

*Water transportation:*

Longshoremen, Vancouver, Victoria, New Westminster, Chemainus and Alberni, B.C.	1,555	31,100	Commenced October 9, for increased wages and alteration in working conditions. Underminated.
---	-------	--------	--

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING SEPTEMBER, 1923

**T**HE British *Ministry of Labour Gazette* for October contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland during September, 1923, based upon returns from employers and workpeople.

**NUMBER, MAGNITUDE AND DURATION.**—The number of trade disputes involving a stoppage of work, reported to the Department as beginning in September in Great Britain and Northern Ireland, was 29, as compared with 45 in the previous month and 31 in September, 1922. In these new disputes, nearly 7,000 workpeople were directly involved, and 2,000 indirectly involved (i.e. thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition about 45,000 workpeople were involved, either directly or indirectly, in 28 disputes which began before September, and were still in progress at the beginning of that month. The number of new and old disputes was thus 57, involving approximately 54,000 workpeople, and resulting in a loss during September of about 1,029,000 working days.

The principal dispute in progress was that involving members of the United Society of Boilermakers and Iron and Steel Shipbuilders in federated shipyards. This dispute began on April 30 and continued throughout September.

**CAUSES.**—Of the 29 disputes beginning in September 7, directly involving 600 workpeople, arose out of proposed reductions in wages; 9, directly involving 600 workpeople, on other wages questions; 8, directly involving 2,200 workpeople, on questions respecting the employment of particular classes of persons; 2, directly involving 500 workpeople, on details of working

arrangements; and 3, directly involving 2,700 workpeople, on questions of unionism and non-unionism.

**RESULTS.**—Settlements were effected during September in the case of 16 new disputes, directly involving 4,000 workpeople, and 15 old disputes, directly involving 2,000 workpeople. Of these new and old disputes, 8, directly involving 3,000 workpeople, were settled in favour of the workpeople; 12, directly involving 2,000 workpeople, in favour of the employers; and 11, directly involving 1,000 workpeople, were compromised. In the case of 11 disputes, directly involving 3,000 workpeople, work was resumed pending negotiations.

The following table analyses the disputes in progress in September in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time loss during the month in all disputes in progress:

Groups of Industries	Number of disputes in progress in September			Number of workpeople involved in all disputes in progress in Sept.	Aggregate duration in working days of all disputes in progress in September
	Started before Sept. 1	Started in September	Total		
Mining and quarrying .....	2	10	12	8,000	34,000
Metal, engineering and shipbuilding	6	4	10	42,000	953,000
Transport .....	4	5	9	2,000	19,000
Other trades.....	16	10	26	2,000	23,000
Total, Sept., 1923.	28	29	57	54,000	1,029,000
Total, Aug., 1923.	28	45	73	68,000	1,200,000
Total, Sept., 1922.	30	31	61	15,000	142,000

## PROCEEDINGS OF THE FOURTH ASSEMBLY OF THE LEAGUE OF NATIONS

---

THE Fourth Assembly of the League of Nations met at Geneva from September 3 to 29. Of the fifty-two states members of the League, forty-seven were represented at the Assembly and two new members, the Irish Free State and Abyssinia, were admitted during the session. M. de la Torriente, delegate from Cuba, was elected President of the Fourth Assembly. Canada had two representatives, Hon. Sir Lomer Gouin, Minister of Justice, and Honourable George P. Graham, Minister of Railways and Canals.

As in previous years, the work of the Assembly was divided among committees, being composed of delegates of the nations represented at the Assembly. The six principal committees dealt with the following subjects: (1) legal and constitutional questions; (2) the work of the technical organizations including the reports of the Health, Transit and Economic and Financial Organizations; (3) the reduction of armaments; (4) the budget of the League and financial questions; (5) social and general questions such as the traffic in opium and other dangerous drugs, the traffic in women and children, the protection of women and children in the Near East, problems relating to Russian and Greek refugees and the work of the Committee on Intellectual Co-operation; and (6) political questions. Sir Lomer Gouin was elected vice-chairman of the committee on legal and constitutional matters.

The Assembly made no constitutional changes, the proposal submitted to it by the British Government to amend Article 16 of the Covenant of the League of Nations being referred to the Assembly of 1924. The object of the proposed amendment is to define more clearly the criteria to be employed

when a decision is to be made as to prohibition of intercourse between the nationals of any state violating the covenant of the League of Nations and the nationals of any other state.

A second change was proposed in a resolution brought in by the Juridical Committee of the Fourth Assembly to interpret Article 10 of the Treaty to permit the Council of the League to take into account the special circumstances and geographical position of each state of the League when recommending the application of military measures as a result of aggression or the threat of aggression and to permit each state to decide in what degree it is bound to use military force in such circumstances. It will be recalled that at the First Assembly of the League, Hon. C. J. Doherty on behalf of the Canadian Government, suggested that Article 10 be struck out. This article imposes on the members of the League the obligation "to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League". The Council of the League is authorized to advise on the means by which this obligation is to be fulfilled. The Canadian amendment was referred to the Second Assembly for decision. In 1921, the Second Assembly postponed the question till the Third Assembly in view of the relation of Article 10 to the other articles of the Covenant as well as the arguments invoked both for and against its elimination. At the Third Assembly, the Canadian delegates proposed amendments to Article 10 rather than its deletion as suggested at first and the whole matter was referred to the Fourth Assembly when the above resolution was brought forward but failed of adoption. Of 43 voting, 29 voted for the resolution, one

voted against it and 13 abstained from voting. A three-fourths majority of all those present at the meeting is necessary to amend the Covenant.

The Assembly voted a budget of 23,328,686 gold francs for 1924 as compared with 25,673,508 for 1923. From this amount must be deducted the sum of 95,050 gold francs, the surplus from previous years so that the actual reduction in the 1924 budget amounts to 2,439,872 gold francs. The expenditure is allocated as follows: 12,298,449 gold francs for the Secretariat and special organizations of the League; 7,032,295 gold francs for the International Labour Office; 1,920,168 gold francs for the Permanent Court of International Justice and 2,077,774 gold francs for the working capital fund.

In regard to the reduction of armaments, the Fourth Assembly noted with satisfaction that the states members of the League, with very few exceptions, had been able to reduce their expenditure on armaments. The Temporary Mixed Commission, appointed by the 1920 Assembly of the League of Nations to investigate the problem of disarmament from the politico-economic point of view, submitted to the Fourth Assembly through its Third Committee a draft treaty of mutual assistance which, it was decided by the Assembly, should be communicated to the Governments members of the League with a request for their opinion. In accordance with the draft treaty, the contracting parties would undertake to furnish assistance to any one of their number who might be the object of a war of aggression and who had conformed to the provisions of the treaty regarding the limitation of armaments. The general guarantee of assistance might be supplemented by defensive agreements more local in scope which could be put into action more promptly but which must be approved by the Council of the League as not contrary to the spirit of the Covenant and in conformity with the general scheme of

mutual assistance. The special treaties would have to be registered with the Secretariat of the League and published in accordance with Article 18 of the Covenant. The Temporary Mixed Commission was asked by the Assembly to continue in office for one year longer in order to prepare a draft convention on the private manufacture of arms and munitions of war, to inquire into the possibility of recommending the adoption of regional agreements for the reduction of armaments side by side with the general scheme for the same purpose and to continue its statistical inquiry as a basis for the exchange of military information.

A resolution was adopted providing for close co-operation between the Health Organization of the League and the Office International d'Hygiène Publique to eliminate any danger of overlapping in this field. The Assembly emphasized the practical character of the work undertaken by the Health Organization and laid stress on the desirability of continuing and developing the system of interchanges of public health officers.

The report of the Economic and Financial Commission showed the efforts made to promote the reconstruction of certain European countries such as the preliminaries in connection with a loan for Greek refugees, the founding of a bank of issue in Albania, the reform of the finances of the City of Danzig, the measures undertaken with a view to the financial reconstruction of Austria and Hungary. An International Conference on Customs Formalities has been arranged to meet at Geneva in the near future. Consideration has been given also to the unification of legislation concerning bills of exchange and of economic statistics. An inquiry has been made into the main causes of the present economic crisis, special consideration being given to the problem of unemployment. A convention on arbitration clauses in commercial contracts was drafted by the Eco-

nomie Committee and the Assembly decided to bring it before the states for signature.

The Assembly approved the work of the Advisory and Technical Committee on Communication and Transit in regard to such subjects as the health administration of waterways, the unification of tonnage measurement, private law and statistics in inland navigation, the supervision of the opium traffic in free ports, customs formalities in air-transport, plans for an international radio-telegraphic conference, and the restoration and improvement of means of communication in Europe. As a result of the activities of this Committee a General Conference on Communications and Transit is to meet at Geneva on November 15th. The questions to be discussed by the conference include four draft conventions, one on the international regulation of railways, one on the international regulation of seaports, one on the conveyance of electric power and one on the exploitation of hydro-electric power on waterways passing through the territories of more than one state.

In connection with the Committee on Intellectual Co-operation, twelve committees have been formed in different countries to serve as correspondents to the League Committee. The Assembly endorsed a resolution recommending the extension of the system of national committees and the proposal that certain members of the Secretariat of the Committee should form an International University Information Office. The activities of this office would include the publication of information received from the various universities regarding curricula, etc., and the arranging for the exchange of students and professors.

The Assembly expressed gratification with the progress made in the mandated territories especially with the work of effecting an improvement in the moral and material condition of the natives and, in particular, of the women

and children. The French mandate for Syria and that of Great Britain for Palestine are now in full operation. Matters regarding the protection of minorities in Latvia, Lithuania, Estonia, Albania and Poland were dealt with during the year by the Council of the League and reported to the Assembly.

On the recommendation of the Advisory Committee on Opium and other Drugs, the Assembly approved the proposal for two international conferences on the drugs question. One conference is to be for the gradual suppression of opium-smoking and will be attended by representatives of states holding territory in the Far East. The second conference will deal with the limitation of the production and manufacture of morphine, heroin and cocaine to medical and scientific needs.

A resolution was adopted approving the appointment of a small body of experts to inquire into the conditions under which the traffic in women is carried on, the expenses of this investigation to be borne by certain American organizations especially interested in this work. The Assembly also endorsed the recommendation that women should be employed among the police dealing with prostitution.

In connection with the reports of the League Commission of Inquiry on the subject of deported women and children in the Near East, the Assembly voted 75,000 gold francs for the continuance of the work in Constantinople and Aleppo.

The Council of the League, in accordance with a resolution of the Third Assembly has been making an investigation in regard to slavery but the available information was not deemed sufficient to form the basis of a report and it was decided, therefore, to continue the investigation with a view to presenting to the Fifth Assembly a report showing the progress made in different countries with regard to the suppression of slavery in all its forms. Proposals were made for inter-govern-

mental co-operation in connection with relief to populations stricken with calamities and for international arrangements for civil justice for the poor, the latter subject to be placed on the agenda of the Fifth Assembly. Offices for legal assistance to the poor exist already in Britain, Germany, France,

Denmark, Italy, Sweden, Norway and the United States and are supported by public or private funds. The establishment of relations between the different offices would have in view the possibility of enabling people without means in foreign countries to obtain legal assistance.

## ..SIXTH SESSION OF THE INTERNATIONAL LABOUR CONFERENCE (LEAGUE OF NATIONS)

### Questionnaires dealing with various items of the Conference Agenda.

**T**HE Governing Body of the International Labour Organization (League of Nations) have submitted to the governments of the States members of the organization questionnaires with reference to the items on the agenda of the sixth session of the International Labour Conference, which will be held at Geneva in June, 1924. The items on the agenda are as follows:

(1) Development of Facilities for the Utilization of Workers' Leisure.

(2) Equality of Treatment for national and foreign workers as regards Workmen's Compensation for accidents.

(3) Weekly Suspension of work for Twenty-four hours in Glass-manufacturing Processes where Tank Furnaces are used.

(4) Night Work in Bakeries.

The questions submitted on these subjects were as follows:

#### Utilization of Workers' Leisure

1. Do you consider that it is desirable to submit to the Conference a detailed text of a Recommendation concerning the principles to be followed and the methods to be adopted in order to ensure profitable utilization of workers' leisure?

2. Do you consider that the Recommendation should suggest the adoption by the Governments of measures to prevent the workers from doing paid work during the leisure hours secured to them by the legislation on hours of work?

What measures would in your opinion be calculated to achieve this object?

3. Do you consider it advisable to recommend measures for the preservation of the leisure of the workers?

(a) By a better organisation of transport facilities.

(b) By a housing policy.

(c) By arranging for the day's work to be carried out in one spell without any extended break.

(d) By other means, and, if so, what?

4. Do you consider that, with a view to a more profitable utilisation of leisure, Governments should be recommended to adopt general measures of social hygiene?

5. Would it be desirable to indicate in the Recommendation the institution best suited to assist workers to develop their economic, physical, intellectual and social life by profitable utilization of their leisure?

6. Are there any types of institution to which you consider it specially desirable to draw attention?

7. Do you consider that general principles might be laid down for the guidance of Governments, employers and workers?

(a) Should it be definitely stated that the workers should retain complete liberty in regard to the institution set up for the utilization of leisure?

(b) Should the nature of the assistance to be given by public authorities, employers and private associations be indicated?

(c) How may moral and financial support be organised?

(d) Would it not be desirable, in order to co-ordinate the efforts of Governments, em-

ployers and workers, to recommend the institution of local or district committees composed of representatives of the different parties concerned?

### **Equality of Treatment for national and foreign workers as regard Workmen's Compensation for accidents**

(1) Do you consider it desirable that the Conference should adopt a Draft Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents? Do you consider that equality of treatment should be established without any conditions of reciprocity, or that it should be restricted to States which ratify the Convention and which thus mutually undertake to accord to nationals of the other States which are also parties to the Convention the same treatment as is accorded to their own nationals?

Or do you consider it preferable that each State should be invited to recognise, by means of separate Conventions with other States, equality of treatment for the nationals of such States, subject to reciprocity and if necessary to adaptation of the national legislation in the countries concerned? If so, do you consider that the decision of the Conference should take the form of a Draft Convention or a Recommendation?

(2) Do you consider it necessary to stipulate in the Draft Convention or Recommendation that no differentiation of treatment shall be made as regards foreign workers or their representatives by reason of the place of their domicile or residence?

(3) Do you consider it necessary to insert in the Draft Convention or Recommendation a provision authorising some differentiation of treatment as regards foreign workers or their representatives on account of special circumstances? If so, what, in your opinion, are the circumstances in which such differentiation might be authorised?

(4) Do you consider it desirable to insert in the Draft Convention or Recommendation a clause providing for the possibility of transferring funds from which annuities are to be paid to workers or their representatives who have ceased to reside in the country liable for the payment of compensation? What are the conditions and reservations which might, in your opinion, govern the carrying out of such a transfer?

(5) Do you consider that the Draft Convention or Recommendation should contain a provision requiring the authorities concerned to lend each other mutual assistance with a view to ensuring the enforcement of the law relating to workmen's compensation for accidents? Or do you consider it necessary that the Draft

Convention or Recommendation should define more in detail the methods of such mutual assistance?

In the latter case, what particular provisions do you suggest?

(6) Do you consider that the Draft Convention or Recommendation should contain a clause exempting the relevant documents, certificates, etc., from fees or taxes beyond those payable in the country of origin?

(7) Do you consider that the Draft Convention or Recommendation should provide that any modifications made in the law or regulations relating to workmen's compensation for accidents, particularly such as affect the amount of compensation payable, should apply to foreign workers or their representatives on the same conditions as to national workers?

(8) Do you consider that the Draft Convention or Recommendation should contain special provisions regarding certain classes of foreign workers, such as the travelling staff of international railways, or staff belonging to undertakings carried on in two or more countries and temporarily employed in a country which is not their headquarters?

(9) Are there any other provisions which you consider should be included in the Draft Convention or Recommendation?

### **Weekly Suspension of Work in Glass Factories**

1. Do you consider it desirable that the Conference should adopt a Draft Convention providing that in glass works where tank furnaces are used operations and classes of work which are not necessarily continuous from the technical point of view shall be suspended for 24 consecutive hours per week?

2. If you consider it impossible to prescribe in the Draft Convention that in the whole or part of the glass industry operations and work which are not necessarily continuous from the technical point of view shall be suspended for 24 hours each week, what other period of suspension do you consider might be fixed by the Draft Convention, and to what branches of the glass industry should it be applied?

3. Do you consider that this suspension of work should, in principle, take place on Sunday, subject to the special conditions in particular countries?

4. Do you consider it desirable that the Draft Convention should contain a provision explicitly excluding from its scope such operations and classes of work as must necessarily be continuous for technical reasons?

If so, please give for each of the different branches of the glass industry (sheet glass works, glass bottle works, hollow glass works,

plate glass works, etc.) a list of the operations and classes of work which you consider should be excluded.

5. Do you consider that permanent exceptions should be allowed to the general rule suggested under (1) for certain special operations or classes of work such as preparatory or complementary work which, while not being necessarily continuous from the technical point of view, must be carried on during the rest period accorded to the staff as a whole?

Do you consider that a list of the classes of work or operations in the different branches of the glass industry to which such permanent exceptions should apply should be inserted in the Draft Convention or should be drawn up by the competent authorities in each country? If you favour the first alternative, please indicate the classes of work concerned.

6. Do you consider that these permanent exceptions should be approved after consultation with the organizations of employers and workers concerned, if any?

7. Do you consider that provision should be made for temporary exceptions to the general rule suggested under (1):

a) in cases of *force majeure*;

b) in cases of exceptional pressure of work?

8. Do you consider that temporary exceptions on account of exceptional pressure of work should be approved after consultation with the organisations of employers and workers concerned, if any?

9. Do you consider that a period should be allowed before the Convention comes into force? What period do you suggest, and what transitional measures do you consider should be taken during such period?

### Night Work in Bakeries

(1) Do you consider it desirable that the Conference should adopt a Draft Convention on night work in bakeries?

(2) Do you consider that such a Draft Convention should lay down prohibition of night work in bakeries?

If so, what is the length of the nightly rest period which should in your opinion be laid down by the Convention?

(3) To what classes of undertakings do you consider that the prohibition should apply?

Do you consider that the prohibition should apply to all classes of establishments or that it should be restricted to certain classes only? Which classes would you propose to exclude?

(4) To what categories of persons do you consider that the Convention should apply?

(5) Do you consider that exceptions to the prohibition of night work should be laid down?

(a) Permanent exceptions for the execution of preparatory and supplementary work;

(b) Temporary exceptions in the case of a seasonal or temporary influx of population, e.g. during the period of seasonal activity in pleasure or health resorts, during local festivals, fairs, markets, etc.; on grounds of public interest, e.g. for supplies to the Army, etc.; in the case of repair work, accidents and *force majeure*.

(6) Do you consider that the Convention should contain a clause authorising the authorities in each country to grant permanent exceptions to the prohibition of night work in favour of undertakings where work is organised on industrial lines and which employ more than a certain number of persons? In what way do you consider that night work in such undertakings should be regulated (e.g., limitation of night work to one week in three?)

---

## TWENTIETH SESSION OF GOVERNING BODY, INTERNATIONAL LABOUR OFFICE

THE Twentieth Session of the Governing Body of the International Labour Office was held at Geneva on October 15 to 18, under the chairmanship of Mr. Arthur Fontaine, (France). The Government of Canada was represented by Mrs. Carruthers (Miss Violet Markham) and the workers of Canada by Mr. Tom Moore, president of the Trades and Labour Congress of Canada. The report of the Director on the work

of the office during the previous three months was received and discussed.

The Director was instructed to have prepared a complete report on the practical application in all countries of the principle of the right of association for all lawful purposes laid down in part XIII of the Peace Treaty, showing the legislation dealing with this question and the interpretation of this legislation in jurisprudence and in practice.

The Governing Body considered the action of the Italian Government in convoking an international conference to study emigration problems, and the Director was asked to place at the disposal of the Italian Government the large mass of material on this subject which the Office had collected.

In order to afford ample time for preparatory work the Governing Body considered what questions it was desirable to place on the agenda of the International Labour Conference of 1925. It was decided, subject to possible revision next January, to include in the agenda of the 1925 conference a discussion of the general principles of social insurance and the special question of industrial accidents. The Director was instructed to prepare for the January session a concise summary of existing legislation in practice in various countries in regard to social insurance, with special reference to accident, unemployment and health insurance. It was decided that formal despatch of the agenda should not take place until after the January session.

A report was received from the committee appointed to make recommendations "as to the means of furthering the ratification of the Eight Hours Convention". The Committee recommended that the countries which desired to ratify this convention but had been unable to do so be requested to indicate the

precise nature of their difficulties and the changes which they suggested. This recommendation was opposed by the Workers' delegates and the Governing Body decided not to take any action in the matter.

The recommendations of the Advisory Committee on Agriculture with regard to vocational training of agricultural workers, workers' co-operation in agriculture, and the prevention of anthrax infection in flocks were adopted. It was agreed that the report of the meeting of experts held in July at the International Labour Office with reference to the problem of finding employment for disabled men should be sent to the governments for information.

A proposal for the establishment of a correspondent of the International Labour Office in Canada was referred to the budget commission of the Governing Body for examination and report.

At this session Mr. Arthur Fontaine, the French government delegate, was unanimously re-elected president. Mr. Carlier (Belgium) and Mr. Oudegust (the Netherlands) were re-elected vice-presidents for the employers and workers respectively.

It was decided that the next session of the Governing Body should open on January 29, and the 1924 session of the International Labour Conference on June 16.

---

## ANNUAL CONVENTION OF THE AMERICAN FEDERATION OF LABOUR

---

### Synopsis of Proceedings of Forty-Third Annual Convention at Portland, Ore.

**T**HE forty-third annual convention of the American Federation of Labour was held at Portland, Ore., from October 1 to 13. The convention was formally opened with a prayer by Rev. Walter Taylor Sumner, following which were addresses of welcome from Mr. G. A. Von Schrilitz, president of the Portland Central Labour Council; Mr. George L. Baker, Mayor of the city of

Portland; Mr. Walter N. Pierce, Governor of the State of Oregon, and Mr. Otto Hartwig, president of the Oregon State Federation of Labour. The addresses were acknowledged by Mr. Samuel Gompers, president of the Federation.

The report of the committee on credentials indicated that there were present 361 accredited delegates, representing 89

international and national unions, 4 departments, 22 state branches, 57 central bodies, 11 local trade and federal labour unions. Five fraternal delegates were also in attendance. The total membership, according to the report of the Executive Council, is 2,926,468. This report, which dealt in detail with the activities of the organization and the various questions of importance to the organized labour movement, together with the resolutions submitted, was assigned to the appropriate committee for consideration.

The report of the Audit Committee, which was adopted, detailed the financial transactions of the Federation for the sixteen months' period from April 30, 1922, to August 31, 1923, and showed that the total receipts, including the balance from the previous year, amounted to \$884,675, while the total expenses were \$662,398.84, leaving a balance on hand of \$222,276.16 included in which was \$15,000 in Canadian victory bonds. A statement was also presented showing the amounts contributed by affiliated organizations in response to appeals for funds to aid sister bodies and also for certain schemes of the federation.

The five fraternal delegates to the convention who conveyed the greetings of their respective organizations were (1) Mr. James A. Sullivan, from the Trades and Labour Congress of Canada; (2) Messrs. R. B. Walker and W. C. Robinson, from the British Trades Union Congress; (3) Miss Mathilde Lindsay, from the National Women's Trade Union League of America, and (4) Miss Anna Fitzgerald, from the Women's International Union Label League. In addition to the messages given by these delegates, addresses were delivered to the convention by the following: Mr. Frank Hodges, J. P., secretary of the Coal Miners' Federation of Great Britain; Mr. John W. Brown, secretary of the Educational Department, International Federation of Trade Unions; Mr. John L. Lewis, president of the United Mine Workers of America; Mr.

George L. Berry, president of the International Printing Pressmen and Assistants' Union; Mr. Spencer Miller, Jr., secretary of the Workers' Education Bureau of America; Mr. Eugene T. Lies, representing the Playground and Recreation Association of America; Mr. J. J. Handsaker, representing the Near East Relief; Rev. H. L. Bowman, D.D., representing the Portland Council of Churches; Capt. Charles P. Plummer, senior Vice-Commander, American Legion, and General Frank T. Hines, director, United States Veterans' Bureau.

The following is a synopsis of the action of the convention on the more important reports presented:

#### Report of Committee on Organization

To the committee on organization were assigned several matters dealt with in the report of the Executive Council and also a number of resolutions. Among the latter was one which had an important Canadian aspect in that it had as its objective the amalgamation of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (an international organization) and the Canadian Brotherhood of Railroad Employees (a national union). These two organizations represent relatively the same classes of railway employees, and the resolution considered that this factor "operates to a very serious extent against the best interests of the members of both these organizations and against the cause of labour in Canada". The resolution went on to recount the previous history of this amalgamation proposal and how it failed of consummation due to the organizations "not being able to agree on a satisfactory interpretation of the provisions". In conclusion, the resolution urged an intensive campaign in Canada whereby these classes of railroad workers would be organized into the international brotherhood. The committee recommended, and the convention concurred, that the matter be referred to the Executive Council "for favourable consideration and action in bringing

about one organization of the craft, provided the funds of the Federation permit”.

Upon that part of the Executive Council's report under the caption "The Business Cycle and Unemployment", the convention, on the recommendation of the committee, concurred with the statement of the Council that "the most potential factor against unemployment is the resistance against wage reductions" which "mean the abridgment of the power to purchase, to consume and to use the products of labour". As regards that part of the Council's report dealing with "Attacks on Trade Unions", the committee reported as being in accord with the opinion of the Council that "the president of the A. F. of L. should continue to acquaint labour organizations of the true status of the fight of unfair employers for the 'open shop' and their humiliating defeat".

Four resolutions — all dealing with various problems affecting the organization of the office workers, and urging, particularly, the inclusion of the women workers of New York city and the bank clerks in the union of Bookkeepers, Stenographers and Accountants — were referred to the Executive Council by the Committee with the recommendation, concurred in by the convention, that assistance be given in organizing those eligible for admission into this union.

The committee recommended, and the convention sanctioned, a resolution calling for the re-affirmation of the Federation's support of the acceptance of travelling cards, or other evidences of membership in good standing, from any affiliated organizations in lieu of an initiation fee.

Support of the Laundry Workers' Union (in its efforts at rehabilitation) and to the American Federation of Teachers, in order that the teaching profession be brought "into intimate contact with the ideals and aims of the American Federation of Labour" was

recommended by the committee and endorsed by the convention.

Acting on a resolution submitted, the convention, on the recommendation of the committee, unanimously pledged its support to the campaign (inaugurated by the executive council of national and international organizations in the steel industry affiliated with the A. F. of L.) against the 12-hour workday, the Federation to place active organizers in the field to assist in the campaign.

The convention also approved of certain resolutions in favor of aiding various crafts in their organization efforts.

To the committee on organization was also assigned a resolution calling for the compulsory affiliation of locals of international unions to state and central bodies. This resolution was debated at some length after the committee, in re-affirmation of the action of the Cincinnati convention, had recommended non-concurrence. The resolution was then again referred to the committee in order to give the city, central and state body representatives an opportunity to go into the matter more fully. The result of further deliberation did not alter the committee's original recommendation of non-concurrence on the ground that the compulsory features of the resolution in so dealing with national and international unions was foreign to the spirit and composition of the A. F. of L. which is itself a voluntary association of national and international unions. The convention supported the committee's recommendation.

#### **Report of Committee on State Organizations**

Among the matters dealt with by the committee on State Organizations were the sections in the Executive Council's report concerning "the minimum wage law" and "women in industry". The problems dealt with under these headings were directly affected by the decision of the United States Supreme Court which invalidated the Minimum Wage Law for the District of Columbia.

Believing that this decision "has weakened and perhaps eliminated the protection which wage earning women had received from legislation of that character", the Executive Council reiterated its position that "the only agency in which wage earning women could place absolute confidence is economic organization"; and urged that a more thorough organizing campaign be inaugurated among women workers. The committee agreed with this proposal, and suggested that a conference be called of all international and national trade unions in which women workers are eligible. With respect to that portion of the Council's report dealing with the subject of "Women in Industry", the committee also recommended intensive organization, but advised that the Executive Council continue to study the legal aspect of the problem created by the decision. The convention adopted the recommendation of the committee on these two subjects.

On recommendation of the committee the convention expressed approval of the activities of the various state federations of labour in securing the enactment of legislation favourable to the workers "and their determined resistance in preventing the enactment of laws inimical to the working men and women".

Among other recommendations which were adopted were (1) that Congress grant rural letter carriers an equipment allowance as well as establishing a more favourable wage schedule for these employees; (2) urging upon state and federal legislatures "the necessity for a co-ordinated public development and control of water resources for the service of the people at cost".

#### Report of Committee on Boycotts

The report of the committee on boycotts was adopted as a whole by the convention. It contained a number of resolutions, advocating support and encouragement to several unions in their

opposition to the introduction of non-union shop conditions or wage reductions.

#### Report of Committee on Labels

The recommendations contained in the adopted report of this committee included: (1) the utilization by all national and international unions of a union label on all union stationery; (2) that, for the guidance of delegates at future conventions, the officials of the entertaining central labour council should distribute, prior to the meeting of the assembly, printed lists of all fair and unfair establishments in the hotel, restaurant, barbering and mercantile trades; (3) urging the co-operation of all trade unionists in support of the activities of the Women's Union Label League and Trades Union Auxiliary.

#### Report of Committee on Education

*The Fight Against Child Labour.*—In conformity with its persistent advocacy of laws prohibiting child labour, this question once again received considerable attention from the convention. President Gompers in his opening address made this matter one for special emphasis. He termed it "the vital question of the hour", and regarded it as significant that the Supreme Court of the United States had declared the Child Labour Law as unconstitutional after Congress had passed the measure. He summarized the importance of the question in this sentence: "There can be no greater menace to the progress and civilization of our time than the sacrifice of young and innocent children upon the altar of Mammon". In reporting its action on the matter, the Executive Council outlined the steps taken since President Gompers convened a meeting of representatives of all organizations directly interested. As a result of that meeting on June 1, 1922, there was organized the Permanent Conference for the Abolition of Child Labour. The Cincinnati convention of the American Federation of Labour, which met in June, 1922, debated the

matter and declared in favour of an amendment to the constitution of the United States that would prohibit the labour of children under the age of 16 years, and would confer on Congress the power to raise the minimum age below which children shall not be permitted to work. This section of the Executive Council's report, was referred to the Committee on Education. This committee, in noting the progress made to amend the constitution, observed that, "as a result of these activities (of the Executive Council) the Senate Judiciary Committee of the Congress of the United States has recommended that Congress shall have power concurrent with that of the several states to limit or prohibit the labour of persons under the age of eighteen years". The committee made recommendation in which the convention concurred, that the Executive Council be instructed to continue its efforts to secure the adoption of this proposed child labour amendment.

*Workers' Education.* — The Committee on Education also had in hand that part of the Executive Council's report dealing with the activities of the Federation's Permanent Committee on Education. As a result of negotiations between the Permanent Committee and the Workers' Education Bureau there has been inaugurated a programme of specific educational enterprises for wage earners with the A. F. of L. forming an integral part of this bureau. The committee, in reporting to the convention on the action of the permanent body, recommended that the workers, through the channels thus provided, participate in the study classes; and it also urged the further development of the workers' education movement through the establishment, by each state Federation of Labour, of a permanent educational department to co-operate actively with the Workers' Educational Bureau. These recommendations were adopted.

Among other adopted recommendations arising out of those portions of the

Executive Council's report submitted to this committee were: (1) urging upon the States of the Union the use of free text books in the public schools where no such provision now exists; (2) the inclusion of social studies in public school curricula; (3) the maintenance of the existing cordial relationship between the American Federation of Labour and the American Legion; (4) the establishing, by all affiliated bodies, of co-operative bureaus to promote "the preliminary work of education in reference to the *bona fide* Rochdale co-operative movement"; (5) the participation by labour in the application of intelligence tests in any industrial establishment; and (6) the endorsement of the information and publicity bureaus and the news service conducted by the A. F. of L.; (7) favouring the practice of observing the fourth Sunday in May as Labour's Memorial Day, the first Monday in September as Labour Day and the day preceding as Labour Sunday.

*Expulsion of Delegate Dunne.* — The Committee on Education also reported on the statement covering the activities of the Federated Press, a news distributing agency which admits to its membership "publications representing all factions and wings of the labour movement". Authorized by the Cincinnati convention, the Executive Council, during the year, conducted an investigation into the reportorial and news policy of the Federated Press. In the report as submitted by Executive Council it was stated that "an analysis of issue after issue can only lead to the conclusion that the Federated Press lends itself continuously to the spreading of doctrines subversive of the best interests of the American working people as expressed in the *bona fide* trade union movement and that this condition is going to continue". Considering this conclusion, the committee reported as follows: "Upon the basis of these findings we feel impelled to recommend that this convention adopt the findings as its own and issue warning to the

trade union movement in general and to the labour press in particular to be on guard against the insidious encroachment of subversive propaganda either through the Federated Press or any other channel".

Delegate Matthew Woll, of the Photo Engravers' Union, in speaking on the motion, referred to "a publication coming under the terms of condemnation" expressed in the committee's report. That publication was the "Butte Bulletin", edited by Delegate William F. Dunne, of the Silver Bow Trades and Labour Council, whom Delegate Woll denounced as having "direct connection with the Communist Party" and "as playing for the Soviet and Moscow government, has not right in this convention as a trade unionist". Immediately following the adoption of the committees' report a motion was made that the convention revoke the credentials of William F. Dunne and unseat him as a delegate. The roll call ballot resulted in 27,837 votes in favour of Dunne being unseated and 108 votes against, with 643 votes not cast.

*Against formation of Labour Party.* — One of the important debates of the convention occurred on the subject of a labour political party, embodied in four resolutions (all of which were dealt with by the Committee on Resolutions) in favour of the establishment of a distinctive independent labour political party. Since its formation, the political attitude of the A. F. of L. has been one of non-partizanship to political parties. By so doing, the Federation has sought to advance the interests of the labour movement by supporting at the polls only those candidates, regardless of their party affiliation, who were known to favour legislation beneficial to the working people, and opposing candidates known to be luke-warm or hostile to labour legislative demands. The chief objective of the Federation has been organization along industrial and economic lines, and when political action has been taken it has not been

directed through party channels, but as outlined above. According to the resolution submitted, this political policy of the Federation in supporting its friends and opposing its enemies, had not been productive of the desired result. The committee in dealing with these resolutions either dismissed them entirely or recommended non-concurrence, and emphasized that the economic organization and power of labour should not be impaired. The committee considered that "the policy and practice of the American Federation of Labour to be partizan to principles and not to be partizan to political parties has been fully justified by experience". This re-affirmation by the committee of the traditional policy of the Federation in regard to politics was debated at considerable length and resulted in a roll call vote as follows: For adoption of the committee's recommendation, — 25,066 votes; against, 1,895 votes; with 1,628 unrecorded votes.

#### Report of Committee on Resolutions

Mention has already been made elsewhere in this article of the protest of the convention against the action of the Supreme Court in nullifying the child labour law and the minimum wage law. The action of the Supreme Court with respect to this legislation was the subject of a section of the Executive Council's report in which was outlined "the necessity for making the Supreme Court of the United States more responsive to the will of the people as expressed by them through their legislative representatives at Washington". This section of the report was referred to the Committee on Resolutions. The committee in its recommendation re-iterated the attitude of the Cincinnati convention, which had directed the Executive Council to secure enactment of legislation whereby Congress would have power to re-enact by a two thirds vote any law declared unconstitutional by the Supreme Court. In addition, the committee urged that "efforts be made likewise to have all judges of our

federal government including the Justices of the United States Supreme Court, elected by the people for fixed periods of time, rather than having them selected without the will of the people and for their life time". In this the convention concurred as it also did with a resolution, sponsored by the committee, with the same objective in view.

The Executive Council's reference to "Evolution in the Trade Union Movement", was also referred to this committee. This section gave a review of the labour movement in its later development and contained a warning against revolutionary propaganda, having for "its ultimate purpose not only the destruction of the trade union movement but the eventual overthrow of the democratic government of the United States" by means of a campaign, "the catch-word of which was amalgamation". In addition to this section of the Executive Council's report, three resolutions urging industrial organizations instead of the present plan were also referred to it. The committee disapproved of the resolutions, and, in reporting on the Executive Council's view on the matter, pointed out the methods by which the A. F. of L. brought together such unions as desired closer affiliation. With regard to the "amalgamation" advocates, the committee considered that such were endeavoring to effect disruption rather than affiliation. The committee re-affirmed, supported by the convention, a former declaration, urging recognition and application of the principle of autonomy for the unions concerned.

Among some of the other matters referred to this committee, either as extracts from the report of the Executive Council or in the form of resolutions, and the decisions arrived at concerning the same, were:

*Ku Klux Klan.* — The committee characterized this organization as a "hideous and sinister movement that proudly calls itself the 'invisible empire', cloaking itself in masks and mum-

mery while it eats at the heart of our institutions". In its recommendation, the committee regarded "it as an American duty and a trade union duty of the highest order for trade unionists to shun this conspiracy and to conduct themselves as Americans worthy of a democratic government".

*The Fascisti Movement.* — The effort to organize Fascisti groups in the United States was denounced as a "token of hostility to our democratic institutions and particularly to our American trade union movement". Foreign workers were called upon to refrain from the joining the Fascisti or any other similar movement.

*Railroads and the Courts.* — Under this caption in the report of the Executive Council was a detailed account of the litigation arising from the strike of the railway shopmen, the injunction issued against the strikers, and the question of remedial legislation. As regards the securing of favourable railroad legislation, the committee commended the arrangement to create a railroad labour policy committee for the purpose of initiating and considering all railroad labour proposals. The committee also denounced the Railway Labour Board as being "a constant menace to the freedom and well-being of the railway workers, and that its early elimination would be but a belated act of justice".

*Repressive Legislation, Judicial Decisions and Decrees.* — The report of the Executive Council, under this heading, generalized upon what was termed "repressive legislative and judicial tendencies". In this category was listed the Sherman Anti-Trust Law, the Coronado case, the question of "government by injunction" and "yellow dog contracts". On all these, the committee noted that legislative demands are in the making "which contemplate the wiping out of these repressive laws together with all suppressive decisions, predicated on this sort of legislation".

*Ship Subsidy.* — The committee commented favourably on the defeat of the ship subsidy bill in the United States Senate, and it attributed this defeat to "the watchful attitude of the American Federation of Labour".

*Department of Labour.* — Scoring the attempts made to "destroy the work and efficiency of the Department of Labour" the committee urged that "labour's demands for a still more efficient and extensive department of labour be impressively submitted to the President of the United States and to our national congress".

*Conscription.* — The convention endorsed the protest of the Executive Council against what was regarded as an enactment providing for the application of conscription (without exemption) to industrial occupations even in time of peace.

*Compensation for Occupational Diseases.* — The convention adopted the recommendation of the Executive Council that efforts be continued to secure the enactment of legislation providing for compensation for occupational diseases in the District of Columbia. The reason for this action was because of a decision of the comptroller general of the treasury to the effect that under the workmen's compensation act those who suffered from occupational diseases in the District were not entitled to benefits.

*Old Age Pensions.* — A resolution was introduced on this subject and the decision of the convention in support of the same was that officers of the Executive Council and representatives of affiliated national and international unions be authorized to investigate "the several state constitutions with particular reference to the enactment of appropriate legislation with a view to the establishment of old age pensions".

*The Mooney Case.* — The committee recommended concurrence in a resolution calling upon the convention to peti-

tion for the unconditional pardon of Thomas J. Mooney and Warren K. Billings, convicted of participation in a bomb outrage and serving life sentences. The convention adopted the resolution on the ground that the innocence of these men had long since been established.

*The Federal Eight-Hour Law.* — A resolution was adopted concerning the amending of this piece of federal legislation, enacted in 1868, and thereby making provision for a more general application of the law to contracts let by the United States Government.

*Suffrage in District of Columbia.* — Action on a resolution dealing with this question resulted in a decision to ask every national and international union to write to their federal representatives urging the introduction of legislation whereby the right of suffrage would be extended to the District of Columbia.

*Suppression of the Drug Traffic.* — The convention decided to present a resolution for this purpose before the Federal Government with the request that it be transmitted to the governments of other nations.

*Recognition of Russia Opposed.* — Considerable debate resulted from the refusal of the Committee on Resolutions to recommend concurrence in a resolution urging "the government of the United States to take steps leading to the resumption of official trade relations with Russia and the eventual recognition of the Russian Government". In its report, the committee reviewed the previous declarations of the A. F. of L. on the matter, and found that at no time did the Federation show any "feeling of indifference to those unfortunate people". However, the committee considered that as a prior condition of recognition "the people of Russia be given a full and free opportunity to determine the character of government that shall guide or control their destiny". Until this condition was complied with the committee believed that such action as

was called for by the resolution was "unwarranted and unjustified"; and therefore non-concurrence was recommended.

Several delegates disputed the action of the committee, and in their addresses took the ground that the truth about Russia had been distorted; that several other countries have favored recognition of the Russian government though not in sympathy with its aims and objects; that propaganda had been manufactured in New York to prejudice the American people against the Russian government; that, on the ethical basis of brotherhood and for humanitarian reasons, the helping hand should be extended to Russia through the medium of official recognition.

President Gompers and Delegate M. Woll defended the report. The former pointed out that "in Russia there is no such thing as free speech, no criticism against Sovietism permitted, no publication of a newspaper or a pamphlet that does not yield obedience and loyalty to Sovietism".

Continuing his castigation of Communism, President Gompers said in part:

If the people of Russia are willing to submit to this dictatorship I pity them, but I have no quarrel with them; if the Soviets, by a power usurped by them, keep the people in subjection so that they cannot express themselves and change the form of government, I can have no quarrel with them, they will have to fight it out among themselves; but when that government undertakes to rule not in its own country alone, but undertakes to destroy the republic of the United States, I must protest. . . .

When that declaration was made by the Soviets, and I challenge any man within hearing of my voice to dispute the statement that the policies and declarations of the Soviet government have been and are the destruction of all democracies in the world, and particularly the democracy of the United States, and as a condition precedent to the accomplishment of that purpose it is necessary to destroy the American Federation of Labour. . . .

Give encouragement and hope in any way to those now in military control of the people of that unhappy country, and you help to perpetuate the system now prevailing there...

Can we expect those people, with 85 per cent of them illiterate, unable to read or write, who in their shop windows have to paint crude signs to indicate to the passerby the things they have for sale inside, can we expect them to be the leaders of thought and philosophy of the world? Are they to lead and we to follow?

Upon conclusion of President Gompers' speech a request was made for a roll call vote, but it was not supported by the necessary number of delegates. The report of the committee was supported by a very large majority.

#### Report of Committee on Executive Council's Report

*Workmen's Compensation Law.* — Commissioned by the Cincinnati convention to conduct an inquiry into the present status of Workmen's Compensation and Employers' liability laws, the Executive Council presented a partial report on this subject which was referred to the Committee on Executive Council's Report. In covering in detail the broad scope of the subject, the committee emphasized that "private insurance companies have interfered with and seriously retarded progress in the field of workmen's compensation and employers' liability laws", and recommended "the rigid exclusion from this field of the private insurance company". The committee was favourably impressed with the features contained in the Ohio Workmen's Compensation Law, and pending the complete report of the Executive Council on this subject, it recommended that the following eight points "be given full weight in the preparation of any compensation law or amendments to the same": (1) Employees in all occupations to be protected. (2) Work-accidents and occupational injuries and diseases to be compensated. (3) Benefits to be provided only by state insurance funds. (4) Such surgical care, hospital service, orthopedic appliances and artificial limbs as may be necessary to as complete physical restoration as is possible. (5) Compensation for widows for life

or until remarriage. (6) Compensation for life for permanent and total disability. (7) No waiting period. (8) Vocational rehabilitation. The convention adopted these recommendations.

*The Volstead Act.* — With regard to this question, which was also referred to the above-mentioned committee, the American Federation of Labour has gone on record as being in favour of such modification of the existing law as will permit the manufacture and vending of wholesome beer and light wines. The chief result of the committee's deliberation on this matter was a reaffirmation of the action of former conventions. In its report, the committee considered that "the efforts at enforcement of the Volstead Act have produced results that in themselves are so far from being what was promised or reasonably expected might follow the adoption of the Eighteenth Amendment", and therefore recommended "a more reasonable interpretation of the Eighteenth Amendment", urging the Legislative Committee to use all reasonable efforts to effect such a modification in the statute.

*Proposed Investigation of Industrial Workers of the World.* — One of the important recommendations from the Committee on Executive Council's Report was that concerning the activities and propaganda of the Industrial Workers of the World in the United States. In its report the committee outlined the "intensive propaganda in travelling, printing and speaking at an expense which obviously has not been gathered from actual or prospective members of the cult". The report also charged that "there are I. W. W.'s at the top of our industrial world, and that these are very influential and much more dangerous than the I. W. W.'s among the working people". In conclusion, the committee considered "that it is essential for the preservation of our organization, our labour movement and our form of government that these facts should be carefully investigated", and

that authoritative reports should be made to the American people, especially the working people. The convention, accordingly, instructed the Executive Council to conduct such an investigation and make a report to the next convention of the Federation.

In the discussion which ensued, Delegate Madsen, of the Longshoremen's Union, charged that there was collusion between certain employers and the I. W. W. The delegate declared that he could "easily trace the unholy alliance that exists between certain employers and the I. W. W." and he regarded those employers as being "as guilty and responsible for the conditions that exist on the Pacific Coast and throughout the country as any other one factor". The Convention unanimously adopted the recommendation to conduct an investigation.

*Lady Barbers Barred from Union.* — A resolution was presented urging that the Executive Council use its good offices in order that lady barbers might be admitted to membership in the Journeymen Barbers' International Union of America, or failing in this that federal charters be granted to such groups of lady barbers as made application for the same. The sponsors of the resolution advocated its adoption on the basis that one of the cardinal aims of the American Federation of Labour was the organization of all wage earners regardless of race, creed, color or sex. The Committee on Executive Council's Report in recommending non-concurrence, which was approved by the Convention, emphasized that there was also entailed in the resolution a question of union autonomy and jurisdictional rights, and consequently, rejected the proposal, stating that "it would be an unwarranted invasion on the part of the convention to undertake to prescribe to an affiliated organization the character or qualifications of its membership".

The substance of other projects endorsed by this committee and approved

by the convention were: (1) the undertaking of more extensive organization among migratory workers; (2) urging of continuous effort for fire prevention; and (3) the supporting by the individual membership and all affiliated organizations of the A. F. of L. National Non-Partisan Political Campaign.

#### Report of Committee on Shorter Work Day

In submitting its report the committee on a shorter work day considered that in the realization of a shorter work day the destructive effects of unemployment would be eliminated. One of the resolutions dealt with by this committee was a plea for assistance from all affiliated bodies of the A. F. of L. to aid the textile workers in the Southern States in their fight for a forty-eight hour work week. Another resolution urged convention support to the extension of the Saturday half holiday in government establishments. Both resolutions were approved.

#### Report of Committee on Laws

The chief recommendations of the committee dealing with the constitution and by-laws of the Federation had to do with amending the constitution so that the Executive Council would have authority to change the venue of the convention if it found that proper facilities for the holding of the same were lacking in the city named by the assembled delegates; and also the changing of the date of the convention, during the years of presidential elections, from the first Monday in October to the third Monday in November. After some debate, these resolutions were adopted.

#### Report of Committee on Legislation

The report of the committee on legislation was made under several captions. As regards immigration, the Committee expressed itself as being in favor of a more stringent policy under which immigration would be curtailed below the present quotas. The committee also reaffirmed the position of the A. F. of L. on the subject of Asiatic exclusion, the convention concurring in both these matters.

Under the caption of "Convict Labour", the committee recommended that the Executive Council call a conference of the representatives of affiliated trade unions, affected by the competition of convict labour "with a view of devising effective means of abolishing this menace".

Under the heading of "Labour Legislation" the committee reported on a number of measures enacted into law by the 67th Congress together with a number of other proposed laws which were defeated through the vigilance of organized labour.

With respect to the "Civil Service Retirement Law", the committee urged remedial legislation to correct what it regarded as inadequacies in the present Federal retirement system. In addition, the committee viewed with favour the passage of the Classification Act whereby "the annual fight for the continuation of the bonus for Federal and District of Columbia employees will be no longer necessary", the bonus, under the provisions of this act, becoming a part of the base pay.

#### Report of Committee on International Labour Relations

In dealing with the Executive Council's report on the subject of the International Federation of Trade Unions, the committee on international labour relations noted that there had been no change in the attitude of the International Federation toward meeting any of the objections raised by the American Federation of Labour, and which were conditional upon affiliation. The committee, however, recommended continuance of negotiations" in the hope that opportunity may yet be had for affiliation with the organized workers of the old world".

The committee also commented favorably upon the efforts of the Pan-American Federation of Labour in developing understanding between the masses of the people of the United States and the countries to the south, especially in

regard to Mexico where much has been accomplished toward ending official estrangement.

A resolution outlining alleged inhuman conditions prevailing in Venezuela was before the convention, and it was decided to refer the allegations to the president of the American Federation of Labour with instructions to appear before the President of the United States and the Secretary of State, placing before them the conditions complained of.

#### Report of Committee on Adjustment

Two controversies over jurisdictional matters were submitted, in the form of resolutions, to the committee on adjustment. In the case of the dispute between the International Brotherhood of Electrical Workers and the Brotherhood of Railway Signalmen of America, in which the former claimed that the latter were engaged in organization coming under jurisdiction agreed upon as belonging to the signalmen, the committee reported that an arrangement had been effected, after conference, whereby the two parties agreed to meet in Chicago in February, 1924. The convention approved of this arrangement. The other

dispute involved the International Union of Steam and Operating Engineers and the Quarry Workers International Union over men engaged in the operation of engines in quarries. The Committee heard both parties to the dispute and recommended that jurisdiction over these workers be accorded to the union of steam and operating engineers. In the report of the Executive Council, reference was made to its activities in endeavoring to adjust certain jurisdictional controversies which had engaged its attention.

#### Officers for 1923-1924

The election of officers, resulted as follows: President, Samuel Gompers; first vice-president, James Duncan; second vice-president, Joseph F. Valentine; third vice-president, Frank Duffy; fourth vice-president, Wm. Green; fifth vice-president, T. A. Rickert; sixth vice-president, Jacob Fischer; seventh vice-president, Matthew Woll; eighth vice-president, Martin F. Ryan; treasurer, Daniel J. Tobin; secretary, Frank Morrison.

El Paso, Texas, was chosen as the convention city for 1924.

---

### ANNUAL CONVENTION OF CANADIAN FEDERATION OF LABOUR

THE Canadian Federation of Labour held its fifteenth annual convention on September 24 to 26, at Ottawa, representatives of the following trade unions attending: Bricklayers', Plasterers' and Masons' Federation, Quebec; Plasterers' Local No. 3, of Montreal; Trades and Labour Council of Montreal; Electrical Trades Union, of Ottawa; Labourers' Union of Quebec; Plasterers' Union, No. 2, of Quebec; Trades and Labour Council, of Calgary; Canadian Street Railwaymen of Toronto; Electrical Trades Union of Toronto; Canadian Pattern Workers Union, of Tor-

onto. President David Giroux, of Montreal, occupied the chair.

The convention unanimously approved a proposal introduced by the Calgary Street Railway Employees Union and the Trades and Labour Council of Calgary, that a western subsidiary council of the Federation should be established, provided that the new subsidiary council should not interfere with the *per capita* tax due to the central Federation. The western delegates pointed out that the new branch council was for the purpose of routine business and organization only, and that many western trades would likely be enrolled provid-

ing funds, and an organizer conversant with working conditions in the west, were available.

The federal government will be asked to change the date of Labour Day from the first Monday in September; and to establish a fund to provide loans for workingmen's homes.

A resolution from the Labourers' Union of Quebec in regard to the authorization of strikes, was approved, to the effect that in the event of any difficulty arising with the employers, a report shall be made by the men to the executive board of the Federation, who shall confer with the local executive, and the two executives may jointly order a strike, but in no case may the local stop work without such consent having first been obtained.

A fee of 50 cents was required to be paid in future by members introduced by chartered locals of the Federation, in addition to the initiation fee, the ex-

tra fee to be forwarded to the treasurer of the Federation. On the suggestion of the committee on laws it was decided that all vicepresidents must visit the unions in their district every three months, and report on conditions to the president. The salaries of the president and secretary remain as formerly, namely, \$250 per annum for the president, and \$360 for the secretary, payable quarterly.

Officers for the coming year were elected as follows: president, David Giroux, Montreal; first vice-president, G. W. Potts, Toronto; second vice-president, R. Hasey, Calgary; third vice-president, P. Normandeau, Montreal; fourth vice-president, A. Poulin, Quebec, Que.; secretary-treasurer, C. J. Whitley, Toronto. The provincial vice-presidents appointed by the president are: G. W. McCollum, Ontario; A. Marois, Quebec; and W. Barrett, Alberta.

The place of next meeting will be selected by the executive committee.

## SESSION OF THE INTERNATIONAL TYPOGRAPHICAL UNION

**T**HE sixty-eighth session of the International Typographical Union was held at Atlanta, Ga., on August 13 to 18, under the presidency of Mr. Charles P. Howard, with 263 delegates present representing a membership of 68,144.

The Secretary's report to the convention showed a decline in membership of 602 during the year, which it was claimed might be due in part to the strike assessment. The receipts for the fiscal year ending May 31, 1923, were \$7,530,814 and the expenditures \$6,765,115. Over \$5,000,000 was spent for strike benefits and the general running expenses of the organization; \$823,434.63 for old age pensions, \$394,235.40 for death benefits, and \$245,321.70 for the Union Printers' Home. All the funds showed an increase except the pension fund in which there was a decrease of \$121,834.35. The

increase in the general fund was \$593,905.35 and that of the mortuary fund \$309,974.14. The total number of residents in the Union Printers' Home during the year was 2,532 or a monthly average of 211, and the average cost per month per resident was \$66.82.

The amount received from Canadian unions during the year was \$373,242.48 apportioned as follows: \$284,053.10 to the International Fund; \$35,984.20 to the Pension Fund; \$17,189.70 to the Union Printers' Home and \$36,015.48 to the Mortuary Fund. The benefits drawn amounted to \$1,805,612.84 including \$14,150 from Mortuary Fund; \$1,753,542.84 from the strike fund; and \$37,920 from the pension fund. (It is stated that these figures do not show the sum expended to maintain Canadian members at the Home, the expenses of representatives in Canada, the soldiers'

dues refunded to them, or the special assistance given the typographical conference on the Canadian side of the line).

The president reported that on May 20, 1923, there were on strike rolls 3,118 members in ninety-five jurisdictions, of whom 2,660 were reported as drawing benefits as compared with 5,962 members on strike rolls in 126 jurisdictions on November 1, 1922. On January 28, 1923, the assessment rate contributed by the members was reduced from 5 per cent to 3 per cent which was collectible for a period of sixteen weeks, until May 20, at which time it dropped to 2 per cent. At the end of May there were on strike in Canada 999 members embracing the following jurisdictions; British Columbia with 18 on strike; Nova Scotia with 38; Manitoba with 97; Quebec with 301; and Ontario with 545. He stated that since the beginning of July 1922, 148 unions were reported to headquarters as having negotiated new contracts providing for increases over former rates. These include newspaper offices at Toronto, newspaper and job offices at Brantford, newspaper offices at Montreal (English), newspaper offices at Ottawa and newspaper and job offices at Sarnia. A number of unions are also listed as having maintained the wage scale provided for in the previous contract either through negotiation of a new agreement, extension of old, or by permitting conditions to continue under what is generally termed an oral agreement. Among these are mentioned newspaper and job offices at St. John, N.B.; Brandon, Man.; Kitchener, Ont.; Kingston, Ont.; Sydney, N.S.; and Regina, Sask. The total number of unions providing for a work-week of less than 48 hours, including 7 unions which provide for the shorter week for operators only, are stated to be 233. These include 19 Canadian unions as follows:

Local No.	No. of hours
Alberta—	
Calgary, 449 .....	45
Edmonton, 604 .....	45
Lethbridge, 551 .....	45
Medicine Hat, 451 .....	44
British Columbia—	
Nanaimo, 337 .....	44
Nelson, 340 .....	45
New Westminster, 632 .....	45
Prince Rupert, 413 .....	44
Vancouver, 226 .....	45
Vernon, 541 .....	44
Victoria, 201 .....	45
Manitoba—	
Winnipeg, 191 (night, 43½).....	46
Ontario—	
Hamilton, 129 (night, 45).....	47½
Kingston, 204 .....	47
London, 133 (night, 42).....	44
Ottawa, 102 (night, 43½).....	46½
Toronto, 91 (night, 45).....	46½
Saskatchewan—	
Prince Albert, 705 (night, 42).....	44
Swift Current, 726 (night, 42).....	44

The president stated that the statistical bureau authorized at the 1922 convention had been established at headquarters for the purpose of properly equipping committees of local unions and assisting them when arbitration is undertaken, and that the success attained even in the early stages of the work attested the importance of continuing the work.

In dealing with the subject of apprenticeship, he claimed that it cost more to make competent printers in trade schools than in the composing room where machinery and equipment are available without large unproductive investments, and journeymen printers act as instructors without permitting such added duties to interfere with their output. He described the steps already taken by the International Typographical Union for the training of apprentices. He explained that units of a linotype school have been established in a number of cities. (One of the most recent and most successful is the school started in Nashville, Tenn., in co-operation with the local typographical union). One purpose of the project, he stated, was to transform the surplus of union printers

made idle by the increased use of machines into machinist-operators, and thus furnish competent help in plants which have one or two typesetting machines, and another was to reduce the number of members out of employment whom it has been necessary to maintain upon strike rolls. The Typographical Union had maintained a correspondence course of apprentices for a number of years. It was desired, however, to extend the scope of the educational programme and to hasten results. Mr. Howard pointed out that the laws of the union on apprenticeship were based on recognition of the fact that the printshop is the place to learn the printing business. Young men who can afford to pay for education will not spend years learning a manual trade, but will direct the efforts toward learning a profession, which is the reason the Typographical Union feels called upon to devote time and money to the task of educating apprentices.

A number of changes were made in the by-laws respecting apprentices at the convention. Provision was made for semi-annual instead of annual examination of apprentices, and for making it compulsory for apprentices in their last three years to take the lessons in printing, that apprentices in their last two years must attend at least 50 per cent of all regular union meetings in order to qualify for full membership; and that all applicants for membership shall be required to pass a practical and technical examination given by the apprentice committee of the subordinate union to which such application is made.

Among the resolutions adopted were the following:

That provision be made in scales where possible for adjusting complaints as to insanitary conditions in workrooms by a joint committee representing the local union and the employers.

That the board of trustees be authorized to make an allowance of \$1 per week to members of the International Typographical Union resident at the Union Printers' Home.

That the board of trustees of the Union Printers' Home make a full investigation into the merits of the claims for improved treatment of tuberculosis advanced by the different schools of medicine.

That all candidates for office either union or public, be compelled to declare at least five articles of wearing apparel bearing the union label, local unions to enact laws in conformity therewith.

That subordinate unions give closer attention to the letting of contracts for public printing, the status of the bidders, and where they receive the business that gives their plants financial standing.

That the executive council be instructed to consider the purchase of a central business property at the headquarters city for the dual purpose of providing union offices and a reasonable return on the money invested.

That the executive council make an investigation to ascertain the advisability of dealing directly with the general offices of the Western Newspaper Union, and thus avoid the present condition of part of a company's composing rooms being "rat" and part union.

That local unions within a radius of 500 miles from the place where a strike has occurred be notified through a weekly bulletin, keeping them as fully informed as possible on the conduct of said strike, the expense to be borne by the International Typographical Union.

That the convention strongly urges the executive council to resist any attempt to call off the fight for the forty-four hour workweek; and that strike benefits be continued to all original striking members who cannot be placed in situations in accordance with the laws of the International Typographical Union.

That the International Typographical Union endorse the work of the joint conference on retirement of government employees and pledges its support in bringing about an increase in wages and better working conditions for employees in the government printing office of the United States.

That a committee of three be appointed by the president with the approval of the executive council to make a complete inquiry into the workings of the old age pension and mortuary benefit funds, and to report at the next convention of the International Typographical Union.

That the executive council co-operate with the local unions in the northwest that are menaced by so-called "schools of printing" and afford such local unions every aid and support, in securing information as to the activities of such schools and informing the membership generally on the developments as they occur.

## CONDITIONS IN THE COAL MINING INDUSTRY IN THE UNITED STATES

### Reports of the United States Coal Commission

A number of reports were issued by the United States Coal Commission in October in addition to those which have already been summarized in the LABOUR GAZETTE (*see* LABOUR GAZETTE, October, 1923, pages 1054 and 1130 and

previous issues). These include a study of labour turnover in the bituminous coal industry, an examination of wage rates, a study of underground management in bituminous mines, and a report of investments and profits in anthracite mining.

### Labour Turnover in the Bituminous Coal Mining Industry

With regard to labour turnover the summary and conclusions of the Commission were in part as follows:

The study of labour turnover in the bituminous coal mines of the country for 1921 shows all varieties and extremes when looked at mine by mine and district by district. The study has shown percentages ranging from 7 per cent in a sizeable mine in Northern Ohio to 459 per cent for another in North-eastern Kentucky. It has shown contracts for districts ranging from 30 per cent for Michigan to 224 per cent for the Kenova-Thacker region of West Virginia.

For the country as a whole the degree of turnover for the industry does not appear to be greater than that which is accepted as the common experience of industries generally. The result for the 691 mines studied for the year 1921 are as follows: Total average on rolls, 122,048; all separations on rolls, 121,840; turnover percentage, 99.9.

As was pointed out in the report on turnover in the anthracite industry this does not differ greatly, and in fact is less than the experience of industrial concerns during 1913-14 and 1917-18. Brissenden and Frankel\* in their study of turnover in some 160 varying concerns found an average for 1913-14 of 115 per cent. For 1917-18, a wartime year, the turnover averaged, they found, was 180 per cent. Their tables show that it was uniformly the experience for larger employers to have the lesser rate of turnover. For concerns employing less than 1,000, which are more comparable in size to coal mines, the 1913-14 average for 29 concerns was 146 per cent and the 1917-18 average for 67 concerns, 221 per cent.

\*Labour Turnover in Industry, MacMillan, 1922.

The anthracite report also gave the turnover percentages from a 1921 study of 11 industrial establishments in Philadelphia, made by the Industrial Research Department of the Wharton School of the University of Pennsylvania. The turnover percentages of these were as follows: 22, 36, 41, 59, 64, 110, 66, 140, 145, and 183.

The general experience of the bituminous industry in 1921 does not differ greatly from that of the anthracite industry during the same year. The medium percentages for the three anthracite districts were as follows: Lehigh, 55, Schuylkill, 115, Wyoming, 100. The average for the three districts would not be far from the 1921 figures for the bituminous industry since Lehigh, though it has the least turnover, is much the smallest of the anthracite districts.

However, most progressive industrial establishments giving attention to the costs of labour turnover are not content with seeing a 100 per cent per annum figure. A certain amount of labour turnover is undoubtedly healthful to an organization, but it would seem that there is somewhere, though unestablished, a point of stability that lends to the greatest productiveness. Concerns maintaining a turnover percentage less than 50 per cent consider that a most satisfactory figure. . .

The opinion of some non-union operators is that the men move quickly if work becomes slack and there is the faintest rumor of work elsewhere. The shifting rates of pay, from mine to mine, probably induce some of this movement among workers, seeking the best rate or the best working advantages.

In any event, such high rates of turnover as exist in some of the non-union districts are certainly unhealthful from a managerial point of view. If organization morale, familiarity

with the establishment, and settled community make-up have any value, the waste is certainly high in such districts as Logan where but 25 per cent of the mine work force is stable or steady throughout the year, and the turnover runs up to 230 per cent per annum.

The mixed union-non-union districts of Tennessee and New River-Winding Gulf (W. Va.) present a peculiar contrast to the extremes of the union and non-union districts. The turnover percentage in Tennessee is shown as 122, and that of the New River-Winding Gulf, 148. The non-union district has a greater percentage than Tennessee and four less than New River-Winding Gulf. No union districts have higher percentages than these two.

Within the districts, however, there do not appear to be any marked differences in the experiences of non-union and union mines. . .

The study has shown some contrasts in the turnover among the occupational groups. For the 691 mines covered the percentages of turnover for the five occupational groups are as follows:

	Average No. Total Turnover on rolls separations per cent		
Machine miners...	5,171	3,916	75.7
Pick miners.....	30,807	29,763	96.6
Loaders .....	39,891	43,825	109.8
Inside day men...	30,874	28,534	92.4
Outside day men..	14,646	15,032	102.6

The lowness of the figures for the machine miners may be explained by the fact that this is

preferred work and that earnings are probably better in this group. The loaders perhaps have the hardest task in mining, and this would explain in a degree the higher rate in this group. Some surprise may be occasioned by the fact that the turnover is greater among outside day men than inside day men. It has been something of a popular belief that men preferred to work above ground. This 10 point difference is not explainable from data available. It is of interest to note that the median percentage of stability in the 33 districts is 59 for inside day men and 65 for outside day men. . .

The study has shown chiefly these things:

1. That the turnover for the industry as a whole is not remarkably high, as compared with other industries, although it is excessive in some districts.

2. That for various reasons labour much more unstable in non-union districts than union districts.

3. That in mixed non-union and union districts the turnover percentage occupies a middle point between the extremes of the other two.

4. That the turnover among machine miners is noticeably lower than that for the other two tonnage worker groups, pick miners and loaders.

5. That the turnover is higher among outside day men than among inside day men, although the stability is greater in the first group.

### Underground Management in Bituminous Coal Mining

In the report on underground management the Commission expresses the opinion that reduction can be made in the cost of production through improvement of operating methods without any reduction in wage rates by development and efficient application of mechanical devices to replace hand loading; better control and coordination or underground operations, particularly cutting, loading and haulage; standardization and coordination of the work of the individual mine worker; standardization of details of construction and dimensions of mine cars, locomotives, track and all other equipment; and multiple shifting of work in the mines and preparation plants, thus obtaining greater production with the same plant investment.

In the detailed report on this subject the above principles are amplified and

a brief description is given of the prevailing methods of carrying on the work, with an account of the duties of the mine foreman who is the chief underground official. It is noted that the bituminous coal mining industry is just entering on the last stage of reducing manual labour through the introduction of machinery. Among the mines observed two were practically machine operated in the cutting, drilling and loading. This change, it is claimed, will reduce the cost of coal at the mines by 30 per cent and will automatically eliminate the high cost mines and the wagon mines which by absorbing so large a portion of the transportation service lower the working time of the better mines thus unduly increasing their costs.

### Investments and Profits in Anthracite Mining

In its report on investments and profits in anthracite mining the Commission states that because this business is one of markedly varying costs, and because, therefore, some operators pay very large dividends while others pay very small ones or sometimes none at all, there is no single figure that represents either the profit per ton or the percent return on investment.

The margins per ton were found to vary between extremely wide limits. Three operators reported a margin in excess of \$1.50 per ton in the year 1921, while eight other operators reported a loss of over \$1.50 per ton in the same year. The latter, however, were very small producers contributing only one per cent of the total output while the former mined 7.6 per cent of the total. Thirty-nine operators reported for 1921 either no margin of profit or a sales realization less than cost.

The principal facts found by the commission were summarized as follows:

1. No average figure either of margin per ton or per cent return on investment can fairly represent the profit in anthracite mining. Because of great inequalities in cost and in selling arrangements some operators make very large profits and others very small profits. The margins per ton between cost and sales realization in ordinary times range from less than nothing to over \$2.00 a ton. The per cent return on book value of investment in coal ranges all the way from a loss to 138 per cent. (One independent operator, year 1917).

2. There has been a very large increment in value so that the lands are now worth on the market more than they used to be although a third of the coal is gone. The Commission could not obtain the original cost of more than one or two of the properties. It did find that the present book values contain certain "Write-ups" or revaluations of assets amounting to at least \$186,000,000 and in addition there were memorandum accounts kept for Federal Tax purposes indicating further appreciation of \$40,000,000.

3. The latest of the foregoing revaluations, however, was as of 1913. Since 1913 a further huge increment in market value has accrued to the owners of the property.

A committee of engineers appointed by us estimates the present market value of mines and minerals as \$989,000,000. The book values, allowing for companies and holdings not examined by the accountants, are in the neighborhood of \$600,000,000. This indicates a further increment of hundreds of millions of dollars inuring to the owners if the engineers' estimates based on earnings are accepted.

4. The profits are increasing. Total net income is increasing, dividends are increasing, and surpluses are increasing, earned surpluses as well as surplus arising through revaluations. The margin per ton is increasing.

During the year, 1922, when there was a five-months strike, the average total f.o.b. mine cost for the year as a whole exceeded the sales realization of the operators. Their margins per ton for the last quarter of 1922 and the first quarter of 1923 were the largest on record. Though the market conditions of 1923 are not expected to last, it is found that the present margins show a large increase over pre-war, even after deducting federal taxes.

5. Labour cost and other costs also show a large increase over pre-war figures, but the increase in price has been such that the operators margin since the war has on the whole been about the same percentage of the sales realization that it used to be.

6. The practice of many companies of carrying large reserves of coal lands held for future use, adds to costs through taxation and conceals profits. The largest of the railroad coal companies—the Philadelphia and Reading—a high operating cost company—is overburdened with reserves sufficient to last more than two hundred years. On this total investment it has shown an inadequate return, the loss having been made up by the large earnings of the affiliated railroad. Freed from the carrying charge of this excess reserve it could make an adequate return.

The amount of the increment in value of coal lands is a matter deserving careful consideration, not only with respect to anthracite but also with respect to bituminous coal. If this increase in market value is to continue indefinitely piling up carrying charges to be added to current prices an intolerable burden will be laid on the consumer. Taxes and interest on coal not to be mined within forty years are not properly chargeable to present operations. Speculation in land should not be confused with mining coal.

The following recommendations were made:

1. In order to permit the public as a whole to share in the good fortune of the low cost, high-profit operator, we recommend that differential taxation shall be applied to differential advantage. Sweeping horizontal cuts cannot be made in present mine prices and margins without serious injury to many high-cost operators, whose output is needed. Taxes falling lightly on the low-profit operator and more heavily on the high profit operator in proportion to his ability to pay will benefit the consumer indirectly through lightening the tax burden elsewhere and will accomplish this without raising prices.

2. To protect the public against un-

justified increases in price, we recommend complete publicity of accounts through a Federal agency with power to compel reports, and to prescribe the form of accounts.

Because of the large increase in operators' margins per ton since the strike of 1922, and the possibility of further increases in price as a result of the recent settlement, we believe that such current publicity as to costs, margins and profits should begin at once. Unless the public is protected by publicity of accounts, we are apprehensive that the concentrated control of the industry may take indefensible profits.

3. The consumer has in his own hands a measure of protection against unreasonable profits. We commend to consumers the use of substitute fuels.

### Wage Rates in the Bituminous Coal Industry

The report on wage rates was in part as follows:—

Two outstanding factors have exerted a profound influence on the character of the wage structure. The over development of the bituminous coal industry has been the most important factor. During the past twenty years the annual working time in the industry as a whole has averaged more than 200 days. With the exception of the years 1917 and 1918 which reflected the stimulus of war conditions the number of days lost annually has not been less than 72 days, and in periods of market inactivity the number of idle days has frequently risen to over 100, reaching a maximum of 150 days of lost operation in 1921. High tonnage rates for piece workers and high day rates for men paid by the day have thus been necessitated in an effort to secure an adequate annual wage during the days of the years on which employment is available.

This factor of over development, therefore, has had a profound influence on the general level of the wage structure. But the effort to overcome the factor of a short annual working time by a compensatory wage level has failed to meet the problem satisfactorily, because of this very over-development and the different way in which it affects different mines. Thus, if 200 days were an average annual working period and all mines approximated anywhere close to this average, a wage which would give an adequate annual earning for 200 days work would solve the difficulty from the wage earners point of view. But unfortunately this has not been the case. In a year averaging 200 days, many mines may not work over a 100 or 125 days, while other mines have operated well up towards 300 days. A wage based on the 200 day average, therefore, gives very high earnings to the men fortunate enough to

be in the mines operating nearly the full working days of the year, while it fails to give adequate annual earnings to those who find themselves in the group of mines working 100 days. If these marked differences in days of operation were confined to separate fields, that is, if practically all mines in one field worked a large number of days while practically all those in other fields work a smaller number of days, the pressure for increased rates of pay would not be felt equally in both fields, but would exert itself most strongly in the fields with the fewest number of working days. But the differences in working time are not thus marked and segregated by the limits of different fields. The greatest contrast may be found between mines in the same field. One mine with natural advantages and which has secured contracts for nearly its whole output may work steadily throughout the year, while neighbouring mines almost within sight of this mine, may be shutting down over half the time because of inability to compete in the common markets. The result, therefore, has been for this pressure of increased rates to be felt throughout the entire organized field.

The wide differences in physical conditions of operation and of availability of markets has, however, entered into the fixing of wage rates and has been a second strong factor in fixing a differential in wages in different districts of the unionized fields. It has been a marked tendency of collective bargaining in some industries to bring about standard rates for organized occupations over large territories. This has been particularly marked in recent years in the railroad world where organization has brought about a condition in which in many instances the men in a given occupation receive exactly the same wage everywhere in the United States. In contrast to this the mine workers organization, as far back as

1886, agreed with the operators on the principle that differential rates would have to be agreed upon in order to enable the poorer mines to continue in competition with the better mines.

The agreement of 1886, known as the Columbus agreement, was signed by operators and miners of Illinois, Ohio, Indiana, Western Pennsylvania, and West Virginia. The following year, these states, with the exception of West Virginia, drew up a new scale. The states named have come to be known as the Central Competitive Field. The interstate agreements were of short duration. Friction arose among the operators. It was alleged that Ohio because of her large representation at the conferences was favoured in the established wage scales. In Illinois, the Grape Creek operators of Danville, claiming that the wage scale forced too high a mining price on them, locked out their employees. A series of strikes were declared which spread throughout the state. Wage cuts followed.

In 1888, Illinois, because of internal dissension, was unable to become a party to the agreement of the year. The following year Indiana was compelled to withdraw; Ohio and Western Pennsylvania maintained agreements until 1890 and made persistent efforts to hold prices and rates until 1894.

With the termination of the interstate agreement in 1888 prices were immediately cut in a wild effort to gain and hold markets. From that year until 1898 there was a succession of strikes in the central competitive field. By 1897 the industry was practically disorganized. The average days worked for the entire industry for the three-year period 1894-96, inclusive, were 186. (*Mineral Resources of the U. S.*, 1917, Part II, p. 932). Wages had received heavy cuts and profitable production was practically impossible. A strike was called in 1897 which spread throughout the central competitive field. This strike resulted in the joint conference of 1898 and an interstate agreement which established a basic eight-hour day and mining prices and rates for the basing districts of Illinois, Indiana, Western Pennsylvania and Ohio.

This agreement was renewed with minor modification and wage adjustments during the period 1899 to 1906. In the latter year the members of the joint conference were unable to agree on a new scale. As a result contracts were negotiated locally in each district. In 1908 the Illinois operators refused to be a party to the joint conference, but rejoined the group in 1910. From 1908 to 1916, inclusive, these conferences were held biennially and interstate agreements were maintained with the exception of the years 1910 and 1914, when the conference deadlocked over the scale of wages to be paid. During the interim, local contracts were arranged.

The agreement of 1916 was to have remained in force until March 31, 1918. However, the rapid and unprecedented increase in the cost of living brought on by our entrance into the war and the difficulty of maintaining an adequate working force of mine workers in the face of the higher wages that were being paid in other industries, made necessary a readjustment of the wage rates. A supplementary agreement drawn up on April 12, 1917, gave increases in rates to all classes of mine workers. In October of the same year, the parties to the agreement, in conjunction with the United States Fuel Administrator, gave new increases which were embodied in a second supplementary agreement extending the contract of 1916 as modified during the continuation of the war and not to exceed two years from April 1, 1918.

In 1919 the miners, at their biennial convention demanded, among other things, a 60 per cent increase for all day, tonnage, yardage and dead work rates; a six-hour day, five days per week and the expiration of all contracts in the bituminous field before November 1, 1919. Subsequent conferences were held by the operators and miners but no mutual understanding was reached. Government agencies intervened without success. No agreement having been reached by November 1, 1919, a general strike of all bituminous workers was called. This strike was ended by the appointment of the United States Bituminous Commission and the granting of a temporary increase of fourteen per cent to the wages of all mine workers.

The award of this Commission granted the following increases which were to be applied to the rates prevailing on October 31, 1919, i.e., the rates prior to the Garfield award of 14 per cent:

Tonnage rates, pick and machine mining. . . . .	24c per ton
Yardage, dead work, narrow work and room turning. . . . .	20 per cent
Day men. . . . .	20 per cent

These increases gave the tonnage men "an average increase over 1919 of 31 per cent while day men, whose wages were advanced disproportionately under the Washington agreement, were given an average increase of 20 per cent". (Majority report of the United States Bituminous Coal Commission, 1920, p. 38). The award was incorporated in the agreement of March 31, 1920. This agreement, at the request of the United States Coal Commission, was re-affirmed in January, 1923, and extended to March 31, 1924.

#### Factors Determining Wages in the Central Competitive Field.

The first clause of the joint declaration of principles as formulated by the interstate

convention for the Central Competitive field reads as follows:

That this movement is founded and that it is to rest upon correct business ideas, competitive equality and upon well recognized principles of justice. (*Proceedings of the Interstate Joint Convention, 1902, p. 51.*)

In accordance with the theory of 'competitive equality', wages in this area were so fixed that all the mines in a district were able to produce coal and place it on the market. Earning capacity as a factor in wage setting was given secondary consideration. How this theory works out in practice has been forcibly stated by a Southern Illinois operator at the state joint convention of 1902 and 1903:

We had banded together here so that the operators in every district might exist, notwithstanding the different conditions that prevail; and so long as we work on these lines some miners will have to accept less wages than others. So long as we work on competitive lines some operators will have to receive less compensation than they are really entitled to.... As long as we are working on the base we now have—that is, competition and regulating the earnings of the men in those lines so that one operator cannot drive another out of the market—some miners will suffer more or less and some operators will suffer more or less.

We penalize the thick veins to support the mines where they have thin coal in order that they may live and go into the market. We don't demur against that. It is a hardship that ordinarily we would consider from a commercial standpoint we ought not to fear, but we have got into this movement, and operators and miners alike have got to learn to suffer and do it patiently. I know Litchfield as well as I know our own property. We conceded a market to them in order that they might live. We don't ship in there; the operators have agreed to stay out so as to permit the management of that property to operate the mines and get an income to take care of it." (First paragraph—Joint Convention of Illinois Coal Operators and U. M. W. A., 1903, p. 51, Mr. Moorshead. Second paragraph—item, 1902, Eleventh Special Report of the Commissioner of Labor. Chapt. VI, pp. 391-394.)

The principle underlying wage setting was pointed out with equal frankness by Mr. John Mitchell in his testimony before the Commission on Industrial Relations.

As I say, it is impossible to determine the cost solely upon the earnings of men, because if we were to do that, if we were

to say that a man could earn \$4 a day at Danville he ought to earn \$4 at every other mine, because if the board fixed entirely upon wages some of the mines could not operate; the physical condition of the mine and the freight rates would exclude them from the market; so that if there be some natural condition in the mining field that makes it more expensive to operate these mines at a base point, we have to understand what the mine owners, I think, all recognize that that burden should be carried in part by the mine owner by reduced profits, and part by the miners in less wages: so that in a rough way an attempt has been made to establish our mining scales, based upon the comparative opportunities of the different mining fields and perhaps upon the opportunities of the miners in the different fields to earn their wages. (Final Report and Testimony of the Commission on Industrial Relations, 1916, Vol. I, p. 411.). . .

The rates in the industry today are therefore, the resultant of a combination of factors—the application of the theories of competitive equality and of uniform earning capacity; the bargaining strength of the unions and operators, which varied from field to field; the condition of the labour market and other economic forces . . .

Within recent years there has developed, among certain of the operators of the central competitive field a growing dissatisfaction with the interstate agreements. . .

There are several reasons advanced for this change in attitude of the operators. They assert that "mine labour as well as organized labour in other industries is demanding negotiation in unwieldy units" and point out that "adequate and proper representation for wage agreement negotiations for such large areas give a conference body of such size and diversified opinion that the original intent and purpose of collective bargaining is made impossible." (Coal Age, March 2, 1922, p. 181).

They further contend that the original conditions which resulted in the central competitive field arrangement have gradually disappeared and substantiate this contention with the statement that the active competition between Western Pennsylvania and Southern Ohio on the one hand and Illinois and Indiana on the other no longer exists...

A third factor that has had a marked influence on both the general level and upon the variations in the bituminous wage scale in certain parts of the country is the existence of large non-union fields. Taking the country as a whole, both tonnage and day rates are lower in non-union than in union

fields. If the relationship in earnings of the year 1921 is representative, the differences in rates are somewhat but not entirely offset as far as annual earnings are concerned by the greater number of days worked during the year. In 1921 the average number of starts made by tonnage men was 151 in non-union mines as compared with 135 in union mines. The average number of eight-hour days worked by day men were 200 and 185 respectively. Nevertheless the average annual earnings for both groups of workers was lower in the non-union operations, taking the country as a whole...

#### Classification of Mine Workers.

The wage-earners employed at the bituminous coal mines are usually grouped into one of two classes; those whose working places are underground in the mine proper, generally called inside men, and those whose working places are on the surface, commonly referred to as outside men. In 1921 of the 663,754 wage-earners in the industry, about 85.5 per cent were inside men and 14.5 per cent worked on the surface....

Of the 567,289 employees working inside the mines in 1921, approximately 70 per cent were mining coal . . . Three out of every ten employees were engaged in the work of transporting the coal to the surface, as maintenance of way men, or in keeping the ventilation system in operation . . .

The 96,465 outside employees are scattered among a considerable number of occupations. The largest single group are the various engineers, who constituted about ten and a half per cent of the outside workers. The blacksmiths and their assistants are second in importance and represent 8.8 per cent. The firemen comprise eight per cent of the total outside force and the carpenters five and one half per cent.

The employees in the bituminous industry are further classified into tonnage and day men. By tonnage men are meant those workers who actually mine the coal, that is, who undercut it with a pick or machine, shoot it down and load it into the mine cars. As a rule these men are piece workers. In this group are included the pick miners, the machine cutters and their helpers and the loaders. In general, the unit of payment is a ton of 2,000 pounds. In many of the mines in Pennsylvania and Maryland a 2,240 pound ton is used. Many of the non-union mines pay on a car basis. In some instances, espe-

cially in the case of machine cutters and their helpers a per day rate is paid.

The remaining wage earners are generally referred to as day men. Most of these workers are paid on a daily basis. In some instances hourly or monthly rates are paid. Out of 663,754 men and boys employed in or around bituminous mines in 1921, about 60 per cent were tonnage men. It is of interest to note that in the anthracite industry the percentage of men actually mining coal is only about 44 per cent. This difference is explained in part by the fact that anthracite coal mining, much more so than bituminous, is a manufacturing as well as an extractive industry and also because of the more complex system of mining necessitated by the pitching seams, the depth of the mines, the presence of water and the general geological structure of the coal beds. The anthracite product commonly contains larger quantities of slate, rock and other impurities. As a result the coal is sent through an elaborate mechanical process, thus requiring a larger percentage of day men . . .

The collective contract made jointly by the representatives of the two sides for the entire competitive field fixes only the rates for the basing points,—that is the rate is fixed by the Hocking Valley district in Ohio, for Indiana, for the thin vein mines of western Pennsylvania and for the Danville district of Illinois. The representatives of the other districts then hold separate meetings and agree upon rates fixing differentials above or below the rates agreed upon for the basing points. Thus the basic rate for Illinois fixed for the Danville district on April 1, 1912, was 61 cents. Three other districts,—the Fifth, Ninth, and Chicago and Alton, paid the same rate as Danville. A number of other districts were given a differential advantage of a rate 4 cents per ton lower than the Danville rate, while the Fulton and Peoria districts were placed at 68 cents; the third vein of the Wilmington field was given a 95 cent rate, while one section of the First District was given a rate of \$1.27 per ton, or more than twice the rate of the Danville district.

The report sets forth the various kinds of work carried on by the tonnage men and the wide differences that are found in the coal seams of different mines, rendering meaningless a comparison of tonnage rates alone.

## ANNUAL REPORT OF THE ONTARIO DEPARTMENT OF LABOUR

---

**T**HE third annual report of the Department of Labour of the Province of Ontario gives an account of the work of the Department and its various branches during the year 1922. (The similar report for 1921 was reviewed in the LABOUR GAZETTE for February of the present year.) The report covers the operations of the boiler inspection, factory inspection, and stationary and hoisting engineers branches, the Ontario offices of the Employment Service of Canada, the administration of the Employment Agencies Act, 1917, the Provincial Advisory Committee on Unemployment and other agencies for the relief of unemployment, and the Provincial Employment Service Council. A gradual improvement in labour conditions is noted during the year under review, especially in the metal trades, including foundries and machine shops, textile and other sections of the manufacturing group, as well as the logging, mining and building industries. The marked increase recorded in employment in the building industry was partly due to the extensive highway improvement in progress during the year.

### Employment Service

The records for the year indicate that the Ontario offices of the Employment Service of Canada are now filling a larger place than formerly in the industrial life of the province. "Although the early months of the year found employment more scarce than it had been for a great many years in Ontario, over 100,000 men and women were placed in positions of assumed permanency, while casual work was provided for over 40,000 persons. This represents a total increase of approximately 35,000 placements over the previous year's showing, and is largely an indication of growing efficiency in the Service, together with

evidence of the manner in which municipalities who found it necessary to provide relief work co-operated with the local public employment offices in assigning men to such employment". (The reports of the Employment Offices of the various provinces are summarized periodically in the LABOUR GAZETTE).

New duties have recently devolved upon the Employment Service in connection with immigration, the Service being directly concerned both in measures to prevent the entry into Canada of men or women to take positions for which qualified help is already available in the province, and also in the work of securing from abroad and placing in the province workers of unusual qualifications. The Federal Department of Immigration and Colonization, before permitting a worker, other than agricultural or domestic, to enter Canada from other countries, requires from the Director of the Employment Service a certificate that there is a vacant position which the immigrant could fill, and for which there is no worker available in Canada. The transfer of British workers is, as a rule, effected through the co-operation of the national employment exchanges. All offices of the Employment Service of Canada now receive a bulletin from the British Service in which lists are given of specially qualified workers willing to go to Canada. These lists, it is stated, are particularly valuable to employers in the textile and engineering industries. The Employment Service, moreover, co-operated with the municipalities in the work of relieving those for whom they could not secure work, furnishing them with certificates that work was not available for them. The unemployed persons presented these cards at the municipal relief office and obtained relief. The report contains a full account of the combined efforts of the Dominion, Provin-

cial and Municipal authorities for the relief of distress through unemployment. Over a quarter of a million dollars was disbursed by the Province during the winter months of 1921-1922, the total number of persons benefiting being 116,631.

#### Private Employment Agencies

Private employment agencies are permitted to operate in Ontario, as in Quebec, under license and supervision. Thirteen agencies were active during last year, placing 32,286 workers during the year. About 77 per cent of these placements were construction men, labourers and bushmen sent out in gangs; 17 per cent were domestics, charwomen, camp and hotel help; 4 per cent were carpenters, mechanics, teamsters and farm help, and 2 per cent were nurses.

#### Stationary and Hoisting Engineers

The number of certificates issued to Stationary Engineers during the fiscal year was 11,486; and to hoisting and portable engineers 2,426. The number of candidates examined was 1,968. No certificates were revoked, cancelled or suspended. Three hundred and ninety power plants were registered during the year.

#### Factory Inspection

A greater volume of work was accomplished by this branch during 1922 than in any former year. Inspections carried out numbered 18,528, as compared with 14,349 in 1921. The employees in the industries, mercantile establishments and office buildings inspected numbered 235,486, of which number 163,888 were males over 16; 68,620 were females over 18; 792 males from 14 to 16 years; 2,186 females from 14 to 18; and 29 children under 14. The following

table shows the percentages of employees, male and female, working specified hours in the week:

	Percentage of employees	
	Male	Female
Working 45 hours per week....	51.78	71.88
" 50 " " " ....	21.48	16.98
" 54 " " " ....	12.80	7.57
" 58 " " " ....	1.18	.31
" 60 " " " ....	12.75	3.25

Seven hundred and forty-six permits were issued under the section of the Factory, Shop and Office Building Act which controls the practice of contracting out for the manufacture of garments, etc. The number of complaints received during the year was 169; 3,416 accidents were reported in the same period, 45 of these being fatal, these figures comparing with 4,013 and 46 respectively in 1921. Particulars of each fatality are given in the report.

#### Boiler Inspection

The Steam Boiler branch registered 333 designs, and inspected 354 new and 846 second hand boilers. Early in the year an order in Council was passed adopting the Canadian Interprovincial Regulations for the construction and inspection of boilers, tanks and their appurtenances. These regulations came into force at the beginning of the current year. (LABOUR GAZETTE, July, 1922, page 705, October, 1922, page 1040).

The report contains tables compiled from figures published in the LABOUR GAZETTE showing the number of industrial disputes, fatal accidents, immigration, and the average cost of staple foods, also a series of tables of wages and hours of labour in various trades in Ontario in 1921 and 1922, published by the Department of Labour of Canada.

## MOTHERS' ALLOWANCES IN CANADA

---

### Summary of the Provisions of Various Provincial Acts.

**L**AWS providing for the payment of allowances to indigent mothers with young children deprived of a father's support are now in force in five provinces of Canada, namely, Manitoba, Saskatchewan, Alberta, British Columbia and Ontario. Manitoba, in 1916, enacted the first Mothers' Allowances Act in Canada, and the example was followed by Saskatchewan in 1917 (the Saskatchewan act was remodelled in 1922); by Alberta in 1919, and by British Columbia and Ontario in 1920. Amendments tending generally towards greater uniformity, and some providing for reciprocity between provinces having mothers' allowance systems, were subsequently made to certain of the acts as originally passed. In Nova Scotia a Royal Commission, appointed by the provincial government in 1919 under the authority of an act of the legislature in the same year, recommended that mothers' allowances should be provided, but no legislative action has since been taken to carry out this recommendation.

The primary purpose of mothers' allowance legislation is the promotion of child welfare, not the relief of distress. The assistance afforded to the mother and her family is considered as an act of justice rather than charity. Official statements issued from time to time refer to the honourable service rendered to the State by the assisted mothers. The Manitoba commissioners intimate that they "do not wish applicants to be considered as applying for charity; a mother when in receipt of an allowance is receiving recognition for her services to the province in bringing up her children". Similarly the Ontario Commission "do not wish applicants to be considered as applying for charity; rather,

the mother, when in receipt of an allowance, is to be regarded as an employee of the Ontario Government, receiving remuneration for services rendered in the proper care of her children". Similar statements have been made by administrators in other provinces.

Mothers' allowance legislation presumes that the services rendered to the state by mothers cannot be replaced by institutions or any other agency. Its aim is to keep the home life intact, and in the words of the Nova Scotia Commission "secure for the children the supreme privilege of a mother's nurture and care". Similarly the report on an inquiry conducted by the Ontario Department of Labour in 1919, which resulted in the passing of the act of that province, affirm that "the family remains the unit of society, and nothing compensates the child for the lack of its mother's care. Mothers' allowances keep children at home".

But if children are to be brought up at home the mother must have sufficient means and leisure to give to the care of her family. Wanting sufficient means, mothers have to neglect their children's welfare and meet the more urgent problem of finding a livelihood. Often they receive boarders into a house already crowded, or take positions outside the home, leaving their children without proper oversight. Many social evils are attributed, at least in part, to involuntary neglect of their children by indigent mothers, and for these evils it is hoped that a partial remedy has been provided by mothers' allowances. Home neglect has been traced in the rate of child mortality and in the physical defects of children, in their irregular attendance at school, and in juvenile de-

linquency. Mothers' allowances, therefore, have a definite social purpose apart from the relief of individual cases of distress. The Chairman of the Ontario Commission says: "I believe a large proportion of the money we spend in this way (mothers' allowance) will ultimately be saved in a better type of citizen, in a higher productive capacity on the part of our citizens, and in saving our boys from the penitentiary"; while the Nova Scotia Commission goes so far as to assert that "a properly administered scheme of widowed mothers' allowances would have certain economic and social results in actually presenting the public with a concrete showing of the cost of preventable disease and death".

The main features of the various provincial acts are shown in the following paragraphs.

#### Beneficiaries

The provincial acts differ considerably in regard to the classes benefiting, the variations being in respect to such points as the size of the assisted family and the age of the children, and the inclusion of the families of prisoners or those in which the husband is a confirmed invalid. In some provinces the administrators are given wide discretion in apportioning allowances, while in others the various classes of beneficiaries are more strictly defined.

In Manitoba applications are at the present time considered only from widows with dependent children (the number and age of the children being left open), and from women whose husbands are confined as insane. The act, however, includes also the families of prisoners and those in which the husband is physically disabled. In all cases the dependent or neglected condition of the children must be shown to result either wholly or in part from the mother's poverty, and it must also be evident that the best interests of the children would be furthered by their mother's direct care.

The Ontario act lays down more definite limits in regard to the classes of women to be assisted, but the Board is not strictly bound by this limitation, having authority to recommend the payment of allowances to deserving cases which do not comply with the general conditions. The Board, however, on its own authority, may award an allowance to a mother who has resident with her two or more children under fourteen years of age (this age limit was raised to sixteen years on the coming into effect of the Adolescent School Attendance Act). Such a woman may receive an allowance whether she is a widow, or the wife of an insane or permanently disabled husband. Considerable extensions were made by amendments in 1921 in the classes of women assisted. Deserted wives, whose husbands have not been heard of for five years, are now treated as widows for the purposes of the act, as also are women with only one child under fourteen but who have also the care of an invalid husband or a child over the regular age limit. Moreover, foster mothers, whether relatives or not, are now assisted in the discharge of their responsibilities. Besides these qualifications the Ontario act requires that the woman must have resided in Canada for three years and in Ontario for two years, and that she continues to reside in the province while in receipt of an allowance. British citizenship is also required of applicants.

In Alberta, applications are considered from any woman who is a widow, and who has in her custody a child or children under the age of fifteen, in the case of boys, and under sixteen, in the case of girls, and who is otherwise unable to take proper care of her children. The wife of an insane person is admitted to the same benefits as a widow.

The Saskatchewan act of 1922 contains a provision similar to that of the Ontario act, as amended, including not only widows and the wives of insane and

permanently incapacitated husbands but also foster mothers, whether or not they are relatives of the children under their care. A woman whose husband is an inmate of a gaol or penitentiary is also eligible for an allowance. The age limit of the children of beneficiaries is sixteen years for both sexes, women with one or more children of this age being eligible.

In British Columbia, the benefits of the act are conferred upon any indigent mother of one or more children who is a widow or the wife of an inmate of a penitentiary or hospital for the insane, or who is permanently disabled, domicile within the province on the part of the husband at the time of his death, incarceration, or disability being also required. Deserted wives are also eligible, subject to the same requirement as to the husband's former domicile, and any other persons who, in the Board's opinion, deserve assistance.

The Nova Scotia Commission on Mothers' Allowances recommends that mothers' allowances be granted to widows with two or more children. The Commission held, as a general principle, that a mother with one child should be able to bring it up properly without public aid, but, considering exceptional cases, they proposed to include this class also after provisions have been made for larger families. The Commission also recommended that allowances should be made to the families in which the father suffered from incurable disease and is totally disabled, pointing out, however, that such provision would be open to serious abuse; and for families in which the father is insane. In regard to the wives of prisoners, the Commission included this class with some hesitation, preferring some scheme of prison labour whereby a prisoner's earnings could be applied to the support of his family. Other doubtful classes are deserted families and families of unmarried mothers; the temporary inclusion of the former class is recommended, until defaulting husbands are compelled

by law to carry out their natural obligations, while unmarried mothers should not, in the opinion of the Commission, be assisted until parental responsibility in such cases has been established by law.

#### Amount of Allowances

The total amount of the allowances is generally limited by the amount annually voted by each legislature for this purpose, while in some provinces a definite weekly or monthly limit is fixed by statute or regulation.

In Alberta, the legislature appropriates each year a definite sum from which allowances are paid, the amount in each case being in accordance with the recommendation made to the Attorney-General by the Superintendent of Neglected and Dependent Children.

The British Columbia act limits allowances to \$42.50 a month to a mother and one child under sixteen years of age, with a additional monthly allowance of \$7.50 for each additional child under that age.

Allowances in Ontario are paid out of an annual appropriation by the legislature. There is no fixed sum or schedule according to which the payment of allowance must be made, but the Commission fixes the maximum and minimum amounts in accordance with a cost-of-living budget. The amounts vary according to locality, ranging from \$40 a month for a widow with two children living in a city to \$30 for a family of the same size in the country, of the same size in the country, the larger allowances being made for larger families.

In Manitoba and Saskatchewan the total amount of allowances in each year is limited by annual appropriations by the provincial legislatures. In the former province the schedule drawn up by the Board allows the mother \$9.50 per month for food and \$5.50 for clothing; while the monthly allowance for children increases from \$3.50 for food for

a child between the ages of one and three years to \$4.50 for a child of from four to six years; \$5.50 for one from seven to ten years; and \$7 from eleven to fourteen years. For the same periods the monthly allowance for clothing is fixed at \$1.50, \$2.50, \$3 and \$4, respectively.

#### Administration

Centralized provincial control in the administration of mothers' allowances is provided in all the Canadian acts. Two methods, however, are followed, control being exercised either by the Government through an existing official, or by a special board or commission. In Alberta and Saskatchewan administration is by the government through the Superintendent of Neglected and Dependent Children. The same plan was followed also in British Columbia until 1921, when administration of mothers' allowances was placed in charge of the Workmen's Compensation Board, in addition to the proper duties of that Board, the members receiving additional salary up to \$1,000 a year for this service. In Manitoba and Ontario the acts are administered by Mothers' Allowances Commissions; in the former province the Commission is composed of five members, men or women, or both, who have authority to draw up rules and regulations, receiving no remuneration for this service. The Ontario Commission is also composed of five members serving without remuneration, the normal period of service being five years. The expenses of the Commission are paid on a *per diem* basis at a rate fixed by the Lieutenant-Governor-in-Council.

#### Local Responsibility

The local authorities or municipalities in which the beneficiaries reside share the financial burden of mothers' allowances in most provinces. Under the Manitoba act the Municipal Commissioner may be authorized by Order-in-Council to levy upon each municipality concerned the whole or any part of the amount expended by the province in

allowances. In Alberta the Attorney-General may require from municipal treasurers the repayment of one-half of the amount expended by the province on allowances within their respective municipalities. In Ontario also the local authorities are required to contribute one-half the amount paid in allowances within their boundaries, provided the beneficiary and her family have resided within the municipality for at least one year; but if the beneficiary resides in a provisional judicial district, the whole expense is borne by the province. The provincial authorities which administer the various acts are assisted by local organizations for which special rules are laid down either by statute or by regulation. The Ontario act authorizes the Commission of that province to appoint local boards for counties, cities or separated towns or districts, or for any defined territory in the province, for the purpose of inquiring into the facts of each case. The Commission may also appoint visitors or other local officers. The British Columbia act provides that the Lieutenant-Governor-in-Council may appoint local advisory boards to report on applications, to visit families receiving assistance, and otherwise assist administration. The Alberta act provides that municipal councils appoint one or more inspectors whose remuneration shall be fixed and paid by them, to receive applications and generally further the purposes of the act. The regulations in Manitoba require municipalities to appoint committees of not less than three persons, of whom one must be a woman, but preferably of five persons, two of them women, to receive applications, and forward their records in regard to all cases to the provincial government, and to supervise the families of beneficiaries. No member of a municipal committee receives any remuneration from the province.

#### Reciprocal Arrangements

Provision is now made in the acts of Ontario and Saskatchewan for establishing reciprocity with other provinces

in regard to mothers' allowances. The Ontario act, as amended in 1921, enables the Commission of that province to enter into arrangements with other provinces in Canada in regard to payments to persons who change their place of residence. It is provided, however, that "no such arrangement shall be entered into, nor shall any such payment be made, except when the province concerned has passed legislation enabling reciprocal action to be taken with regard to beneficiaries under this act who

may move into such province". The only province which has at the present time met this condition is Saskatchewan. The redrafted act of 1922 provides that, when legislation has been passed in another province for reciprocal action with regard to beneficiaries, allowances may be paid to persons moving into Saskatchewan from such a province, provided the combined periods of residence in the two provinces equals the period of residential qualification required for beneficiaries in Saskatchewan.

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

Reports of the Dominion Bureau of Statistics on (a) Telephone Statistics, 1922; (b) Fur Farms of Canada, 1922.

THE Dominion Bureau of Statistics recently issued reports giving telephone statistics and particulars regarding the fur farms in Canada for the calendar year 1922. Previous reports in this series relating to various industries were outlined in the September issued of the LABOUR GAZETTE and in previous issues.

### Telephone Statistics

The report on telephone statistics states that Canada ranks second among the countries of the world in the proportion of telephones to population. There were 10.53 telephones per 100 population in Canada in 1922 of which 15.19 per 100 were in British Columbia, 13.59 in Ontario, 12.24 in Saskatchewan, 10.89 in Alberta, 10.78 in Manitoba, 6.96 in New Brunswick, 6.87 in Nova Scotia, 6.58 in Quebec, and 5.80 in Prince Edward Island. The number of telephone companies in Canada in 1922 was 2,387, an increase of 22 over the previous year, the increases being mainly in Alberta, Quebec and New Brunswick which showed additions of 10, 5 and 3 companies respectively. The number of telephones in Canada in 1922 was 944,029 as compared with 902,090 in 1921, showing an increase of 212

per cent in 11 years. The total capital invested in 1922 was \$143,802,023 as compared with \$132,537,771 in the previous year. Compared with 1921 the revenue increased 7 per cent and with a reduction in operating expenses of 4 per cent., net revenue increased \$2,686,090, amounting to \$9,592,968 in 1922. The total salaries and wages were reduced from \$19,000,422 in 1921 to \$17,305,759 in 1922 or 11 per cent, and the number of employees showed a reduction from 19,943 in 1921 to 19,321 in 1922, or 3 per cent.

The following table gives the number of telephone companies as well as the number of employees by provinces during the year 1922:

	No. of telephone companies	No. of employees
Prince Edward Island.....	46	99
Nova Scotia.....	212	775
New Brunswick.....	36	622
Quebec.....	165	4,479
Ontario.....	609	8,491
Manitoba.....	38	1,314
Saskatchewan.....	1,216	1,055
Alberta.....	53	807
British Columbia.....	11	1,673
Yukon.....	1	6
Totals.....	2,387	19,321

The following table shows the number of large telephone systems in the various provinces, the capital invest-

ment, and the number of persons employed and salaries and wages paid:

	No. of systems	Total capital	No. of employees	Salaries and wages
		\$		\$
Prince Edward Island.....	1	611,400	96	58,206
Nova Scotia.....	1	5,850,000	731	327,538
New Brunswick.....	1	2,605,960	586	423,456
Quebec.....	*12	50,225,477	11,951	10,553,011
Ontario.....	19	925,019	184	170,606
Manitoba.....	1	18,094,003	1,271	1,652,200
Saskatchewan.....	1	10,185,387	609	688,525
Alberta.....	1	23,186,963	728	989,975
British Columbia.....	6	7,344,313	1,654	303,878
Yukon territory.....	1	65,000	6	13,280
Totals.....	44	119,093,522	17,816	16,478,675

\*Including the Bell Telephone Company of Canada, with headquarters at Montreal.

#### Fur Farms of Canada, 1922

The report on the fur farms of Canada for 1922 shows that there were in operation 1,026 fur farms, comprising 977 fox farms and 49 farms raising miscellaneous fur-bearing animals including 17 raccoon, 13 mink, 5 muskrat, 5 beaver, 4 karakul sheep, 3 skunk, 1 marten and 1 fisher farms. Of these farms 718 were operated by individuals, 158 by partnership and 150 by joint stock companies. The fox farms showed an increase in number over 1921 of 202, and the miscellaneous fur-bearing animal farms an increase of 12. The increase in the number of fur farms was general throughout the Dominion, except in the Yukon Territory where the number remained the same. In 1921, 532 farms were operated by individuals, 132 by partnerships, and 148 by joint stock companies.

The total value of the property of the fur farms in 1922 was \$7,790,104, comprising \$1,925,951, the value of the lands and buildings, and \$5,864,153, the value of the fur-bearing animals. A slight decrease from the previous year is shown in the total value of the fur-bearing animals, due to the lower average values for silver foxes.

The total number of all fur-bearing animals on the farms on December 31, 1922, was 30,782, an increase over the previous year of 7,677 or 33 per cent. The number of silver foxes on the farms on December 31, 1922, showed an increase of 4,364 or 24 per cent over the number shown for 1921, but the total value showed a decrease of \$126,338, or 2 per cent. The general average compared with \$322 in 1921. The following table gives by provinces some of the principal statistics of the fox farms for 1922:

	No. of fox farms	Value of property	No. of employees	Wages	Animals born during year	Animals which died during year
Prince Edward Island.....	434	3,692,509	273	167,473	9,979	1,787
Nova Scotia.....	107	474,047	37	21,530	1,589	461
New Brunswick.....	86	839,705	57	42,468	2,643	349
Quebec .....	146	773,324	40	24,294	1,515	341
Ontario .....	120	765,115	43	24,402	1,556	383
Manitoba .....	19	654,510	20	17,991	480	36
Saskatchewan .....	4	91,825	4	3,529	82	25
Alberta .....	24	133,925	5	3,740	299	95
British Columbia.....	21	122,850	7	3,313	123	11
Yukon Territory.....	16	102,060	8	4,625	226	45
Canada.....	977	7,649,877	494	313,365	18,492	3,533

## THE SAFETY MOVEMENT IN CANADA

THE industrial safety movement in recent years has been receiving considerable attention in Canada. Regulations relating to the safety and health of the workers have been issued under the authority of the various provincial factory acts, the coal mines regulation acts, and the workmen's compensation acts. A number of accident prevention associations owe their origin to the workmen's compensation acts, among which may be mentioned the industrial accident prevention associations of Ontario and Nova Scotia. Several industries and individual firms maintain safety associations and committees, many firms being members of the National Safety Council, Chicago U. S. A.\* and of the Canadian National Safety League and sections thereof. Training in first aid is carried on under the auspices of the Workmen's Compensation Boards and under the direction of the St. John Ambulance Association. Summaries of the progress of the safety movement have been given from time to time in the LABOUR GAZETTE among which may be mentioned articles appearing in the issues of November, 1918, on page 1026; February, 1920, page 109; August, 1920,

page 1016; May, 1921, page 691; and other issues.

### Quebec Safety League Formed

Among recent developments in safety work in Canada is the formation of the Quebec Safety League as a section of the Canadian National Safety League which was incorporated under dominion charter in 1918, an account of which is given in the LABOUR GAZETTE for February, 1919, on page 206. The National League previously included in its membership the Ontario and Manitoba Safety Leagues and the Shawinigan Falls Safety League of Quebec. At the last session of the Dominion Parliament a grant of \$25,000 was made to the National League for the further organization of leagues in the various provinces. The Quebec league has been formed along lines similar to the Ontario league, with Mr. Zepherin Herbert as president. Its headquarters are located at Montreal and its objects as set forth in the constitution are as follows:

To protect and safeguard the public, especially children, from the dangers of automobiles, railroads, street railways, and all forms of vehicular traffic on the public highways of this province.

To educate the public through schools, churches, literature and all channels of pub-

\* See report of convention proceedings on page 1272 of this issue.

licity upon all matters pertinent to public safety.

To minimize the injuring and killing of persons employed in stores, factories, workshops, and all departments of industrial and mercantile activity, by instilling into the minds of employers and employees the full meaning of "safety always".

To co-operate in the prevention of destruction of lives and property by fire, to assist in the enactment and enforcement of all possible legislation for the improvement of public safety, and to encourage and assist the formation of Safety Leagues throughout the province.

At the organization meeting an advisory committee composed of the mayors of fifteen cities and towns of Quebec was agreed to, and an executive committee of twenty-seven representative men was elected with power to add to its numbers.

#### **Steel Company holds "Safety First" Week**

Recently The Steel Company of Canada, an industry represented on the executive of the Ontario Safety League, which was the first league formed in Canada, held a "safety first week" at their Montreal plant during which time no accidents were recorded. Prizes were offered in each of the plants for the best slogan and the best suggestion for accident prevention. About 750 employees were present at the opening meeting of the campaign when addresses were delivered by officials of the company, Mr. Louis Guyon, deputy minister of labour for the province, Mr. A. Robert, chief factory inspector, and Mr. R. B. Morley, general manager of the Ontario Industrial Accident Prevention Association. Mr. Morley said that the idea of the movement was "Be careful to-day, to-morrow may be too late". He proposed the following preventive rules for the steel industry:

1. New men should be carefully instructed in their work.

2. Handling material is the most common cause of accidents, and calls for more care.

3. Blood poisoning and infection can be prevented by prompt first aid.

4. Eye injuries can be reduced by the use of proper safety goggles.

5. The tripping hazard can be cut down by keeping floors and passageways clear of loose materials.

#### **Medal for First Aid Work in Canada**

The Canadian Branch of the St. John Ambulance Association will award an engraved gold medal for the most outstanding first-aid service rendered throughout Canada by an individual in any one year, and a silver medal for the next similar act. The winners must be members of the Association. Dr. C. A. Hodgett, director general of the Canadian branch of the Association, made the foregoing announcement on October 17, in presenting certificates and medallions for efficient first-aid work to the station employees of the Canadian Pacific Railway Company at Ottawa. He pointed out the importance of first-aid training for railway employees.

#### **Employers' Accident Association**

An employers' association is being organized in New Brunswick for the purpose of uniting the employers of the Province in any future action they may take in connection with Workmen's Compensation. The Act provides for the official recognition of such an association, subject to the approval of the Workmen's Compensation Board. An approved association has authority to make rules for the prevention of accidents in the industry or industries represented by it, and to appoint inspectors, the expenses being met by the Board from the account of the class or subclass of the accident fund represented by the Association.

## ANNUAL SAFETY CONGRESS OF THE NATIONAL SAFETY COUNCIL

---

**A**BOUT 3,500 men and women representing the various states of the United States, five provinces of Canada and the major industries in North America attended the twelfth annual safety congress of the National Safety Council held in Buffalo, New York, on October 1 to 5. A special feature of the congress was the dramatization of the safety movement in a play entitled "Adventure: A Pageant-Drama of Life and Chance", presented by 70 students of the department of drama of Carnegie Institute of Technology.

At the opening session President Dow announced an invitation from the International Labour Office to send a representative from the Council to address representatives of employers, employees and governments of the 55 nations in the League of Nations at a conference called for October 22-29. Members of the Council voted unanimously to accept the invitation and Mr. William H. Cameron, managing director of the Council was appointed to go to Geneva, Switzerland, as the representative. Subsequent to the convention Mr. Cameron left for Geneva, taking with him a complete exhibit of materials used in industrial and public safety work in America. In his address before the conference he stated that:

The safety problem is a world problem. Its solution is of vital importance in our international industrial life.... The quickening interest of employers, of governments and of this great body (the League of Nations) devoted to the solution of world problems, is a most encouraging sign. With the co-operation of these forces, great progress in accident prevention is possible. I firmly believe that the time is not far distant when accidental death and serious injury in industry will be the exception. Earnest effort in reducing the casualties of peace is an expression of the highest type of patriotism to one's country and of service to humanity as a whole. Of much significance to us in America has been the inability of any gov-

ernment to arouse the enthusiastic interest of the employer in accident prevention by a blind method of labour law enforcement, the use of the "policeman's club". We have found that when the governmental authorities express a sympathetic interest in the complicated task of the employer and his safety problem; invite him to participate in the making of the safety laws through committees; encourage him to eliminate the accident hazards by showing him how to do so, and advocate and assist in the introduction of safety organization, then—and only then — has respect for the law resulted and with it a more ready spirit of conformity. The American method of solving the accident problem is a democratic one. The individual industry determines its own methods. The safety organization and methods are likely to be evolved through conviction that the principle is right and not because the task or the requirement is imposed by the state. If there is a distinctive note in the American method of minimizing accidents, it is the manifestation of a real industrial democracy; the method and result depending upon the co-operation of employer and employee. In many instances this has led to a better understanding of industrial problem and has shown the possibilities of effective co-operation.

Dr. Royal Meeker, Commissioner of the Pennsylvania Department of Labour and Industry, in addressing the congress stated that the high accident rate in the United States was "due partly to the emphasis placed on highest speed in production, partly to improper layout and construction of plants, partly to the heterogeneous mixture of nationalities and races in our industries, but most of all to a spirit of recklessness on the part of masters and men alike. We Americans are, however, by reason of our environments chance-takers, and the workers in our industries manifest this gambling spirit in their work and in their play."

Dr. Ford, president of the American Association of Industrial Physicians and Surgeons stated that three-quarters of the poverty in the North American con-

tinent is traceable to physical and mental incapacity and that on the basis of time lost every year by working persons, each person in the United States and Canada loses seven days annually through illness, which means a total of 770,770,000 days every twelve months. "The effective solution of our social problems", he said, "rests upon the foundation of the prevention of diseases. Insufficient revenues means undernutrition, improper housing means lowered resistance, increased susceptibility to disease and often times physically subnormal children". The Hon. Forbes Godfrey, M.D., Minister of Public Works and Labour in the Ontario Government endorsed the principle of "preventive medicine" claiming that it was, after all, the greatest in the profession which he represents. Mr. George B. Andrews, manager of transportation of the Los Angeles Railway spoke in favour of the award system as a means of preventing accidents.

The Honourable G. S. Henry, Ontario's Minister of Public Health and Highways discussed the subject of highway safety, and Mr. L. A. DeBlois, a vice-president of the Council spoke on the community safety problems claiming that figures for 1920 developed by the statistical committee of the Public Safety Section of the Council show that among a large group of insured industrial wage-earners industrial hazards were responsible for only one-quarter

of the total accidental deaths, while the remaining three quarters were caused by public and home accidents.

The following resolution was adopted by the Congress outlining a programme which all communities are asked to follow during the coming year:

(1) The adoption and strict enforcement of uniform, practicable laws and ordinances for the safeguarding of traffic and the protection of the multitude of law abiding drivers and pedestrians against the criminal recklessness of the few.

(2) The more careful study of our street and highway systems, both existing and projected, by competent engineering and traffic experts from the standpoints of safe and efficient traffic movement.

(3) The safeguarding of all dangerous machinery and places in industry and elsewhere according to standard methods of proved value.

(4) The development of industrial equipment and processes along lines of inherent safety for the double purpose of eliminating accident hazards and increasing production efficiency.

(5) The education of all workmen and their supervisors in safe methods and habits of work.

(6) The training in safety thinking of all school children, as well as students in colleges and universities, both for their own protection and as an object lesson in good citizenship.

(7) The mobilization of all community forces through state and city safety councils for securing these ends through the overwhelming force of enlightened public opinion.

## CONVICTION OF LABOUR OFFICIAL FOR SEDITION LIBEL

ON July 4, a circular letter signed by Mr. J. B. McLachlan, at that time Secretary of District 26, United Mine Workers of America, was addressed to officers and members of local unions of District 26. The letter contained charges against the provincial police of Nova Scotia with reference to their conduct at Sydney during the strike of

steel workers. The text of the letter was as follows:

"To officers and members of local unions. Brothers:

"This office has been informed that all the Waterford, Sydney Mines and Glace Bay sub-districts are out on strike this morning as a protest against the importation of provincial police and federal troops into Syd-

ney to intimidate the steel workers into continuing work at 32 cents per hour.

"On Sunday night last these provincial police, in the most brutal manner, rode down the people at Whitney Pier, who were on the street, most of whom were coming from Church. Neither age, sex nor physical disabilities were proof against these brutes. One old woman over 70 years of age was beaten into insensibility and may die. A boy nine years old was trampled under the horses' feet and had his breast bone crushed in. One woman beaten over the head with a police club, gave premature birth to a child. The child is dead and the woman's life despaired of. Men and women were beaten up inside their own homes.

"Against these brutes the miners are on strike. The government of Nova Scotia is the guilty and responsible party for this crime. No miner or mine worker can remain at work while this government turns Sydney into a jungle. To do so is to sink your manhood and allow Armstrong and his miserable bunch of grafting politicians to trample your last shred of freedom on the sand. Call a meeting of your local at once and decide to spread the fight against Armstrong to every mine in Nova Scotia. Act at once — tomorrow may be too late.

Faternally yours,

J. B. McLACHLAN,  
District 26, U.M.W. of A."

In view of the allegations contained in this letter warrants were issued un-

der the instructions of the Attorney General of Nova Scotia for the arrest of Messrs. Dan Livingstone, president of District 26, United Mine Workers of America, and J. B. McLachlan. The charge was that of unlawfully publishing a false tale whereby injury of mischief was likely to be occasioned to a public interest, namely, the Government and provincial police of Nova Scotia, contrary to Section 136 of the Criminal Code.

The trial of J. B. McLachlan took place at Halifax in October in the Supreme Court of the province, before a jury, Mr. Justice Mellish presiding. Evidence was submitted by witnesses for the Crown denying the truth of the statements in the letter. No witnesses were produced for the defence. On October 18, the jury brought in a verdict of "guilty" and on October 31, the prisoner was sentenced to two years in the penitentiary. An appeal was taken against this decision, and the case will come before the full bench of the Supreme Court.

The trial of Dan Livingstone was postponed.

## JUDGMENT AGAINST WORKMAN FOR SPREADING FALSE NEWS

LAST February, a labour man, Bernard Markson, residing in Peterborough, Ontario, contributed an article in the form of a letter to "The Worker" a labour publication of Toronto, in which certain charges were made against a number of employing companies of Peterborough, alleging that they were paying unfair wages, discriminating against union men, and employing child labour. It was also charged in the article that the Peterborough Chamber of Commerce existed to crush the employees. On complaint of the companies attacked, the author of the article was arrested on the charge of spreading false news con-

trary to Section 136 of the Criminal Code which says:

"Everyone is guilty of an indictable offence and liable to one year's imprisonment who wilfully and knowingly publishes any false news or tale whereby injury or mischief is likely to be occasioned to any public interest."

The trial took place at the Peterborough assizes on October 23 and 24. The defendant admitted writing the article complained of, but stated that alterations had been made in it by the editor, and that he had protested against these changes. Evidence was given by a number of witnesses on behalf of the companies attacked who

denied the accuracy of the statements made in the article and of the rates of wages quoted. On behalf of the defendant it was contended that the article did not affect any public interest as defined by the words of the section, but was merely a matter of local concern. On the other hand it was claimed by the

prosecution that the article affected the public interest inasmuch as it might tend to keep immigrants away from Peterborough.

The defendant was found guilty and was sentenced by the Court to two and one-half months' imprisonment.

---

### THE EMPLOYMENT SITUATION AT THE BEGINNING OF OCTOBER, 1923, AS REPORTED BY EMPLOYERS.

THE trend of employment as indicated in returns tabulated by the Dominion Bureau of Statistics was slightly downward at the beginning of October, largely on account of continued curtailment of operations in construction, supplementing losses due to temporary shutdowns in automobile and other iron and steel works. The decline during the period under review caused the curve of employment in the accompanying chart to take a different direction from that followed at the same time last year, when moderate improvement had been indicated. The curve, however, continued to be on a higher level than in any period of 1922 or 1921.

Reports were tabulated from 5,867 firms with a total payroll of 839,513 persons, of whom 819,186 were actually at work at the period under review as compared with 830,236 on September 1. The index number stood at 99.5 on the first of October, while in the month before, it was 100.0 and at the beginning of October, 1922, and 1921, it was 94.6 and 90.2, respectively. The most pronounced changes during the period under review occurred in construction, from which over 10,600 persons were released, nearly 68 per cent of these being let out from railway construction and maintenance. The iron and steel industries also afforded considerably less employment than at the beginning of September, partly owing to the changing of models in automobile

works. Some other branches of the manufacturing industry, notably saw mills, were less fully engaged. On the other hand, logging concerns registered considerable seasonal expansion; transportation, mining, trade and some manufacturers also showed larger payrolls than at the beginning of September.

Quebec was the only province to report increased employment; shipping and stevedoring, logging, textile and tobacco work were much more active than in the month before. Construction, sawmills, rubber, iron and steel, on the other hand, were slacker. Firms in Ontario registered the largest losses, employing over 8,000 fewer persons than in the month before. A large share of this decline occurred in automobile and other iron and steel factories, in construction, sawmills and railway transportation. Boot, shoe, fruit and vegetable canning, chocolate and confectionery works, on the other hand, were a good deal busier and logging firms recorded substantial improvement, while trade also absorbed a larger number of persons. In the Maritime provinces saw mills, cotton and rolling mills, transportation and construction showed marked curtailment. Railway construction in the prairie district reported the release of a large number of workers; building and highway construction and summer hotels were slacker, while grain elevators and railway transportation were decidedly more active owing to the movement of

grain. Coal mining, iron and steel also afforded more employment. General contractions occurred in British Columbia; the losses in logging, construction, the mining of metallic ores, fish canning and sawmilling were especially heavy, while the only improvement of any importance took place in steel shipyards. The following table of index numbers shows that conditions everywhere except in the prairie provinces were somewhat better than on October 1, 1922, and also that the situation generally was more favourable than at the beginning of October, 1921.

District	Relative weight	Oct. 1 1923	Sept. 1 1923	Oct. 1 1922	Oct. 1 1921
Maritime Provinces..	8.9	97.0	101.4	91.8	93.1
Quebec .....	28.1	104.0	100.1	92.0	89.2
Ontario .....	41.6	96.0	98.1	93.6	85.9
Prairie Provinces.....	13.0	100.7	101.1	101.9	100.0
British Columbia.....	8.4	104.2	106.6	100.1	96.4
CANADA .....	100.	99.5	100.0	94.6	90.2

Firms in Montreal and Toronto showed greater activity than at the beginning of September, while in Ottawa, Hamilton, Winnipeg and Vancouver curtailment was reported. In Montreal, where approximately 5,600 persons were added to the staffs of the 732 firms making returns, the greatest improvement occurred in shipping and stevedoring, in tobacco, textile and other manufactures. The payroll of the reporting firms aggregated 113,893 persons as compared with 108,305 on September 1. In Toronto the increase on the whole was rather slight; additions to staffs in printing, textile, telephone and wholesale trade concerns were partly offset by declines in construction, and in the manufacture of photographic apparatus and lead products. A total payroll of 98,727 persons was reported by the 807 firms making returns, who had employed 98,371 workers in the month before. Very little change was

indicated in Ottawa. Road construction, iron, steel, pulp and paper works were somewhat slacker, while moderate improvement was reported in trade and by building contractors. According to reports tabulated from 123 Ottawa employers, their payrolls, aggregating 11,079 persons, were smaller by 88 than at the beginning of September. The production of wire products in Hamilton showed a considerable falling off, and other iron and steel works were not so busy. On the other hand, fruit and vegetable canneries and trade in that city absorbed a larger number of workers. Statements were received from 198 firms employing 27,685 persons as compared with 28,040 on September 1. The decline in Winnipeg was slight; printing shops reported the only decrease of any size, while garment factories in the same city showed moderate improvement. The payroll of the 291 concerns making returns declined from 25,489 persons in the month before to 25,363 on October 1. Shipping, stevedoring and fruit and vegetable canning in Vancouver employed smaller numbers of workers, while saw mills were slightly busier than in the last report. Returns were tabulated from 219 employers, whose payrolls aggregated 22,020 persons as compared with 22,503 at the beginning of the preceding month. The following table shows the index numbers of employment as reported in these cities.

City	Relative weight	Oct. 1 1923	Sept. 1 1923	Oct. 1 1922
Montreal .....	13.9	98.7	93.6	92.3

#### The Manufacturing Industries

Considerable fluctuations were indicated within the manufacturing industry, representing in some cases sea-

sonal trends. As already mentioned, the most pronounced changes occurred in the iron and steel industry; automobile, railway car works and rolling mills registered large losses in personnel and the improvement recorded in shipyards and tool works was not sufficient to offset the declines. Saw mills, carriage factories, dairies, fish canneries, rubber, brick, electric current, non-ferrous metal, petroleum and photographic appliance factories were slacker. On the other hand, fur, boot, shoe, flour, cereal, starch, chocolate, confectionery, garment, cotton, tobacco and chemical plants reported larger payrolls than at the beginning of September. Statements were compiled from 3,874 manufacturers employing 453,715 persons on October 1 as compared with 460,964 workers in the preceding month. Contractions on a much smaller scale had been indicated at the beginning of October, 1922, when the index number stood about 5 points lower than in the period under review.

**EDIBLE ANIMAL PRODUCTS.**—Employment in this industry continued to show seasonal losses. Dairies and fish canneries recorded curtailment, while meat packing and fish smoking and curing plants were slightly more fully engaged. The largest losses were reported in British Columbia, Ontario, the Prairie and Maritime Provinces, over half of the decline occurring in the first named. An aggregate payroll of 13,642 persons was shown by the 166 firms making returns, who had employed 14,302 workers at the beginning of September. There was, therefore, a decline of 4.6 per cent. Contractions had also been recorded during the corresponding period of last year, but the situation then was somewhat more favourable than at the beginning of October, 1923.

**FUR PRODUCTS.**—An increase of 123 persons or 11.2 per cent was shown by the 25 concerns making returns in this industry; they employed 1,223 workers as compared with 1,100 on

September 1. The greater part of this increase was recorded in Ontario.

**LEATHER AND ITS PRODUCTS.**—Recovery was reported in the leather group at the beginning of October, when there were larger increases than at any other period of this year. According to returns from 199 employers, their payrolls included 17,071 persons as compared with 16,518 on the first of September. The greater part of this gain of 3.3 per cent was registered in boot and shoe factories in Ontario and Quebec. Improvement on a much smaller scale had been indicated at the same period of last year, but the index number then stood at about the same level.

**LUMBER AND ITS PRODUCTS.**—Continued curtailment of employment was recorded in saw mills early in October, and wooden vehicle works also were slacker. Furniture factories, however, reported considerable improvement. The losses comprising 4.4 per cent of the payrolls, were generally distributed, those in Ontario and the Maritime Provinces being the most substantial. Returns were tabulated from 738 manufacturers employing 58,237 persons, whereas at the beginning of September they had employed 60,891 persons. The tendency during the same period of last year had also been retrogressive; the losses, indeed, were a good deal larger than at the beginning of October, 1923, and the level of employment then was several points lower.

**PLANT PRODUCTS, EDIBLE.**—Substantial improvement was shown by the 292 firms reporting in this group. Their payrolls, aggregating 28,506 persons, were larger by 1,584 or 5.9 per cent than at the beginning of September. Flour and other cereal mills, starch, glucose, fruit and vegetable canning, chocolate and confectionery factories were more fully engaged than in the month before, but sugar refineries and biscuit works were slacker. Firms in Ontario, Quebec and the Maritime Provinces reported additions to staffs, in

the Prairie Provinces practically no change was indicated, while in British Columbia there were reductions. Expansion had been indicated also at the beginning of October, 1922, and the level of employment at these two periods was practically the same.

**PULP AND PAPER PRODUCTS.** — Varying conditions within this group resulted in a small net increase. The staffs of the 458 manufacturers making returns comprised 53,924 persons as compared with 53,903 in the preceding month. Employment in pulp and paper mills was decidedly less active, but the production of miscellaneous paper goods absorbed a larger number of persons, and printing and publishing houses also reported improvement. In Ontario and Quebec the tendency was favourable, while in the Maritime and Prairie Provinces and British Columbia contractions were registered. The firms making returns for October 1, 1922, had reported moderate expansion, but the volume of employment then was less than at the present time.

**RUBBER PRODUCTS.** — Rubber footwear factories in Quebec showed a marked decline, partly owing to the closing of one of their number. On the other hand, some recovery from earlier losses was registered in Ontario. Conditions at the beginning of October, 1922, had shown improvement, and employment then was in greater volume than at the present time. Statements for the period under review were compiled from 32 concerns employing 9,674 persons as compared with 10,161 in the previous month, a decline of 4.8 per cent.

**TEXTILE PRODUCTS.** — Revival was indicated generally in garment, cotton and other fabric works in Quebec, while a more favourable trend was also reported in the Prairie Provinces and Ontario. On the other hand, the practical closing down of large cotton works in New Brunswick caused substantial reductions in the Maritime Provinces. The payrolls of the 571

firms reporting aggregated 69,114 persons; this was 1,305 or 1.9 per cent more than at the beginning of September. Somewhat more extensive improvement had been shown at the beginning of October of last year, when the index number stood slightly higher than for the period under review.

**TOBACCO, DISTILLED AND MALT LIQUORS.** — The reopening of a large tobacco factory in Quebec, which had been temporarily closed down at the beginning of September, caused a large increase in personnel in this group. The reports show that the 98 concerns making returns had increased their staffs from 10,150 persons at the beginning of September to 11,679 on October 1, a gain of 15.1 per cent. Employment in the same period of last year had been in slightly smaller volume.

**CHEMICALS AND ALLIED PRODUCTS.** — Reports were received from 117 manufacturers of chemical products, whose staffs totalled 6,835 persons as compared with 6,712 on September 1. Small additions in several divisions coming under this industry accounted for the increase, which was confined largely to Ontario.

**CLAY, GLASS AND STONE PRODUCTS.** — For the first time since the end of February, the trend of employment in this industry was downward. This seasonal movement repeats that experienced at the same period of last year when the level of employment was a good deal lower than at the present time. Statements tabulated from 122 concerns showed that they employed 10,047 persons at the beginning of October as compared with 10,332 on September 1. The greater part of this decline of 2.8 per cent was recorded in the manufacture of brick and clay products, although a downward tendency was also indicated in glass and stone works. The bulk of the decline occurred in Ontario and the Prairie Provinces.

**ELECTRIC CURRENT.** — The firms making returns in this group, 87 in num-

ber, reported the release of 289 persons from their staffs, a decline of 2.5 per cent. Their payrolls include 11,353 persons. The greater part of the decline occurred in Quebec although contractions were also registered in Ontario. Very little change in the situation had been shown during the corresponding period of last year, and the situation then was very similar to that indicated at the present time.

**IRON AND STEEL PRODUCTS.** — The volume of employment afforded in this industry was considerably smaller than at the beginning of September, 7,365 persons having been released by the 639 firms reporting. Their payrolls comprised 125,213 persons as compared with 132,578 at the beginning of September; the difference represented a contraction of 5.6 per cent. As already mentioned, the most pronounced declines occurred in works turning out automobiles and other land vehicles and in rolling and forging mills. Agricultural implements, machinery and sheet metal works, foundries and machine shops, in addition, were less fully engaged. On the other hand, steel shipyards and tool factories were considerably busier. Ontario firms registered the bulk of the decline, but there were also reductions in Quebec and the Maritime Provinces. In the Prairie district and British Columbia, however, improvement was recorded. Curtailment on a somewhat smaller scale had been indicated at the beginning of October of last year, when the index number stood over 9 points lower than at the period being surveyed.

**NON-FERROUS METAL PRODUCTS.**—The production of gold, silver and platinum articles showed an increase, but factories making lead, tin, zinc and copper goods were slacker. On the whole there was a decrease of 1.3 per cent in the employment afforded in the non-ferrous metal products group. According to returns from 108 concerns, 12,321 persons were employed in this industry as compared with 12,485

at the beginning of September. The contraction occurred very largely in Ontario, while in Quebec there was a slight increase in activity. Reductions in personnel on a considerably larger scale had been indicated on October 1, 1922, and the situation then was decidedly less favourable.

**MINERAL PRODUCTS.**—Factories turning out petroleum products in Quebec were slacker than at the beginning of September, and there was also general curtailment in coke, artificial ice and asbestos works. Statements were tabulated from 73 manufacturers in the mineral products group, with a total payroll of 9,326 persons as compared with 9,602 in the month before. The difference represented a decline of 2.9 per cent. The tendency during the corresponding period of last year had been favourable, but employment then was not in as great a volume as for the month under review.

**MISCELLANEOUS MANUFACTURING INDUSTRIES.** — Returns were received from 65 employers in this industry, whose payrolls comprised 3,702 persons, whereas at the beginning of September they had employed 3,923 workers. Factories making photographic appliances in Ontario were decidedly slacker.

#### Logging.

Continued activity was reported in logging camps. The 205 operators making returns enlarged their staffs from 15,742 at the beginning of September to 19,497 at the first of October. This increase of 23.9 per cent was about evenly distributed between Quebec and Ontario, while in British Columbia the tendency was downward. Employment during the corresponding period of last year had also increased, although not so extensively, and the situation then was less favourable than for the period being surveyed.

#### Mining.

**COAL MINING.** — A further small increase in activity was indicated in coal

mines in the Prairie Provinces, while in the Maritime district and British Columbia reductions in personnel were indicated. According to returns from 92 mine managers, 29,741 persons were employed in this industry as compared with 29,620 on September 1. This gain of .4 per cent was very much smaller than that registered during the corresponding period of last year, when the index number had stood some 4 points higher.

**METALLIC ORES.** — Substantial additions to staffs in gold, nickel and copper mines in Ontario were partly offset by reductions in British Columbia gold, silver, copper and zinc mines. Statements were compiled from 44 firms in the metallic ore mining group, whose payrolls comprised 12,069 persons as compared with 11,933 at the beginning of September. An increase on a rather larger scale had been indicated during the same month of last year, but the index number then was considerably lower than at the present time.

**NON-METALLIC MINERALS, OTHER THAN COAL.** — Continued though moderate expansion was experienced in this industry at the beginning of October, when 129 workers were added to the staffs of the 68 concerns reporting. They employed 6,898 persons as compared with 6,769 in the last report. Practically all of this increase of 1.9 per cent occurred in asbestos mining

in Quebec. During the corresponding period of last year very little change in the situation had been shown.

#### Transportation.

**STREET RAILWAYS AND CARTAGE.** — Fluctuations in employment in this division in different parts of the country resulted in a small net increase. In the Maritime Provinces, Quebec and Ontario, minor declines were recorded on street railways, while in the Prairie Provinces considerable improvement was indicated by grain elevators. One hundred and three firms had in their employ 20,347 persons as compared with 20,289 at the beginning of September. Increases in personnel on a very much larger scale had been reported on October 1, 1922, and the index number then stood some 8 points higher than at the present time.

**STEAM RAILWAYS.** — Employment in this industry also showed considerable fluctuations; in the Maritime Provinces, Quebec and Ontario there were extensive losses, but counteracting additions to staffs were registered in the Prairie Provinces and British Columbia. Reports were received from 109 concerns and divisional superintendents employing 82,950 persons as compared with 82,897 on September 1. Substantial expansion had been indicated at the same period of last year, but conditions then were not as favourable as for the period being reviewed.

**SHIPPING AND STEVEDORING.** — The number of men engaged in this indus-

try showed a large increase at the beginning of October, mainly in Quebec and the Maritime Provinces. In Ontario and British Columbia there were declines. A total working force of 14,279 persons was reported by the 62 firms making returns, who had employed 11,473 workers in the preceding month. There was, therefore, an increase of 24.5 per cent. Reductions in payroll had been indicated during the corresponding period of last year, but the level of employment then was higher than at the present time.

#### Construction and Maintenance

**BUILDING CONSTRUCTION.** — For the first time since the end of February, the trend of employment in building construction was unfavourable. Although a contrary tendency had been indicated at the beginning of October, 1922, the volume of employment then was considerably smaller than in the month being surveyed. According to returns from 308 building contractors, they employed 28,071 persons on October 1, a number 1,753 smaller than at the beginning of September. All provinces shared in this decline of 5.9 per cent, the losses in Quebec and Ontario being most extensive.

**HIGHWAY CONSTRUCTION.**—A further large decrease in staffs was shown in this industry, the 85 employers reporting having released 1,656 persons since the preceding month. They employed 16,347 persons as compared with 18,003 at the beginning of September. All provinces, except those of the Maritime district and British Columbia, shared in the decline. Substantial improvement had been reported in October of last year.

**RAILWAY CONSTRUCTION AND MAINTENANCE.** — Heavy and general contraction was evident in this industry at the beginning of October. This repeats the movement experienced at the same period of last year, although the losses then were less severe than at the present time. The index number, however, was not quite so high as on Oc-

tober 1, 1923. Reports were compiled from 31 concerns and divisional superintendents employing 44,078 persons, as compared with 51,296 at the beginning of the previous month. Nearly half of this decline of 14.1 per cent occurred in the Prairie Provinces, while the losses in Quebec and Ontario were also noteworthy.

#### Services

**HOTELS AND RESTAURANTS.** — The closing of summer hotels caused comparatively large losses in employment in this industry. The declines were general throughout the country. Seventy-two hotels and restaurants employed 7,804 persons as compared with 8,631 at the beginning of September. Rather smaller reductions had been indicated during the corresponding period of last year, when the index number stood a good deal lower.

#### Trade

**RETAIL.** — Retail stores continued to increase their sales force moderately; 199 shops, with an aggregate payroll of 34,709 persons, reported that they had taken on 307 extra persons, a gain of .9 per cent. Ontario registered the

greater part of this increase, although improvement was also reported in the Maritime Provinces and British Columbia. The situation was somewhat better than at the beginning of October, 1922, although additions to staffs on a somewhat larger scale had been indicated.

**WHOLESALE.** — The employment afforded in wholesale establishments showed a one per cent increase at the beginning of October. The gain was reported chiefly in Ontario. Statements were received from 341 concerns employing 20,251 persons as compared with 20,047 in September 1. The index number of employment at 98.2 was slightly higher than during the same period of last year; improvement had also been indicated at that time.

The table on page 1281 gives the index numbers of employment by industries as at October 1 and September 1, 1923, and October 1, 1922, and 1921. The first column shows the proportion of employees in each industrial group in relation to the total number of workers reported in all groups for the month under review. (Number of workers employed in January, 1920, equals 100).

### UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING SEPTEMBER 30, 1923, AS REPORTED BY UNIONS MAKING RETURNS.

**T**HE present article on unemployment among members of trade unions deals with the situation reported during the quarter ending September 30, 1923. Continued increases in the volume of employment have been reported since the end of June, the changes however, being slight. At the end of the preceding quarter the percentage of idleness stood at 3.4 as compared with percentages of 2.9 at the end of July, 2.2 at the close of August and 2.0 on September 30. When comparing the latter date with September 30, 1922, an improvement of .8 per cent

was registered. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting).

TABLE I.—PERCENTAGE OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES.

Month	N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Jan. 1920	2.7	4.0	3.4	2.7	4.5	4.9	4.0	11.8	4.0
Feb. 1920	5.1	4.4	2.3	2.9	4.6	5.2	5.1	10.2	4.0

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters for 1916-17-18 and by months for 1919-20-21-22 and to September of this year. The curve which has pursued a downward course during the first half of this year with the exception of January and March continued in the same direction during the quarter under review and the trend is similar to that followed during the corresponding quarter of last year.

Quebec, Manitoba and British Columbia reported less unemployment during July than in the previous month. In New Brunswick and Saskatchewan no change was reported and in the other provinces conditions were slightly less favourable.

During August the situation continued to improve and all provinces with the exception of Ontario and Manitoba registered more activity than in July. The change in Ontario and Manitoba, however, was slight.

In September more employment than in August was afforded trade unionists in Ontario, Manitoba and Alberta but in

the other provinces a slightly greater volume of inactivity was shown.

Table I on page 1283 summarizes the returns by provinces and table III on page 1288 shows the percentages of unemployment reported in the different groups of industries.

During July the situation among workers in the manufacturing industries was better than in July of last year, pulp and paper, textile, iron and steel and glass workers and printing tradesmen all reporting smaller percentages of unemployment. In the

building group no change was manifested and employment for transportation workers was on a higher level.

In August improvement was recorded over the corresponding month of last year, the mining, manufacturing and transportation industries all reporting a greater volume of employment. Workers in the building trades, however were slightly less fully engaged.

The manufacturing industries reported a smaller percentage of idle members during September than at the close

of the same month last year, pulp and paper and iron and steel workers reporting more activity. Transportation workers were also better employed but in the mining, building and retail trade groups employment was on a slightly lower level.

The accompanying tabulations (Table II) show in some detail the returns

for the month ending September 30, 1923 for which month returns were received from 1,475 labour organizations with an aggregate membership of 151,461 persons, 3,018 of whom were out of work, a percentage of 2.0. The table also gives the general percentages of unemployment in the various trades and industries for July and August.

TABLE III.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

month	Fishing	Lumbering and logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufactures	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA DURING THE PERIOD JULY-SEPTEMBER, 1923

---

**R**EPORTS from the offices of the Employment Service of Canada indicate a considerable expansion in the volume of business transacted during the third quarter of 1923 as compared with the same period a year ago. The enlargement is shown in an increase of 14.3 per cent, in opportunities for employment, a gain of nearly 15 per cent in applications, while placements of workers exceeded those of the same quarter last year by more than 21 per cent. The chart on page 1292, which accompanies the article on the work of the employment offices for September, 1923, shows the extensive seasonal variation in the curves characteristic of this period. During July, applications, vacancies and placements, rose slightly, recovering from the depression at the end of June. The commencement of the demand for harvesters and thresher hands early in August was reflected in the rapid and abrupt rise of the curves, the peak of the harvest movement being attained during September. At this time the curve of vacancies reached a point higher than at any previous period, with the curves of placements and applications approximating it closely. During the latter part of September the inevitable reaction was recorded in a precipitous drop to the pre-harvest level.

During the period July-September the offices reported that they had made 164,367 references to positions and had effected a total of 159,601 placements, as compared with 131,603 during the same quartetr of 1922. The number of placements in regular employment was 137,294, of which 126,820 were of men and 10,474 of women. The placements in casual work during the quarter totalled 22,307. Vacancies notified by employers to the Service totalled 193,770, of which 164,664 were for men and 29,106 for women, as compared with a total of 169,548 vacancies during the same period a year ago. The number of applications for employment registered at the offices was 183,989 (153,960 of men and 30,029 of women) as contrasted with 160,350 during the corresponding period of 1922.

The accompanying table gives the vacancies and placements by industries of the offices of the Employment Service of Canada in the various provinces during the period July-September, 1923. The high percentage of vacancies and placements in the farming group is entirely characteristic of this quarter.

Elsewhere in this issue will be found a report in detail of the transactions of the employment offices for the month of September, 1923.

## EMPLOYMENT OFFICE REPORTS FOR SEPTEMBER, 1923

THE continued demand for thresher hands and harvesters in the prairie provinces was reflected in the increased business reported by the offices of the Employment Service of Canada during September, 1923. The demand for workers, very great during the month of August, reached its peak during the early part of September, the registration and placement of applicants following very closely. A very marked expansion is recorded in comparison with the corresponding period of 1922. The accompanying chart, which is based on daily averages over half-month periods, illustrates the precipitous rise in applications, vacancies and placements, the curves attaining a level higher than at any previous time in the records of the Employment Service. The decline in business during the latter half of September may be noted in all three curves and is the re-action from the peak of the harvest period. The offices reported that applications for work averaged

3,327 and 2,265 daily during the first and second half of September, as compared with 2,105 and 2,210 daily during the same periods of last year. During the latter half of August, 1923, applications averaged 3,121 daily. The average number of vacancies reported by employers to the Service was 3,977 daily during the first half of September, as contrasted with 3,327 during the previous period and with 2,705 daily during the same period last year. During the latter half of the period, vacancies averaged 2,445 daily, as compared with 2,100 during the same period a year ago. The average number of placements made daily by the offices during the first half of September was 3,044 as compared with 2,828 during the preceding period and with 1,743 during the corresponding period of 1922. Placements during the latter half of September averaged 1,939 daily, in contrast with 1,846 during the same period last year. Of the placements made during the per-

iod under review, the average number in regular employment was 2,717 and 1,594 daily, and in casual work 327 and 345 daily during the first and second half of the month respectively.

The following table gives the placements effected to date by the offices of the Employment Service:

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923 (9 months).....	260,879	92,296	353,175

During the month of September the offices made 61,519 references to positions and effected a total of 59,800 placements. The placements in regular employment numbered 51,740, of which 48,333 were of men and 3,407 of women. Placements in casual work totalled 8,060. The number of applications for work reported at the offices was 67,097, of which 56,895 were from men and 10,202 from women. Vacancies for men totalled 67,065 during the period, while opportunities for employment for women numbered 10,021, — a total of 77,086.

Placements in regular employment by provinces were as follows: Nova Scotia, 714 men, 68 women; New Brunswick, 307 men, 113 women; Quebec, 1,383 men, 432 women; Ontario, 8,933 men, 1,142 women; Manitoba, 8,846 men, 496 women; Saskatchewan, 17,712 men, 452 women; Alberta, 7,917 men, 325 women; British Columbia, 2,521 men, 379 women.

#### MARITIME PROVINCES

A few orders for workers for fall ploughing were received at Amherst and New Glasgow. Little change was reported in the building and construction group, calls for carpenters, painters, plasterers, etc., being received in considerable numbers. Outside construc-

tion work was brisk with a number of men placed on sewer work and street paving. Sawyers, pulpwood and hardwood cutters and loggers, were in demand at Amherst, Moncton and St. John, with sufficient applicants to fill the positions.

#### QUEBEC

In the province of Quebec a slight decline was reported in the demand for farm workers. The construction industries were active, with a slight falling off in the demand for labour for work on highways and provincial roads. Requests for bricklayers, plasterers, stone-masons and building labourers, were received at all the offices. The seasonal demand for loggers and bushmen was well under way, calls being registered at Quebec, Hull and Montreal. Experienced women applicants were hard to secure to meet the increased demand for general servants.

#### ONTARIO

In most districts numerous orders for general farm labour were received, while at the offices at Hamilton, Toronto, Niagara Falls and Chatham, fruit pickers, sugar beet and tobacco workers, were called for. Activities in the construction group were brisk, applicants for road work, street paving and outside work, being readily absorbed. No extensive building was under way, although carpenters, masons, bricklayers and inside finishers were required at Kingston, Oshawa, Cobalt, Timmins and St. Thomas. There was a demand for section labourers and extra gang hands at London, St. Thomas and Ottawa, while many railway construction labourers were sent to points near North Bay, Sudbury and Timmins. The seasonal demand for loggers had commenced, the offices at Sudbury, Sault Ste. Marie, Timmins, Port Arthur and Pembroke, reporting a large number of orders. Millmen, pulpwood cutters, sawyers and teamsters were required at North Bay, Ottawa and Cobalt. In the manufacturing industries some keenness in demand was

\*106 Placements effected by offices since closed.

shown. At Belleville, Oshawa and Toronto, polishers, moulders and auto workers, were required, while at Kingston, Kitchener and Peterborough, calls were received for woolen weavers, spinners and textile workers. Men for shipping and stevedoring occupations were in demand at Sarnia and Sault Ste. Marie, with a noticeable scarcity of experienced marine firemen and deck hands. In the mining group a number of miners and machine runners were placed from Cobalt and Ottawa. Continued scarcity of domestic workers was reported, the number of orders being greatly in excess of the supply of applicants.

#### MANITOBA

During the early part of September the chief work of the offices consisted of the placement of thresher hands and harvesters, while latterly calls were received for experienced men for fall ploughing. The demand in this group met with a very satisfactory response and no difficulty was found in securing the majority of workers. Requirements in the construction group consisted mainly of vacancies for skilled building tradesmen and mechanics. An urgent call for construction labourers and telegraph workers was reported from Winnipeg. Extra gang hands, section men and teamsters, were placed with the railway companies for maintenance work near Brandon, Dauphin and Portage la Prairie. While the office at Winnipeg received a number of orders for bushmen for the camps in Western Ontario, few placements were made owing to the continued demand for harvesters. Improvement was noted in the employment offered for women workers, there being a steady demand for hotel and household help for city and country.

#### SASKATCHEWAN

Harvesting and threshing activities were responsible for the continued and greatly augmented demand, which the offices were able to meet satisfactorily. During the early part of the month at

Estevan, Moose Jaw, Prince Albert and Saskatoon, a shortage of experienced harvest hands was reported, while at Regina and Swift Current, gas engineers and separator men were available with few vacancies offered. Toward the latter part of the month the number of orders in this group was slightly curtailed. In the construction group vacancies were offered for teamsters, road graders and labourers, while all the offices had many requests for carpenters, plumbers and building tradesmen. Owing to the harvest slight difficulty was experienced in filling orders from the railway companies for linemen, section hands, steel gang labourers and telegraph crews. At Estevan a few miners and mine labourers were required. The demand for domestic workers was fairly brisk with a slight slackening in the number of positions offered in the country.

#### ALBERTA

A brisk, though declining, demand for harvesters marked the agricultural group in this province. Placements, however, were still very numerous. Orders for general labour for road and sewer work were received and filled at Drumheller and Edmonton, while irrigation work at Medicine Hat and park development work at Banff called for many labourers. A few men were placed as extra gang and section workers from Lethbridge and Calgary. The rising demand for bushmen for logging camps was met without difficulty from Edmonton, Lethbridge and Calgary, with further improvement anticipated for the coming month.

#### BRITISH COLUMBIA

The agricultural district appeared to be supplied with sufficient farm workers, but in the fruit districts many pickers were required. Building tradesmen and mechanics were well employed and at Victoria, Vancouver, Nanaimo, Prince Rupert and other points, vacancies were offered for carpenters, plasterers and

decorators. Work on roads, highways and street paving, continued near Fernie, Nelson, Revelstoke and New Westminster, while harbour development at Nanaimo and irrigation work at Vernon employed a number of men. A few vacancies for railway maintenance work were available. The demand for experienced loggers was in excess of the supply, the requirements being registered mainly at Vancouver, Prince Rupert, Revelstoke, Nelson and Cranbrook. Calls for tiemakers, millwrights and sawyers, were received and filled from New Westminster, Vancouver and Victoria. The mining industry was active, with miners and muckers in great demand. At Fernie the office placed a number of fire fighters. The increased activities in the Okanagan Valley created a demand for fruit packers and labellers, several of whom were placed from Vancouver and Victoria.

#### The Movement of Labour

During September, 1923, the offices of the Employment Service of Canada made 51,740 placements in regular employment, of which 42,296 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of these 6,765 were granted the Employment Service reduced transportation rate, 4,608 going to points within the same province as the despatching office and 2,157 to other provinces.

The offices in Quebec issued 375 special certificates, 165 of which were granted to bushmen going to lumber camps in the province from Hull, Montreal and Quebec, and 210 to loggers and lumbermen going to North Bay, Sudbury and Sault Ste. Marie, Ont. Of the 1,232 certificates issued by the Ontario offices to persons going to points within the province, about 700 were bushmen, loggers, sawmill men and pulp workers, going to camps in the vicinity of North Bay, Sault Ste. Marie, Port Arthur, Fort William and Sudbury; and more than 400 were labourers and

construction workers for railway extension work near North Bay, Timmins and Port Arthur. Five bricklayers were transferred to Cobalt from Toronto, Ottawa and Hamilton; one surveyor was sent to employment from Kingston to Niagara Falls, one gas engineer from Ottawa to North Bay, 2 stonemasons from Toronto to Kingston. The office at Fort William transferred one farmhand to the Winnipeg district, while the office at Sudbury sent two labourers to employment at Hull, Que. Manitoba offices issued 3,019 certificates, of which 1,128 were farm helpers, 18 were teamsters and labourers, and 23 were domestic servants going from Winnipeg and Portage la Prairie to points within the province. Of the 353 workers sent to points near Port Arthur, Ont., 5 were women domestics, 3 were pipefitters and 123 were railway construction labourers, 178 were bush workers, the remainder being sawmill men, station workers and teamsters. To points in Saskatchewan the offices transferred 1,434 workers, of which 1,415 were harvesters and farm labourers, 3 were engineers going to Regina and Saskatoon, 8 were women domestics, 6 labourers, 1 cook and 2 dredge operators. From Winnipeg 19 harvest workers, 37 construction labourers and 1 domestic servant were sent to employment at Calgary, Edmonton and other points in Alberta. Saskatchewan offices despatched 1,094 workers at the reduced rate, 1 domestic servant to Montreal and 4 harvest hands to Edmonton and Calgary. Of the provincial transfers the offices sent 1 store clerk to Regina, 1 carpenter to Kerrobert, 4 camp cooks to points within the province. From Regina, 1 lineman and 3 cooks were sent to Moose Jaw, 13 miners to Estevan, the remainder being harvesters and thresher hands. The number of workers who benefited by the special rate in Alberta was 691, of whom 1 was a farmer going from Calgary to Saskatoon. The majority of the certificates were issued to harvest workers, with a few miners, bushmen and surveyors, all going to employment at points

within the province. The offices in British Columbia transferred 46 workers to Saskatchewan, of whom 2 were school teachers going from Vancouver to Swift Current, and the remainder were farm hands from Vancouver, Victoria, Vernon and Nelson. The 42 transfers to Alberta offices consisted of farm workers. The number of workers sent at the reduced rate to points within the province was 263. These included miners from Nelson to Cranbrook, mill hands, bushmen, construction labourers,

teamsters and carpenters, to various points within the province, and fruit pickers and packers from Vancouver and Victoria to points in the Okanagan district.

Of the 6,765 persons, who benefited by the Employment Service reduced rate, 2,173 were carried by the Canadian National Railways, 4,327 by the Canadian Pacific Railway, 1 by the Pacific Great Eastern and 264 by the Temiskaming and Northern Ontario Railway.

---

### BUILDING PERMITS ISSUED DURING SEPTEMBER, 1923

**T**HE value of the building permits issued showed a slight decline during September as compared with August and there was also a small decrease as compared with September of last year. According to reports from 56 cities the estimated cost of building work during September was \$10,485,613, while in August it stood at \$11,541,593 and in September, 1922, at \$11,424,119. There was, therefore, a reduction of \$1,055,980 or 9.1 per cent in the former and of \$938,506 or 8.2 per cent in the latter comparison.

Forty-seven cities furnished detailed statements showing that they had issued nearly 1,200 permits for dwellings at a proposed cost of approximately \$5,000,000. Some 2,900 permits were issued for other buildings at an estimated valuation of over \$4,800,000. As has been mentioned in previous reports the construction of several buildings is frequently authorized by a single permit; the number of buildings to be erected, therefore, would be larger than appears from the number of permits issued.

Nova Scotia, New Brunswick, Quebec and Alberta showed increases in the value of the permits issued as compared with August, 1923. The largest ac-

tual gain of \$882,752 or 35.3 per cent was recorded in Quebec, while Nova Scotia, with a gain of \$75,630 or 275.8 per cent, registered the most pronounced proportional increase. Of the declines reported in the remaining provinces, those of \$1,437,093 or 55.1 per cent in British Columbia and of \$720,943 or 13.3 per cent in Ontario were most noteworthy.

In comparison with the returns for September, 1922, Quebec, Alberta and British Columbia registered increases in prospective building. Quebec, with a gain of \$444,507 or 15.1 per cent, showed the greatest increase. The heaviest loss, of \$801,581 or 14.6 per cent, occurred in Ontario, but that in Manitoba of \$324,115 or 38.2 per cent was also pronounced.

An analysis of the returns from individual cities shows that in Montreal the value of the building permits issued during September exceeded that for August, 1923, and also for September of last year. In Toronto there were reductions in both comparisons, Winnipeg registered a rather larger total of anticipated building than in the preceding month, with a decline as compared with September, 1922, while in Vancouver there was a decrease in comparison with the August figures, but an

increase over September of last year. Quebec, Three Rivers, Brantford, Fort William, Hamilton, Kitchener, London, Niagara Falls, Port Arthur, Brandon, Edmonton and South Vancouver registered increases in the estimated cost of building in both comparisons.

The value of the building permits issued during the first nine months of this year showed a decline of 8 per cent as compared with the corresponding period of 1922, and an increase of 21

per cent over the first nine months of 1921. The total for 1923 was \$105,625,554, for 1922 \$115,113,336 and for 1921 \$86,970,449.

The accompanying table gives the value of the building permits issued during September, 1923, as compared with August, 1923, and September, 1922. The 35 cities for which records are available since 1910 are marked by asterisks.

FAIR WAGE CONTRACTS, OCTOBER, 1923

**D**URING October, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to fifteen fair wage contracts which were awarded by the Department of Public Works and two by the Department of Railways and Canals. These contracts contain the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Alterations to heating system in Immigration Building, Winnipeg, Man. Name of contractor, Cotter Brothers, Limited, Winnipeg, Man. Date of contract, September 18, 1923. Amount of contract, \$12,987.

Trade or class of labour	Rates of wages not less than	
	Per hour	Hours per week

Carpenters helpers.....	.50	50

Dredging on both sides of wharf, Berthier (en Bas), Que. Name of contractor, Lachance Limitée, Quebec, Que. Date of contract, September 26, 1923. Amount of contract, Class "B" 60 cents per cubic yard, scow measure.

Dredging in harbour, Cobourg, Ont. Name of contractors, The Frontenac Dredging Company, Limited, Toronto, Ont. Date of contract, October 10, 1923. Amount of contract, Class "B" 65 cents per cubic yard, scow measure.

Dredging the harbour, Collingwood, Ont. Name of contractors, The C. S. Boone Dredging Construction Company, Limited, Toronto, Ont. Date of contract, October 13, 1923. Amount of contract, Class "A" \$8.50 per cubic yard, scow measure; Class "B" 75 cents per cubic yard, place measure.

Dredging the channel, St. Michel de Bellechasse, Que. Name of contractors, The National Dock and Dredging Corporation, Limited, Levis, Que. Date of contract, October 22, 1923. Amount of contract, Class "A" \$4.00 per cubic yard, Class "B" 55 cents per cubic yard, scow measure.

Construction of freight shed, office room and shelter on wharf, Chicoutimi, Que. Name of contractor, A. Pedneault, Chicoutimi, Que. Date of contract, September 24, 1923. Amount of contract, \$13,555.70.

Construction of portion of wharf, Lotbinière, Que. Name of contractors, J. E. Lowrey and John Mulhall, Ottawa, Ont. Date of contract, October 1, 1923. Amount of contract, the following unit prices.

Description of work	Rate	
	\$	
1-Demolishing cap pieces, flooring and stringers, cribwork, removing steel plates.....	2.50	per cu. yd.
2-Concrete walls, pillars, etc....	9.00	" " "
3-New stone filling between concrete walls.....	1.50	" " "
4-Bituminous macadam flooring	1.85	" sq. yd.
5-Ladders in place.....	85.00	each
6-New mooring posts in place..	45.00	"
7-New mooring rings in place...	10.00	"
8-Replacing steel plates including bolts.....	200.00	lump sum
9-Tie rods.....	.07	per lb.

Superstructure of palm house at Rideau Hall conservatory, Ottawa, Ont. Name of contractors, King Construction Company, Limited, Toronto, Ont. Date of contract, September 28, 1923. Amount of contract, \$6,500.

Reconstruction of wharf in concrete, Lanoraie, Que. Name of contractors, F. A. Grothé and Fils, Montreal, Que. Date of contract, October 9, 1923. Amount of contract, the following unit prices.

Description of work	Rate	
	\$	
1-Removing of plank flooring..	.25	per sq. yd.
2-Removal of cribwork and stone filling.....	.75	" cu. yd.
3-Replacing of removed stone and levelling of wharf.....	.75	" " "
4-Concrete in place.....	10.00	" " "
5-Steel bars and anchor rods and plates.....	.0436	per lb
6-Mooring rings.....	5.00	each

Electric wiring in public building, Belleville, Ont. Name of contractor, Harris Brothers, Toronto, Ont. Date of contract, October 15, 1923. Amount of contract, \$1,800, and \$45 for lights on fittings.

Extension to breakwater, Battery Point, N.S. Name of contractors, The Reid Construction Company, Granville

Ferry, N.S. Date of contract, October 8, 1923. Amount of contract, 12 $\frac{1}{4}$  cents per cubic foot of cribwork complete.

Alterations to Assistant Receiver General's office in Dominion Savings Bank, St. John, N.B. Name of contractors, J. A. Grant and Company, Limited, St. John, N.B. Date of contract, October 18, 1923. Amount of contract, \$3,460.

Supply and installation of electric light transmission line, Partridge Island Quarantine Station, St. John, N.B. Name of contractors, J. E. Kane and J. S. Parker, St. John, N.B. Date of contract, October 18, 1923. Amount of contract, \$3,589.

Alterations to heating apparatus in Examining warehouse, Quebec, Que. Name of contractors, Brousseau and Frère, Quebec, Que. Date of contract, October 23, 1923. Amount of contract, \$6,600.

Extension to southern breakwater, Belle River, P.E.I. Name of contractors, W. Compton and A. J. Ross, Flat River, P.E.I. Date of contract, September 29, 1923. Amount of contract, the following unit prices.

Description of work	Rate	
	\$	
1-Bearing piles.....	.16 $\frac{1}{2}$	per lineal foot
2-Close piling.....	.06 $\frac{1}{2}$	" " "
3-Waling, cross timbers, and stringers, 12"x12".....	40.00	m. feet board
4-Intermediates, 6"x12".....	40.00	" " "
5-Planks 3" and 4".....	40.00	" " "
6-Curbing 10"x10".....	40.00	" " "
7-Brush and stone filling.....	1.50	per cubic yard
8-Drift and screw bolts, boiler plates and spikes.....	.088	per lb

#### DEPARTMENT OF RAILWAYS AND CANALS

Repairing and resurfacing of certain roadways and bridge approaches along the Welland Canal. Name of contractors,

The Law Construction Company, Limited, of Ridgeway, County of Welland, Ont. Date of contract, October 15, 1923. Amount of contract, schedule rates.

Construction of a storage annex, of approximately 1,000,000 bushel capacity, to the government elevator at Port Colborne, in the county of Welland, Ontario, on the existing pier and south of the present elevator. Name of contractors, E. G. M. Cape & Co., Montreal, Que. Date of contract, October 19, 1923. Amount of contract, \$376,000.

#### POST OFFICE DEPARTMENT

The following is a statement of payments made in October, 1923, for supplies ordered by the Post Office Depart-

ment subject to the regulations for the suppression of the sweating system, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of order	Amount of order
	\$
Making metal dating stamps and type and other hand stamps and brass crown seals	1,365.74
Making and repairing rubber stamps, daters etc.....	233.21
Making up and supplying letter carriers' uniforms, etc.....	3,455.80
Soales, new and repaired.....	461.40
Repairing boxes and hampers, etc.....	88.00
Supplying ink.....	38.10
Mail bag fittings.....	4,802.23
Letter carriers' satchels.....	88.00

### RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

#### Mining, Non-Ferrous Smelting and Quarrying

LADYSMITH AND WELLINGTON FIELD, E.C., CANADIAN COLLIERIES (DUNSMUIR)

LIMITED, AND EMPLOYEES IN THE EXTENSION AND SOUTH WELLINGTON MINES. — Agreement to be in effect from November 1, 1923, until October 31, 1924.

During term of agreement, Company to pay employees in classes of work named in Schedules A, B, C and D a day bonus of 91 cents, subject to the fluctuations of the cost of living, as determined by the Cost of Living Commission operated by the Federal Department of Labour.

Company to make no charge for carrying its employees on its railroad between Ladysmith and Extension Mines, special cars being provided.

System of dockage inspection as now practised at Nos. 1, 2 and 3 Mines, Extension; and No. 5 Mine, South Wellington, to be continued, with penalties for refuse matter as provided in Schedule A, including dismissal for excess refuse after investigation.

In event of the above penalty, party dismissed may appeal to the Company's District Superintendent, whose decision shall be final. Excess dockages and all unclaimed coal to be credited to the Employees' Gas Committee Fund.

Company on taking a miner from the face and requesting him to perform day work to pay him miner's day rate, but when Company has no work at face and miner elects to perform day work he shall be paid regular day work wage, pertaining to the class of work in which he engages.

Employees to elect an agreement committee at a pithead ballot, committee to consist of one employee representing underground employees at each of the following: No. 1 Mine, No. 2 Mine, No. 3 Mine and No. 5 Mine; and two employees to be members representing the surface employees designated on schedules C and D, employed at Extension, South Wellington and Ladysmith, and in event of Company opening a new mine, one member representing the same after it has been placed on an operating basis. Any member of the committee ceasing to be an employee of the Company shall cease to be a member of the committee. Any vacancy on the committee to be filled within seven days after it occurs. An underground employee cannot vote for a member to represent the surface men, nor can a surface employee vote for a member to represent the underground men.

The management of the Company and the agreement committee to meet on or about the first Saturday in each month. Special meetings may be called by management or by chairman or secretary of the committee.

Grievances or disputes to be taken up with overman or foreman, and failing a settlement matter to be laid before the member of the agreement committee of the mines or department where the employee concerned is employed. Committee to lay before the management any dispute arising between the em-

ployees and the mine officials, or any complaints of the employees, or any question regarding the agreement, and suggestions regarding improvement of working conditions or benefit to operations of the company.

Pending hearing and adjustment of any dispute or grievance, there shall be no stoppage of work, individually or collectively by the employees. Employees not to abandon work collectively in any way inconsistent with the agreement, nor individually except for good and valid reasons.

Operation of a mine not to be suspended in event of a fatal accident, but any employees to have privilege of leaving work to attend the funeral.

Any employee absent without permission for two or more consecutive days to be liable to dismissal without notice, and if absent without permission more than four working days in any month, to suspension or dismissal.

Fixed charges: Miners mining coal to pay Company 10 cents and 15 cents on alternate pay periods for sharpening tools. Axes to be sharpened by the miner. Employees to pay 45 cents per pay period (two weeks) for use of wash house. Employees to pay 35 cents per pay period for use of safety lamps (not including breakages).

Company to furnish coal at \$4.40 per ton to employees, but only one ton per month unless covered by a special order from the District Superintendent.

Employees in September, 1925, to call a meeting of all employees in mines of the Wellington-Extension Field, which are represented on the Employees' Agreement Committee and arrange to elect one employee for each unit, to form a committee to negotiate with the Company for a new agreement.

Employee off work through sickness or accident to have preference of his former working place or position, if competent to fulfill the duties.

**SCHEDULE A. — Mining, Yardage and Timbering.**

**Mining rate.** — Pick coal, Wellington Seams, for all seams now operating on base rate of \$1.01 $\frac{1}{4}$  per net ton of 2,240 pounds. Pick coal, Douglas seam, a base rate of 91 $\frac{3}{4}$  cents per net ton of 2,240 pounds.

**Yardage.** — The present system and rates prevailing in the mines to continue. At the beginning of each period management to fix a price to be paid under normal conditions in the various working places.

**Timbering.** — The present system and rates to continue.

If any new mines are opened up, the mining, yardage and timbering rates to be as agreed upon between the company and the agreement committee.

**Dockages.** — In Nos. 1, 2, 3 and 5 mines, Wellington-Extension, up to and including 100 pounds of refuse per car, double dockage; 100 to 200 pounds, confiscation of car; over 200 pounds, dismissal after investigation.

**SCHEDULE B. — Day rates.** Base rates as follows: Company miners, timbermen, tracklayers, driver bosses, \$4.20; fire bosses, \$4.99; timbermen helpers, \$3.50; bratticemen, \$3.85-\$4.20; roadmen, \$3.32-\$3.67; drivers, \$3.19-\$3.85; pushers, 2.80-\$3.66; motor-men, \$3.85; conductors, \$3.50, switch boys, \$1.75-\$2.80; winch drivers, \$2.80-\$3.85; drum runners, \$2.55-\$3.85; rope riders, \$2.15-\$3.85; door boys, \$1.47; cagers, \$3.50-\$3.85; bottomers, \$2.10-\$2.50; loaders, \$3.50-\$3.85; labourers, \$2.80-\$3.68; pumpmen, \$2.97-\$3.24.

**SCHEDULE C. — Surface.** Base rates per day: Electricians, \$4.00-\$4.74; surveyor's helpers, \$3.12 $\frac{1}{2}$ -\$3.75; power house engineers, \$4.26; fanmen, \$3.75; car repairers, \$3.04-\$4.29; carpenters, \$4.05-\$4.72; blacksmiths, \$3.97-\$5.19; blacksmiths' helpers, \$3.37; machinists, \$4.39-\$5.44; machinists' helpers, \$3.04-

\$3.37; lampmen, \$1.69-\$3.37; weighmen, \$3.57-\$4.05; boys on picking table, \$1.35-\$1.75; labourers, \$3.37; hoistmen, \$3.85.

**SCHEDULE D.—General surface.** Base rates per hour: Locomotive engineer, main line, 52 $\frac{1}{2}$  cents; yard, 50  $\frac{2}{5}$  cents; locomotive firemen, main line, 41 $\frac{1}{4}$  cents; yard, 35 cents; conductors, 46 $\frac{1}{4}$  cents; brakemen, 41 $\frac{1}{4}$  cents; car inspectors, 44 cents; wharf and bridge carpenters, 46-52 cents; wharf and bridge carpenters' helpers, 35-41 $\frac{3}{4}$  cents; washery foremen, 50 cents; section foremen, 46 cents.

ffiffil(|\*œ&

**CUMBERLAND, B.C. — CANADIAN COLLIERIES (DUMSMUIR) LIMITED, AND EMPLOYEES IN AND AROUND THE COMOX MINES.** — Agreement effective from November 1, 1921, until October 31, 1923, and renewed to October 31, 1924.

Employees engaged in classes of work named in schedules A, B, C and D to receive a day bonus subject to fluctuations in the cost of living as determined by the Cost of Living Commission operated by the Federal Department of Labour.

Provisions of the agreement regarding dockage, penalties for excess refuse, miners on day work, the duties of the Agreement Committee, procedure in event of grievances or disputes, fatal accidents and absence from work are similar to those in the agreement for the Lady-smith-Wellington district.

The Agreement Committee for the Comox Mines to consist of two members representing underground employees at No. 4 Mine; two members representing underground employees at No. 5 Mine; two members representing the surface employees designated on Schedules C and D employed at Nos. 4, 5 and 6 Mines.

**SCHEDULE A. — Mining, Yardage and Timbering Mining Rates.** — Base rate for all seams, 84 cents per ton.

**Machine coal.** — Present system and rates to continue.

Yardage. — Present system and rates to continue except that at beginning of each period management may fix a price to be paid under normal conditions in the several working places.

Timbering. — Nos. 4 and 5 Mines: Rope posts, \$1.05; stringers, under 14 feet, \$1.05 per set; stringers, 14 to 16 feet, \$1.40 per set; stringers, 16 feet, \$2.00 per set; bridgesticks, \$2.50. Over 16 feet by special arrangement. Cogs, five feet and under, \$1.05 per cog; over five feet, 20 cents per foot additional.

If any new mines are opened by the company in the Comox district, mining, yardage and timber rates to be as agreed between company and the agreement committee.

Dockage inspection. — Mine No. 4, Comox: Up to and including 100 pounds of refuse per car, double dockage; over 100 pounds and up to 200 pounds, confiscation of car; over 200 pounds, dismissal after investigation. Mine No. 5, Comox: Up to 50 pounds of refuse per car, double dockage; 50 to 100 pounds, confiscation of car; over 100 pounds, dismissal after investigation.

SCHEDULE B. — Base rates per day: Company miners, timbermen, tracklayers, driverbosses, double driver, rockmen, head cagers, machine runners' helpers, coal cutting, \$4.20; fire bosses, \$4.99; timbermen helpers, single driver, pushers, motormen, slopemen, switchmen, rope riders, stablemen, pumpmen, linemen, mechanics' helpers, labourers, brushers, \$3.85; bratticemen, \$3.85-\$4.20; hoistmen, cagers, \$3.50-\$3.85; door boys, \$1.75; machine runners, coal cutting, \$4.55.

SCHEDULE C.—Surface (mines). Base rate per day: Hoistmen, \$5.07; blacksmiths, ropemen, \$4.39; substitution men, \$4.21; car repairers, head cagers, \$4.05; weighmen, compressor men, \$3.71; picking table men, lampmen, labourers, \$3.37; blacksmiths' helpers, \$3.04-\$3.37.

SCHEDULE D. — Surface (general). Rates per day (eight hours): Machinists, mechanics, \$4.64; blacksmiths,

\$4.80; blacksmiths' helpers, \$3.60; carpenters, \$4.20; carpenters' helpers, labourers, \$3.36; mechanics (second class), \$4.32; main line engineers, \$4.52; switch engine engineers, \$4.24; firemen, passenger conductors, brakemen, \$3.44; freight conductors, roundhouse men, \$3.76; section foreman, \$3.84.

#### Manufacturing, Animal Foods

MOOSE JAW, SASK. — SASKATCHEWAN CREAMERY COMPANY, AND EMPLOYEES, MEMBERS OF SASKATCHEWAN BROTHERHOOD OF STEAM AND OPERATING ENGINEERS, LOCAL No. 2. — Agreement in effect from July 4, 1920, until March 1, 1921, and from year to year thereafter, with 60 days notice of change. Agreement still effective in 1923.

Hours per day, eight, beginning at any time appointed by the management. Wages per hour, 65 cents; overtime and Sunday work, time and one half. In case of vacancies to be filled, seniority of service to receive preference, other things being equal.

#### Manufacturing, Iron, Steel and Products

VANCOUVER, B.C. — CERTAIN LOCAL ROOFING AND SHEET METAL WORKS, AND AMALGAMATED SHEET METAL WORKERS' UNION, No. 290. — Agreement effective from September 15, 1923, to June 1, 1924, with 90 days notice from March 1, 1924, of change.

Only union members to be employed or men agreeable to join union. If union fails to supply help, other help may be employed temporarily.

Sheet metal work and roofing must be supplied and erected by a sheet metal contractor. Parties to agreement not to work on buildings where union employees have withdrawn or where there is outstanding debt on either side. If during progress of work promised money is unjustly withheld work may be stopped until matter has been adjusted.

No union member to do sheet metal work, roofing, etc., except as a journeyman, providing employer agrees to divide work satisfactorily. Joint Com-

mittee to deal with violation of this provision.

Employer not to request employees to install unfair material unless same is covered by patent rights.

Minimum wage per hour \$1.00; junior members, three-quarters of journeyman's rate.

A permanent Joint Committee of three members from each party to settle differences, and have power to draw up rules of procedure and to submit same to both parties.

Any dispute not settled thus to be investigated by an International officer. No strike or lockout to take place before decision is rendered.

Any employee laid off before noon to receive four hours pay; before 5 p.m. eight hours pay.

#### Transportation

MONTREAL QUE. — GRAND TRUNK RAILWAY, AND EMPLOYEES HANDLING FREIGHT AT MONTREAL WHARF, DURING THE SEASON OF NAVIGATION. — Agreement in effect from June 1, 1923, with 30 days' notice of termination or revision.

Hours of service to start between 7 a.m. and 1 p.m. for men ordered out for day work, and at 7 p.m. for night work. Provision made for duration of meal period.

Employees ordered to work between 7 a.m. and 1 p.m. to receive a minimum of three hours pay at the prevailing rate. Employees called out before 7 a.m. or after 6 p.m. or on Sundays or holidays to be paid a minimum of two hours pay at the prevailing rate. Rate for Sundays and holidays, time and one-half.

Employees to have free transportation and leave of absence without pay to attend general committee meetings at request of general chairman. Employees attending court or appearing as witnesses for the Railway at request of the management to have transportation expenses, and pay for time lost.

Employees assigned temporarily to higher or lower positions for two hours

or more in a day to have corresponding higher or lower rates of pay.

In filling vacancies and permanent new positions seniority, merit and ability to govern. In reduction of staff seniors to be retained and those laid off to be given preference of re-employment. Full seniority to be retained by employees re-employed within one year. Employees failing to report for duty or to give reason within ten days of notification to be dismissed.

No employees to be suspended, discharged or disciplined without a hearing. If blameless, employee to be reinstated and paid for time lost. If treatment is considered unjust appeal may be made to a higher officer within fifteen days.

Wages per hour — day work: Checkers, foreman cooper, 54 cents; coopers, 50 cents; sealers, 49 cents; truckers, 48 cents.

For time between 6 p.m. and 7 a.m., 5 cents per hour above schedule.

#### Service — Public and Municipal

MOOSE JAW, SASK. — CITY OF MOOSE JAW AND SASKATCHEWAN BROTHERHOOD OF STEAM AND OPERATING ENGINEERS, LOCAL No. 2.

Agreement effective from April 1, 1922, to March 1, 1923, has been renewed intact to March 31, 1924. This agreement was summarized in the LABOUR GAZETTE for January, 1923.

#### Service — Recreational

WINDSOR, ONT. — LOCAL EMPLOYEES AND WINDSOR FEDERATION OF MUSICIANS, LOCAL No. 566, AMERICAN FEDERATION OF MUSICIANS. — Contracts in effect from September 3, 1923, to June 9, 1924.

The minimum weekly wage scale differs for each class of theatre. Relief pianist or organist to receive \$1.50 per hour or fraction thereof. Pianist or organist alone at any house with no orchestra, double leader's salary. Relief pianist, double regular scale. This rate may be reduced by Board of Directors during the summer. If any

house changes from afternoon and evenings to evenings only 75 per cent of rates in contract to apply. Scale for occasional matinees in this case, leader, \$5.00, sidemen, \$3.25.

Contract rates to be less if agreement is effective for a year.

Extra men: Afternoons, \$3.25; evenings, \$6.00; afternoon and evenings, \$8.50. Extra men for one week, or more, \$2.00 above regular men. Scale is for

six days per week, to not later than 11 p.m. each day. Maximum hours, afternoons 2; evenings 4. Relief to be provided for orchestra where music is continuous. Special provisions for rehearsals.

Disputes to be referred to arbitration.

If house has not sufficient bookings to continue in business contract may be terminated. Whenever any member is not required to render service, he shall receive full salary.

### A COMPARISON OF REAL WAGES IN LONDON AND CERTAIN CITIES THROUGHOUT THE WORLD, MARCH-AUGUST, 1923

IN the July issue of the *British Ministry of Labour Gazette*, there appeared an article giving the results of an inquiry into the purchasing power of wages for certain trades in terms of food in a number of the chief cities in various countries in March, 1923. In succeeding issues corresponding figures for the months April to August have been summarized.

The Minister of Labour secured figures as to the rates of wages for certain classes of labour and as to the retail prices of certain staple foods for March, 1923, from the governmental office, state or municipal, in each case, responsible for their collection, or from the published reports of such bodies. The method of computation was set forth as follows:—

The figures were used, first of all, to ascertain for each occupation, the quantities of bread, meat, flour, and so on, which could be purchased with the wages of 48 hours' work. It was found, for example, that the Berlin bricklayer's wage for 48 hours would purchase 390 lbs. of bread, or 123 lbs. of flour, or 10 lbs. of butter, or 227 eggs, and so on. The corresponding quantities purchasable with the wages of the London bricklayer were then taken as a basis and called 100, and a series of index numbers was computed, which showed, in respect of each article of food, taken separately, the relative purchasing power in London and in the foreign capitals under comparison, of the earnings of 48 hours in each occupation. In the case of the Berlin bricklayer referred to above, the numbers were found to be 88 for bread, 31 for flour, 26 for butter, 43 for eggs, as against 100 in each case for London.

The index number of real wages, or of the purchasing power of money wages, so calculated were then averaged, two tables being constructed and published, the first being a table of simple arithmetical averages, in which no allowance was made for the relative importance of each article of food, using the proportions in working class family consumption in the United Kingdom. It is the latter table which is kept up to date month to month. No allowance was made, however, for the number of workmen in each trade in calculating the average. The significance of the figures thus obtained was interpreted as follows:—

It may be well perhaps to state with some emphasis that the index numbers shown afford no absolutely safe basis for conclusions as to differences in the *general* level of real wages even in the selected cities. For this purpose it would be necessary to secure wages data for a much larger number of occupations, including those in which women are largely employed. Still less can the figures be accepted as accurately reflecting differences in *national* real wage levels. The most that can be claimed for them is that they afford a rough indication of the differences that existed on or about 1st March, 1923, between the real-wage levels of the selected categories of typical urban male labour in the various capitals.

It is also pointed out in the article that for an accurate measurement of purchasing power of wages in the various countries, figures as to items other than food would be required, especially figures as to rent and clothing. Owing to the scarcity of houses in some cities

and the restrictions imposed by law on rentals in some countries, the greatest divergence is known to exist in the rents. For instance, in Germany reports indicate that rent is a negligible quantity in working class expenditure, while in New York owing to high rentals, this item is very important in family expenditure. A comparison made from figures including rent, as well as food, would, therefore, show the purchasing power of wages in Berlin somewhat higher than a comparison using food

prices alone, and for New York, for instance, the reverse.

The accompanying table is the summary of the figures resulting from the investigation published in the July issue of the British *Labour Gazette* with the figures for all occupations for each month, April to August added. The changes in the figures from month to month are due to the changes in retail prices of foods as well as in the rates of wages.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1923

THE movement in prices during the month was slight. The average cost of a weekly family budget in terms of retail prices was slightly higher owing to seasonal advances in the prices of dairy products. Index numbers of wholesale prices calculated by various authorities were in the main somewhat lower, the only exception being the Department of Labour special index number of fifty commodities which rose slightly.

The cost per week of a list of twenty-nine foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.65 at the beginning of October, as compared with \$10.46 for September; \$10.23 for October, 1922; \$11.48 for October, 1921; \$16.92 for June, 1920 (the peak); and \$7.99 for October, 1914. Substantial increases occurred in eggs, butter, and cheese, while there were smaller increases in sugar, lard, bacon, milk and rice. The only important decline was in potatoes, though beef, evaporated apples, and prunes were also slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.16 for October, as compared with \$20.97 for September; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.92 for July, 1920 (the peak); and \$14.48 for October, 1914. Fuel and rent showed little change from the levels in September.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 238 commodities in 1913 as 100, weighted according to the importance of the commodities, declined slightly to 153.1 for October, as compared with 154.7 for September; 145.9 for October, 1922; 155.5 for October, 1921; 256.9 for May, 1920 (the peak).

In the grouping according to chief component material, four of the main groups were lower. The Vegetable Products group showed the greatest decline, due mostly to lower prices for

grains, flour and vegetables. A decline in the price of pig iron caused a decline in the Iron and its Products group. The Non-Ferrous Metals group and the Chemicals group also reached lower levels, the former because of decreases in the prices of copper, tin and zinc. The Animals group showed the largest advance, and this in spite of lower prices on live stock. The advance was due mainly to increases in the prices of milk and its products and in eggs. The Textile group, the Non-Metallic Minerals group and the Wood Products group each showed small advances.

In the grouping according to purpose, both consumers' goods and producers' goods declined slightly, the former because of lower prices for breadstuffs, fruits, meats and vegetables, and the latter mainly because of lower prices for materials for the Meat Packing and the Milling industries.

In the grouping according to origin, farm products were lower while marine products and forest products were up.

The index number based upon prices of 271 articles in 1890-1899 as 100, published by the Department of Labour since 1910, stood at 221.2 for October, as compared with 221.3 for September; 219.8 for October, 1922; 229.2 for October, 1921; 356.6 for October, 1920 (the peak); and 138.7 for October, 1914. The principal advances occurred in the prices of sheep, milk, eggs, fresh fruits, sugar, raw cotton, anthracite coal and linseed oil, while the prices of western grains, cattle, hogs, dressed lamb, cheese, potatoes, flour, pig iron, Connellsville coke, gasoline and raw rubber were substantially lower. Compared with a year ago all the main groups were higher, except animals and meats, hides, leathers and boots, fuel and lighting, house furnishings, drugs and chemicals, and the miscellaneous group.

The index number published by the Department since 1910 has been reconstructed back to January 1919, by the

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS  
 OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA.

Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913 (LABOUR GAZETTE, June, 1923, pp. 689-695). Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in

its three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

The special index number (comprising fifty of the more important commodities selected from the 271 in the departmental list) including twenty foods, fifteen raw materials and fifteen manufactured goods, based upon price levels in 1913 as 100, advanced slightly to

DEPARTMENT OF LABOUR INDEX NUMBERS OF WHOLESALE PRICES BY PRINCIPAL GROUPS OF COMMODITIES FOR OCTOBER 1923, SEPTEMBER 1923, OCTOBER 1922, 1921, 1920, 1919, 1918, 1917, 1916, 1915, 1914 AND 1913.

151.9, as compared with 151.6 for September; 147.3 for October, 1922; 147.7 for October, 1921; 221.5 for October, 1920; and 102.6 for October, 1914. This increase was due to higher prices for sheep, eggs, milk, halibut, canned tomatoes, granulated sugar, raw cotton, and anthracite coal.

The index of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, declined to 149 for August, as compared with 151 for July and 149 for August, 1922. All groups were lower except consumers' goods, which were substantially higher.

Professor Michell's index of wholesale prices based on forty articles, twenty foods and twenty-manufacturers' goods, with prices during 1900 to 1909 as 100, declined from 178.8 for September to 174.2 for October. The decline was due mostly to lower prices for foodstuffs, though manufacturers' goods were also down somewhat.

The Canadian Bank of Commerce index of exports fell, while that for imports rose. The former stood at 152.07 for October, as compared with 153.29 for September, and the latter stood at 163.81 for October and 163.59 for September. The combined index of both imports and exports declined from 158.44 for September to 157.94 for October.

The table of retail prices and rentals shows the prices at the beginning of October of seventy-two staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to

month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month

and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an aver-

age family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices

Beef prices were again slightly lower in the average. Sirloin steak was 29.1c per pound in October as compared with 29.5 in September. Prices averaged slightly higher in Nova Scotia and Saskatchewan but were down in all the other provinces. Round steak was down from 24.1c per pound in September to 23.8c in October and shoulder roast from 15.5c per pound in September to 15.3c in October. Veal roast rose from an average of 18.4c per pound to 18.5c. Mutton also was slightly higher at 28c per pound while fresh pork was steady. Mess pork, however, was up in the average from 25.3c per pound in September to 25.5c in October. Bacon advanced to 39.3c in October from 38.9c per pound the previous month. Boiled ham showed little change. In fish, fresh cod and fresh halibut were down while salt herring and salt cod advanced slightly. Lard rose from an average of 22.4c per pound in September to 22.9c in October.

Continuing the advance which commenced in August fresh eggs were up from an average of 38.3c per dozen in September to 44.3c in October. The average price in July was 31.2c per dozen. Increases were general in all localities. Cooking eggs showed about the same general advance as fresh, averaging 39.7c per dozen in October, 34c in September, and 27.3c in July. Milk was slightly higher in the average being 11.5c per quart in September and 11.7c in October. Increases occurred in St. John, N.B., St. Hyacinthe, Montreal, Hull, Ottawa, Oshawa, Toronto, Guelph, Edmonton, and Lethbridge. Butter showed a general advance, dairy being up from an average of 35.4c in September to 39.2c in October, and creamery from 41.4c per pound in September to 44.2c in October. Cheese also averaged over 2c per pound higher at 33½c. Higher

prices were reported for nearly all localities.

Bread and flour were unchanged. Soda biscuits were down from an average of 17.9c per pound in September to 17.7c in October. Rolled oats were steady. Rice and tapioca were slightly higher, the former averaging 10.5c per pound and the latter 14.5c per pound. Canned tomatoes and peas were steady but corn was slightly higher. Onions were down from an average of 7c per pound to 6.4c. Potatoes declined from an average of \$1.99 per 90 pounds in September to \$1.58 in October. Evaporated apples and prunes were slightly lower. Raisins averaged 19.7c per pound in October as compared with 19.9c in September and currants 23.1c in October, and 23.3c in September. Raspberry jam was slightly higher at 98.5c per 4-pound tin. Canned peaches were up from an average of 31.2c per can to 31.6c in October. Corn syrup was slightly higher in the average at 49½c per 5 pound tin. Granulated sugar showed a general advance from an average of 11.3c per pound in September to 12.1c in October. Yellow sugar was also higher at 11.5c per pound. Cefee advanced slightly to 54c per pound. Black tea was also higher at 68.2c per pound as compared with 67.9c in September. Cream of tartar declined from 67.5c per pound in September to 66.4c in October.

Anthracite coal averaged \$17.85 per ton in October as compared with \$17.80 in September. Prices were lower in Fredericton and Saskatoon but advanced in Montreal, Ottawa, Peterborough, Orillia, Toronto, and Niagara Falls. Bituminous coal was up from \$11.33 per ton in September to \$11.45 in October. Hard wood, 4 feet long, declined from an average of \$12.69 per cord to \$12.58. Lower prices were reported from Brandon and Moose Jaw. Soft wood averaged \$9.47 per cord in October and \$9.42 in September. Coal oil showed little change.

Rent was steady.

### Wholesale Prices

The following statement as to the changes in the prices of important commodities during October has been issued by the Dominion Bureau of Statistics.

Grain prices were again the centre of interest. The high point in October for cash wheat No. 1 Manitoba Northern was attained on October 6, when the price was \$1.00-5/8 per bushel. By October 19 it had sagged to 95¼c. The average for the month was 97¾c as compared with \$1.06 in September. Early in October talk of governmental relief measures in connection with the American crop served as a somewhat bullish factor causing grain prices to rise sympathetically in Canada. The reports bore less weight, as the month progressed and several bearish influences succeeded in depressing prices. The official estimate from Argentine indicated a very large crop and importers carried on a hand-to-mouth business awaiting developments. Persistent rumours were extant of considerable grain exports from Russia to Germany and other European countries. Buying by English co-operative societies from Russia was also reported. Flax prices, No. 1 N. W. C., commenced the month at \$2.16¼ and owing to brisk buying by Canadian and American crushers rose by October 12th to \$2.19¾. After that date, with the news from Argentina, the market became easier and the month closed with flax at \$2.01¼. Oats No. 2 C. W. fell from 44c per bushel on October 1, to 41¼ on the 31st. In sympathy with the lower grain prices flour also declined; first patent selling at \$6.50 per 2-98's jute as compared with \$6.90 in September. Shorts dropped from \$32.05 to \$30.70 per ton. In contrast to other grain prices that for American corn rose during the month, the average for cash grain being \$1.21 in October and \$1.08 in September. Anticipation of very keen buying when the new crop is marketed in order to replenish low stocks brought prices to a high level. Favourable weather conditions for harvesting the new crop eased prices at the close of the month. Good demand for raw

sugar coupled with low Cuban stocks and a 3 months' period before new crop raws will be available caused another rise in sugar prices. Raw sugar 96° centrifugal was \$7.42 at the middle of October as compared with \$6.77 in September. The high level attained attracted sugar from South America and Europe and resulted in lower prices towards the end of the month. Granulated sugar rose in sympathy with raw from \$9.64 to \$10.17 per cwt. The rubber market was increasingly dull during October. Ribbed Smoked Sheets fell from 29c to 27c and Para Upriver fine from 28c to 24c per pound. Slackening of demand in American and other markets have been accompanied by a piling up of supplies in London, with a consequent slump in prices. The long spell of fine weather brought ample vegetable supplies to the markets consequently potato prices were easier. Quebec grades in car lots fell from \$1.34 to \$1.04 per bag and Ontario potatoes in small lots from \$1.75-\$2.00 to \$1.40-\$1.50 per bag. A combination of scarcity in raw materials and brisk demand to replenish stocks increased the prices of certain canned vegetables. Corn 2's rose from \$1.32½ to \$1.54½ and tomatoes 2½'s from \$1.50 to \$1.79½ per dozen tins.

Plentiful supplies at both the Winnipeg and Toronto markets resulted in lower cattle prices. Choice steers at Toronto fell from \$6.95 to \$6.75 per cwt. The hog market also was easier, thick smooth hogs averaging \$8.78 per cwt, as against \$9.94 in September. Meat prices moved in sympathy with the prices of live stock. Beef hind quarters fell from \$15.20 to \$15.00 per cwt. Bacon dropped from 31c to 28c per pound and mess pork from \$34 to \$32 per barrel. Milk prices showed seasonal rises, the producers' price per gallon at Montreal increasing from 21c to 25c and the wholesale price at Toronto from 35c to 38c-40c per gallon. Butter prices rose 1¼c on the average and egg prices about 2c. Fish prices have tended to increase owing partly to better demand and partly to short present supplies in some lines.

Halibut was 13c as compared with 12c per pound in September.

In the textile group the position of raw cotton showed improvement. Despite the fact that exports of this commodity from the United States are running far behind those of last year and that manufacturers in that country declare their inability to make cloth at marketable prices, upland middling, spot, rose from 29c to 30c per pound at New York. The Hamilton price for raw cotton 1-1-1/16" was 31¾c in October as compared with 30½c in September. Lack of demand and increased shipments from Japan brought raw silk Kansai No. 1 down to \$10.20 per pound, a fall of about 30c per pound. Silk, machine twist, felt the effect of the higher prices for raw material which have prevailed since the earthquake and rose from \$19.75 to \$21.00 per pound. Raw wool again registered a decline. Eastern wool, bright, ¼ blood, declined from 31c to 30c per pound.

The iron and steel market on the whole held its own. Pig iron, basic, dropped \$1 per ton, being \$27 as compared with \$28 in September. The tendency to increasing stocks of raw copper mainly owing to the downward trend in European consumption is reflected in another fall in copper prices, electrolytic being \$15.20 in October as against \$16.15 in September. Manufactured copper moved in sympathy, sheets being \$20.25 as compared with \$21.25 and solid bare copper wire was 18s per pound, a fall of 1¼c. Lead was in a strong position, conditions of supply and demand bringing about a rise from \$6.85 to \$7.10. Lead pipe rose in sympathy from \$12.60 to \$13.05. Lack of demand, both export and import, caused American zinc prices to decline. The Montreal price was \$8 per cwt as compared with \$8.30 in September.

Anthracite coal rose from \$11.82 to \$12.46 per ton. Gasoline, reflecting United States conditions, fell from 25c to 24c per gallon. In the chemical group wood alcohol 97% declined from \$1.00 to 93c per gallon.

sVinegar sold extensively in bottles at higher prices than in bulk.

# PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Index numbers of wholesale prices in Great Britain showed a tendency to rise in September, as they did also in Norway, Denmark, France and Italy. The latest available figures showed prices in Belgium as rising in August, but prices in Holland and Switzerland continued to fall, and in Sweden little change was apparent in September. All wholesale prices index numbers in the

United States rose in September and continued to do so in October. Cost of living and retail prices of foods index numbers have been rising slightly in all countries of Europe and in America, partly owing to seasonal price changes.

### Great Britain

WHOLESALE PRICES. — The *Statist* index number (in continuation of Sauerbeck's figures) showed an advance to 127.8 for September 30, this being 2.2 per cent over the figure for August 31. Both foodstuffs and materials advanced,

the former 2.4 per cent to 122.6, and the latter 2.3 per cent to 131.7. All groups advanced except animal food, the largest advances being one of 14 per cent in the sugar, coffee and tea group due to a sharp advance in the price of sugar, and one of 5.6 per cent in textiles, the latter due to the higher levels of raw cotton, hemp and silk.

The Board of Trade index number of wholesale prices in September showed its first increase since April, with a rise of 2.1 per cent above the August level to 157.9 on the base 1913 = 100. In

			205			486.1			

the course of the four previous months the index had declined to the level 154.6 for August, which was, with the exception of the figure for September, 1922, the lowest point recorded since January, 1920, when the record begins. In the month under review all food groups advanced, the total food index rising 4 per cent. Industrial materials advanced 1.1 per cent, cotton and other textiles advancing, while all the other groups declined.

**COST OF LIVING.** — The Ministry of Labour index number was 175 for the 1st of October, on the base cost of living in July, 1914 = 100. During September foods rose 4 points to 172. There was a rise in retail prices of milk, butter, cheese and eggs, and a decline in prices of potatoes, bacon and flour. On November 1 the index of foods was 173, rents remaining at 147, clothing, at 220, and fuel and light at 180. Sundries fell 5 points to 180 and the cost of liv-

Austria

WHOLESALE PRICES. — The official index number published in *Statistische Nachrichten* showed a rise for September of 8.3 per cent to 17,746 on the base prices in 1914=1. This is the highest level since the month of May, and the first increase shown by the index since its first appearance in March. In foods the

most notable increases were shown by grain, milled products, rice, potatoes and lard, and in fuels, by coal, coke and wood. There were also increases in cotton and cotton yarn and among metals, particularly in tin, zinc and antimony.

COST OF LIVING. — The index number of the cost of living compiled by the Paritätische Kommission showed another increase for the month of October, and reached 11,027 on the base July, 1914 = 1, or 1.7 per cent above the pre-

(d) Following month. (e) Middle of month. (f) 230 commodities, 1890-1899; 272, 1910-1914; from 1915, 271. number (38 commodities) and all converted to base 1913=100. For 1920 and 1921, 76 quotations are included.

vious month. The chief increase in the elements of the budget was one of 38 per cent in rentals, which reached 724 times their pre-wartime cost. Foods increased only one per cent, because although there were decided increases in flour and milled products, fats and colonial products, there were declines in sugar and pulses. Clothing increased in price 5 per cent owing to rising prices of shoes, and heating and lighting showed very little change.

### Belgium

WHOLESALE PRICES. — The index number of the Ministry of Industry and Labour rose 25 points or 5 per cent to

529 for August, on the base 100 in April, 1914. The glass and tobacco groups showed no change, and all other groups showed increases above the previous month's level, the largest being in the metals, fertilizers and chemicals groups, which rose 6 per cent; foods, 7 per cent; fats, 9 per cent; and rubber, 10 per cent.

RETAIL PRICES. — The index number for the Kingdom on the base prices in April, 1914 = 100, rose 3.2 per cent to 453 for September, the highest level reached since December, 1920. The weighted index of 30 foods rose 6.2 per cent to 498 in September.

## Finland

**COST OF LIVING.** — The official index number of the cost of living for 21 towns rose to 1141.4 in August, the base being July, 1914 = 100, an increase of 4.7 per cent over the previous month. Foods rose 8.6 per cent to 1052; lighting and fuel, and tobacco both rose slightly to 1522 and 1285 respectively; and rent, newspapers and taxes all showed no change from the previous month, standing at 971, 1079 and 2526 respectively. Clothing fell 2 points to 1062.

France

RETAIL PRICES. — The official index number of retail prices of 13 commodities at Paris rose to 3649 in September.

IN CANADA AND CERTAIN OTHER COUNTRIES.

except where noted)

on the base 1910 = 1000, or 3.5 per cent above the previous month's level. The quarterly index number for 13 articles in the chief cities of France was 3506 in the third quarter of 1923, as compared with 3387 in the second quarter, an increase of 3.5 per cent.

## Germany

WHOLESALE PRICES. — The official index number of the Federal Statistical Office, owing to its unwieldy nature, has been published since September 25 correct only to hundreds of thousands. The index number for all commodities on the base prices in paper marks in 1913 = 1 reached 23.9 millions for the September average, and by October 9 had

risen to 307.4 millions. Thus the index number for September, if printed in the accompanying table, where the base is given as 100 in 1913, would be 2,390,000,000. The index number in gold marks (calculated from the exchange value of the American dollar on the same date) showed much variation in the levels of the various groups, for the September average the index in gold marks (1913 = 100) for grain and potatoes being 51.3, and for coal and iron, 170.4. The gold index of all commodities for September was 101.7, and at October 9 was 107.6.

### South Africa

**WHOLESALE PRICES.** — The index number of the Bureau of Census and Statistics which is published every three months, was 1395 for July last, as compared with 1420 for April, the base being 1000 in 1910. For the three months, declines were shown in grains, building materials, chemicals, fuel and light, and soft goods, and advances in metals, jute, leather, etc., dairy produce, groceries, meat, and the miscellaneous group.

### India

**COST OF LIVING.** — The official index number compiled by the Bombay Labour

(a) Figure for previous month. (b) Average for year. (c) Index published quarterly. (d) 15th of capital towns. (g) 15th of month. (h) Four chief cities. (i) January 1913-December 1920, 22 foods.

Office showed no change for September from the August level. All foods showed no change, although the prices of rice and jowari rose slightly. A slight rise in the prices of potatoes and onions was counterbalanced by a fall in refined sugar. Fuel and lighting declined 2.4 per cent, and there was a slight rise in the clothing index. House rent showed no change.

### United States

**WHOLESALE PRICES.** — The index number of the Bureau of Labour Statistics showed a decided upturn in prices in September, rising 4 points or 2.7 per cent, to 154. The group of cloths

and clothing showed the greatest advance for the month, one of more than 4.5 per cent, due to advances in raw silk, print cloths and cotton yarns. Farm products rose 3.5 per cent owing to advances in corn, oats, rye, wheat, hogs, cotton, eggs and hay. Foods also increased 3.5 per cent, and chemicals and drugs and miscellaneous commodities showed increases. Slight decreases were shown in building materials, fuel and lighting, and in metals and metal products. House furnishing goods showed no change.

The index number of the Federal Reserve Board increased 4 points in September, thus returning almost to the

month up to end of 1920; beginning of month thereafter. (e) Beginning of month. (f) Base is average for six. (k) Cost of food budget.

level of June last. All groups showed increases, the most striking being in raw materials and consumers' goods, caused by rises in farm and food products. Goods imported rose for the first time since April, owing partly to increased costs of raw silk and sugar.

*Bradstreet's* index number of wholesale prices was \$13.1378, at November 1, an increase of 0.3 per cent over the level at October 1. Eight of thirteen groups declined and five advanced. The chief gains were in provisions and textiles, while breadstuffs, live stock and oils showed slight advances.

*Dun's* index number for October 1 showed its third successive rise, reaching \$191.844, as compared with \$190.827 for September 1, an increase of 0.5 per cent. Four groups, namely, meat, clothing, metals and the miscellaneous group, were slightly lower for the month, while advances were shown in breadstuffs, dairy and garden products and "other food". The rise in dairy and garden products, which amounted to 8 per cent was due chiefly to higher prices of butter and eggs.

**COST OF LIVING.** — The index number of the Bureau of Labour Statistics for September showed an increase in the cost of living over the June level of 1.4 per cent. The per cent of increase from

1913 (average) to September was as follows: food, 49.3; clothing, 76.5; housing, 64.4; fuel and light, 81.3; furniture, 122.4; miscellaneous, 101.1; all, 72.1. The price of electricity showed a percentage decrease of 5.1 per cent, as compared with the price in December, 1914. Every element in the budget advanced during the period under review.

The retail food index of the Bureau of Labour Statistics showed an increase of 2 per cent in the retail cost of food in September, as compared with August, the index number reaching 149, the highest level since December, 1921. During the month, the chief increases were: fresh eggs, 17 per cent; pork chops, 14 per cent; butter, 6 per cent; lard, 5 per cent. The chief decreases were: potatoes, 8 per cent; onions, 5 per cent; cabbage, 4 per cent.

The index number of the Special Commission on the Necessaries of Life for Massachusetts showed a slight increase in the cost of living in September, the index reaching 160.3, an increase of 0.5 per cent above the previous month's level. Foods increased in price 1 per cent; clothing, 0.7 per cent; and fuel and light 0.4 per cent. The other elements in the budget showed no change for the month under review.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1923

INFORMATION received by the Department for the third quarter of 1923 shows 353 fatalities in the industries and trades of Canada during that period as compared with 350 in the previous quarter and 338 in the corresponding quarter of last year. Figures for the first nine months of 1923 as compared with the corresponding period of 1922 show an increase of 225 in the number of fatalities, as indicated in the following table:

	1922	1923
January .....	54	96
February .....	58	122
March .....	65	89
April .....	96	107
May .....	81	127
June .....	94	116
July .....	112	124
August .....	117	134
September .....	109	95
Totals.....	*786	*1,010

\*Revised figures. See accompanying supplement, also supplementary list of fatalities in 1922 in the issue of the LABOUR GAZETTE for May, 1923.

During the quarter under review there were 103 fatalities in the transportation and public utilities group, 41 of which occurred on the steam railways and 31 in the water transportation group. The chief causes of the deaths in the steam railway service were collisions, being struck by engines, run over and crushed by or between cars, and stepping from engines in front of a moving train or backward in front of an engine on another track. In the water transportation group, falling overboard or into holds of vessels was the main cause of the

fatalities. In the public utilities group nine deaths were due to electricity. Seven additional deaths were also reported in the other groups as the effect of electricity. In the construction group, in which there were 59 fatalities reported, falls accounted for the greatest number of deaths, and among other causes were the caving in of earth, being struck by material precipitated from blasts, by buckets and by falling objects. In the manufacturing group, 45 deaths were reported, of which 6 were caused by elevators and other hoisting apparatus, 7 by belts, shaftings, etc., and 10 by burns and scalds as the result of exploding materials, flames, collapse of furnace bottom, a boiler explosion and a fall into a steam vat; two deaths resulted from infection in this group. In the agricultural group, where 40 fatalities were reported, the chief causes were falls from loads, horses bolting and kicking, and being gored by bulls; one death was due to infection and one to being caught in the belt of a machine. In the mining, non-ferrous smelting and quarrying group there were 34 deaths reported, falls of rock, etc., resulting in the greatest number of these deaths. Three fatalities at the Springhill collieries in Nova Scotia were due to "bumps" which are explained as caused by pressure of the earth above and which come without warning and with the force of an explosion; one death in the mining group was due to asphyxiation, one to being burned in a coal dust explosion and two to electricity. Rolling logs, trees rebounding after being hit by falling trees, and drownings, accounted for the majority of the 29 deaths in the logging industry.

The following table has been prepared from information received from all sources available, but it does not necessarily include all the fatal industrial accidents that may have occurred.

## FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1923.

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Farmer .....	Brantford, Ont.....	July	8	Gored by a bull.
Farmer .....	Corbyville, Ont.....	"	9	Thrown from load when horses bolted.
Farmer .....	Brandon, Man.....	"	9	Struck by timber blown off barn in windstorm.
Farmer .....	Near Estevan, Sask.....	"	15	Drowned—Slipped from horse when crossing creek.
Farmer .....	Goderich, Ont.....	"	15	Fell from load of hay.
Farmer .....	Nakusp, B.C.....	"	29	Thrown from buggy when horses bolted.
Farm hand.....	Sandwich South Town- ship, Ont.....	"	18	Gored by a bull.
Farmer .....	Glenboro, Man.....	"	18	Buried in well when its walls caved in.
Farm hand.....	Stittsville, Ont.....	"	20	Kicked by a horse.
Farmer .....	Owen Sound, Ont.....	"	20	Fell from load. Bolt holding whip- ple tree dropped and horses plun- ged forward.
Farmer .....	Mitchell, Ont.....	"	21	Crushed by horse which fell while hoisting hay.
Farmer .....	Belmont, Ont.....	"	21	Fell from load.
Farmer .....	Denfield, Ont.....	"	28	Fell between wagon and horses when climbing on to load.
Farmer .....	Campbellford, Ont.....	"	29	Fell from barn.
Farm hand.....	Tilbury East township, Ont.....	"	30	Fell from mow ladder.
Farmer .....	Carlyle, Sask.....	"	30	Run over and cut by binder when horses bolted.
Farmer .....	Windthorst, Sask.....	Aug.	10	Fell off derrick when support broke.
Farmer .....	Rawdon township, Ont.....	"	13	Fell from load when it jolted.
Farm hand.....	Near Mossbank, Sask.....	"	18	Found dead behind binder.
Farmer .....	Newark, Ont.....	"	20	Removed thistle from thumb with jack knife—blood poisoning.
Farmer .....	Beaumont, Que.....	"	23	Fell in front of mowing machine.
Farm hand.....	Alameda, Sask.....	"	24	Ruptured bloodvessel while stook- ing grain.
Farmer .....	Near Scollard, Alta.....	"	28	Drowned while fording river.
Farm hand.....	Souris, Man.....	"	28	Crushed beneath wagon.
Farmer .....	Near Tecumseh, Ont.....	"	28	Fell from wagon and kicked by horse.
Farmer and wife (2).....	Ridgeville, Man.....	"	30	Struck by lightning while stacking grain.
Farmer .....	Rockton, Ont.....	Sept.	5	Gored by a bull.
Farmer .....	Bridgeford, Sask.....	"	9	Kicked by a horse.
Farm labourer.....	Outlook, Sask.....	"	12	Thrown to road when team ran away.
Farmer .....	Kincaid, Sask.....	"	15	Thrown from wagon when horses bolted.
Farmer .....	Meyronne, Sask.....	"	15	Horse ran away.
Farm hand.....	Embro, Ont.....	"	17	Fell from wagon when team bolted.
Engineer .....	Lebret, Sask.....	"	17	Fell between drive wheel and fender of engine.
Farmer .....	Young, Sask.....	"	21	Struck by hay rack which blew over in strong wind.
Farmer's wife.....	Near Yorkton, Sask.....	"	21	Thrown under knives of binder when team bolted.
Farmer .....	Wardsville, Ont.....	"	24	Shot himself while hunting rat.
Farmer .....	Rockbuck, Ont.....	"	25	Caught in belt of corn cutting ma- chine.
Labourer with threshing crew.....	Killam, Alta.....	"	26	Run over by threshing engine.
Farmer .....	Harriston, Ont.....	"	30	Kicked by runaway horses.
LOGGING—				
Woodsmen .....	Kinmount, Ont.....	July	4	Drowned.
Logger .....	Orford Bay, B.C.....	"	5	Crushed by rolling log.
Labourer .....	Clyde Forks, Ont.....	"	5	Plank dropped on legs.
Logger .....	Seamours, B.C.....	"	6	Struck by falling tree.
Loggers (2).....	Painbridge, B.C.....	"	9	Car broke from engine on incline.
Logger .....	Hotham Sound, B.C.....	"	12	Struck by tree which rebounded af- ter being hit by falling tree.
Sawyer .....	Penny, B.C.....	"	14	Struck by carriage and thrown on saw.
Logger .....	Campbell River, B.C.....	"	14	Crushed under rolling log.
Driver .....	River Valley, Ont.....	"	23	Drowned.
Loader .....	Vahk, B.C.....	"	20	Struck by tie and fell from gang plank.
Logger .....	Port Alberni, B.C.....	"	24	Struck by log which swung around stump.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1923 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—Continued:				
Brakeman	Near Fernie, B.C.	Aug. 3	.....	Fell when alighting from car, and run over.
Woodsmen	Kenora, Ont.	" 4	.....	Struck by pike pole.
Swamper	Sault Ste-Marie, Ont.	" 8	.....	Struck by tree.
Chokerman	Beresford Arm, B.C.	" 9	.....	Struck by tree which was broken off by swinging log.
Logger	Lynn Creek, B.C.	" 13	39	Crushed by log which upended while being hauled in by donkey engine.
Logger	North Vancouver, B.C.	" 13	.....	Crushed by tree which was uprooted by rolling log.
Logger	Bull River, B.C.	" 15	41	Struck by tree which rebounded after being hit by falling tree.
Flunkey	Deep Cove, B.C.	" 16	21	Fell off scow-drowned.
Labourer	McDougall's Mills, Ont.	" 19	21	Drowned.
Foreman	Shere, B.C.	" 17	35	Drowned. Fell into river when log jam lifted.
Foreman	Ocean Falls, B.C.	" 21	33	Fell and was crushed between timbers.
River driver	Farm Point, Que.	" 19	20	Drowned. Boat capsized while clearing log jam.
Signalman	Port Alice, B.C.	" 20	18	Struck by tree which was pulled sideways while yarding logs.
Compassman	Cowichan Lake, B.C.	" 23	19	Struck by falling logs. Was sealing logs on car when train started.
Teamster	Buccancer Bay, B.C.	Sept. 3	22	Crushed between skids one of which rolled while hauling logs with team.
Loader	Headquarters, B.C.	" 7	.....	Struck by falling log.
Workman at pole camp	Blind Bay, B.C.	" 19	.....	Drowned when gas boat took fire.
FISHING AND TRAPPING—				
Fisherman	Port Essington, B.C.	July 8	16	Drowned. Fell while trying to board boat from wharf.
Fisherman	Flat Ledge Shoals, N.S.	" 10	.....	Drowned while rescuing boat adrift when engine stopped.
Fishermen (2)	Shelburne, N.S.	" 10	.....	Drowned when schooner capsized.
Fisherman	Egmont Bay, P.E.I.	Aug. 16	34	Dragged overboard when clothing caught in anchor.
MINING, NON-FERROUS SMELTING AND QUARRYING— <i>Metalliferous Mining:</i>				
Miners (2)	Half Moon Bay, B.C.	July 4	.....	Suffocated.
Miner	Timmins, Ont.	" 17	46	Struck by falling ore while using sealing bar.
Mucker	Kinberley, B.C.	" 18	30	Electrocuted. Head came in contact with trolleywire.
Shift foreman	Timmins, Ont.	" 24	32	Smothered by slide of rock.
Machine runner	Timmins, Ont.	" 25	.....	Fell in shaft.
Miner	Timmins, Ont.	Aug. 4	39	Struck by falling rock.
Mucker	Anyox, B.C.	" 20	51	Believed to have fallen from steps into slope.
Miner	Britannia Beach, B.C.	Sept. 5	.....	Slipped and fell through grating.
Motorman at smelter	Trail, B.C.	" 10	30	Trestle of elevated tram gave way.
COAL MINING—				
Bratticeman	Blairmore, Alta.	July 7	50	Fell into chute from manway.
Miner	Hillcrest, Alta.	" 10	33	Struck by falling roof.
Timber packer	Brule, Alta.	" 14	36	Struck by fall of rock while in timber chute.
Miner	Springhill, N.S.	" 18	34	Thrown some distance when "bump" occurred in mine level.
Miner	Nanaimo, B.C.	" 18	36	Struck by falling rock.
Miner	Coleman, Alta.	" 20	39	Struck by coal from roof.
Labourer	Cumberland, B.C.	" 20	54	Struck by empty trip while repairing rollers on main slope.
Fireboss	Coleman, Alta.	" 31	38	Suffocated by gas.
Pumpman	Carbon, Alta.	" 30	69	Deraiment of car when horses took freight when hauling dirt from mine.
Miner	Glace Bay, N.S.	Aug. 17	.....	Struck by fall of stone.
Slopeman	Cumberland, B.C.	" 20	over 21	Struck by trip.
Miner	Stellarton, N.S.	" 23	.....	Struck by fall of coal.
Miner	Coleman, Alta.	Sept. 4	.....	Crushed by slide of rock.
Miners (2)	Nanaimo, B.C.	" 4	46 and 48	Crushed by fall of roof coal.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1923 (*Continued*)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>COAL MINING—Continued:</b>				
Miner .....	Nanaimo, B.C.....	"	7 36	Drowned. While working on pontoon line rubber sleeve came off pipe causing fall into water.
Miners (2).....	Spinghill, N.S.....	"	41 and 42	Heavy "bump" caused fall of stone.
<i>Non-metallic mineral mining and quarrying:</i>				
Employee at gravel pit.....	Trenton, Ont.....	July 12	.....	Cave in at pit.
Quarryman .....	Montreal, Que.....	Aug. 4	24	Struck by rocks thrown from blast while drilling.
Pitman .....	Thetford Mines, Que....	Sept. 1	23	Crushed by fall of rock in pit.
<i>Clay products and structural materials, n. e. s.</i>				
Employee of cement plant....	Port Colborne, Ont.....	July 8	47	Burned by coal dust explosion.
Employee of crushed stone works .....	Dundas, Ont.....	" 21	20	Slipped and was struck by car beam while removing brake.
Employee of brick works....	Inglewood, Ont.....	Sept. 7	23	Electrocuted; Touched rod of roof truss charged with electricity.
<b>MANUFACTURING—</b>				
<i>Vegetable foods, drink and tobacco:</i>				
Employee at flour mill.....	Plessisville, Que.....	July 17	39	Struck by shafting.
Elevator operator at biscuit factory .....	London, Ont.....	Aug. 1	62	Crushed between gate and floor of elevator.
Labourer at mill.....	Port Loring, Ont.....	" 21	14	Caught in shafting.
Foreman with beverage company .....	Chatham, Ont.....	Sept. 9	26	Crushed under truck.
Employee at sugar refinery....	Wallaceburg, Ont.....	" 20	60	Caught between clam and end of car.
<i>Animal edible products:</i>				
Butcher in abattoir.....	Toronto, Ont.....	July 4	.....	Stabbed in groin.
Milk salesman.....	Vancouver, B.C.....	Aug. 11	27	Thrown down while endeavouring to stop horse.
Driver for dairy.....	Ottawa, Ont.....	" 31	46	Struck by auto when crossing street.
Employee of butchers.....	Montreal, Que.....	Sept. 18	58	Crushed by a freight elevator.
<i>Textiles:</i>				
Employee .....	Montreal, Que.....	Aug. 31	16	Crushed by descending elevator.
Employee at knitting factory.	Galt, Ont.....	Sept. 18	19	Burned. When spark from machine, caused by a nail ignited wool.
<i>Leather, fur and products:</i>				
Workman at shoe factory....	Cobourg, Ont.....	July 5	53	Fell on knee infection.
Superintendent at tannery....	York Co., N.B.....	Aug. 20	58	Struck by belt.
<i>Pulp, paper and paper goods:</i>				
Employee of pulp mill.....	Bathurst, N.B.....	July 26	.....	Severe burns (no further particulars).
Employee of pulp mill.....	La Tuque, Que.....	" 6	.....	Fell from boat at rapids, drowned.
Employee at pulp mill.....	Kenogami, Que.....	Aug. 9	48	Caught in rolls.
Employee at paper mill.....	Fort William, Ont.....	Sept. 9	17	Caught in belt at mill.
<i>Wood products:</i>				
Elevator operator at furniture factory .....	Newmarket, Ont.....	July 30	74	Caught in elevator.
<i>Saw and planing mills:</i>				
Labourer .....	Ottawa, Ont.....	July 19	58	Pulled on to saw when picaroon caught on carriage.
Employee .....	Woodstock, Ont.....	Aug. 3	22	Scalded. Fell into steam vat while evading car on driveway.
Mill worker.....	Sarita, B.C.....	" 18	34	Wood being used to clean sawdust from saw caught and struck workman.
Foreman .....	Cheneville, Que.....	" 21	42	Burned when boiler exploded.
Flier .....	Cutler, Ont.....	Sept. 20	27	Burned in fire which destroyed building.

## FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1923 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Iron, steel and products:</i>				
Car repairer .....	Hagersville, Ont.....	July 9	.....	Crushed by cars.
Car repairer .....	Calder, Sask.....	" 17	.....	Crushed by car which started unawares.
Car repairer .....	Edmonton, Alta.....	" 17	29	Crushed between drawbars.
Employee at steel works.....	Longueuil, Que.....	" 12	43	Struck by rail being lifted by a crane.
Labourer at machine factory.	Chatham, Ont.....	" 26	.....	Drowned.
Car repairer .....	Kamloops, B.C.....	" 31	59	Crushed between cars.
Labourer at oven factory....	Toronto, Ont.....	Aug. 9	30	Cut lip; infection.
Employee at steel plant.....	Hamilton, Ont.....	" 23	38	Struck by cage while top-filling at furnace.
Employee at stove factory....	Penetang, Ont.....	Sept. 1	40	Electrocuted. Touched charged metal while switching off current.
Car repairer.....	Thetford Mines, Que....	" 7	60	Crushed under car which started unawares.
Millwright at foundry.....	Toronto, Ont.....	" 10	62	Crushed by truck.
Handyman at iron factory....	Welland, Ont.....	" 14	42	Clothing caught fire while lighting coke furnace.
Machinist's helper.....	Britannia Beach, B.C....	" 17	23	Caught in belt and thrown against railing in mill.
Machinist apprentice.....	Winnipeg, Man.....	" 18	17	Collision of motorcycle with automobile while delivering.
Machinist at steel plant.....	Sydney, N.S.....	" 20	28	Crushed in revolving gears when machinery started unawares.
Furnace tenders at abrasives factory (3).....	Hamilton, Ont.....	" 22	33 28 30	Burned when bottom of metal furnace collapsed.
Electrician .....	Hamilton, Ont.....	" 29	57	Crushed by transformer tank while cleaning away moulding sand.
<i>Chemical and allied products:</i>				
Fireman at oil refinery.....	Sarnia, Ont.....	July 5	.....	Explosion of still.
Teamster at oil refinery.....	Calgary, Alta.....	Aug. 14	.....	Jolted under wagon when wheels slipped into ditch.
Gauger .....	Long Beach, B.C.....	" 20	.....	Burned when spraying oil ignited in pipe line fire.
CONSTRUCTION—				
<i>Buildings and structures:</i>				
Foreman .....	Penetang, Ont.....	July 10	.....	Fell on block.
Labourer .....	Kingsford, Ont.....	" 17	.....	Heat prostration.
Labourer at grain elevator..	Port Arthur, Ont.....	" 20	.....	Hit by plank.
Apprentice plumber.....	Quebec, Que.....	" 23	20	Electrocuted. Touched furnace with free hand while bringing forward electric light.
Painter .....	Chicoutimi, Que.....	" 20	40	Fell from scaffold.
Contractor .....	Chicoutimi, Que.....	Aug. 14	52 46	Fell from roof of cathedral.
Labourers (2).....	Orono, Ont.....	" 15	25	Collapse of cement structure.
Carpenter .....	Jasper, Alta.....	" 13	47	Kicked by a horse.
Employee at steel work.....	Montreal, Que.....	" 14	34	Fell while placing beam.
Bricklayer .....	Calgary, Alta.....	" 17	39	Fell from scaffold.
Painter .....	Kilgard, B.C.....	" 21	35	Fell while painting beams.
Erector for steel company....	Toronto, Ont.....	" 28	.....	Fell.
Rivetter .....	Toronto, Ont.....	" 28	.....	Lost footing and fell while walking on lashed plank.
Pipe fitter.....	Kinberley, B.C.....	" 24	34	Fell from skip car which was being lowered by hoist.
Carpenter .....	Levis, Que.....	" 31	21	over
Labourer .....	Port Arthur, Ont.....	Sept. 7	32	Struck by falling stone.
Roofer .....	St. Hyacinthe, Que.....	" 17	58	Struck by falling timber.
Labourer .....	Brandon, Man.....	" 15	51	Slipped on wet roof and fell.
Painter .....	Hull, Que.....	" 21	.....	Fell while installing asbestos roofing.
Carpenter .....	Blairmore, Alta.....	" 22	43	Fell from a roof.
				Fell from roof beam.
<i>Railway construction:</i>				
Labourer .....	Sudbury, Ont.....	July 9	33	Crushed by dipper when rail under steam shovel turned.
Employee .....	St. Hilaire, N.B.....	" 10	18	Fell off trestle.
Labourer .....	Trenton, Ont.....	" 11	60	Bank gave way in ballast pit.
Steam shovel watchman.....	St. Anne, Man.....	" 16	24	Train struck hand car.
Employee .....	St. John, N.B.....	" 18	.....	Fell from car.
Employee .....	Ville Marie, Que.....	" 18	.....	Crushed foot under shovel train.
Labourer .....	Streetsville Jct., Ont....	" 31	30	Shock after amputation.
				Run over.

## FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1923 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>CONSTRUCTION—</b>				
<i>Railway Construction:</i>				
<i>Continued:</i>				
Employee .....	St. Thomas, Ont.....	Aug. 15	.....	Fell off bridge.
Labourer .....	Walton, N.S. ....	" 15	.....	Struck by moving cars.
Bridge painter .....	Shawinigan, Falls, Que.	" 20	65	Fell. Defect in scaffolding.
Labourer .....	Connaught Tunnel, B.C.	" 21	18	Struck by train and run over.
Labourer .....	North Parry, Ont.....	" 23	.....	Fell when getting on moving train.
Bridge painter .....	Montreal, Que.....	Sept. 5	20	Electrocuted.
Labourer .....	Tiffin, Ont.....	" 22	.....	Crushed by iron girder.
Watchman .....	Burlington, Ont.....	" 25	76	Struck by automobile.
<i>Miscellaneous construction:</i>				
Well driller .....	Superb, Sask.....	July 3	22	Asphyxiated.
Labourer .....	Toronto, Ont.....	" 9	30	Fell from bridge.
Highway engineer.....	Cascumpee, P.E.I.....	" 11	24	Automobile swerved and went over bridge.
Employee on road work.....	West Bathurst, N.B.....	" 10	.....	Truck hit wagon, swerved and went through railing of bridge.
Bridgeman .....	Revelstoke, B.C.....	" 15	24	Drowned. Thrown out of aerial car when trolley slipped off cable.
Grade contractor.....	Port Coquitlam, B.C....	" 9	40	Struck by material from blast.
Foreman .....	Welland, Ont.....	" 12	20	Explosion.
Labourer .....	Welland, Ont.....	" 27	48	Crushed between platform and gear of car.
Highway employee.....	Walkerton, Ont.....	" 28	22	Struck by steel scraper.
Bridgeman .....	Dona, Ont.....	Aug. 3	30	Fell off scaffold.
Wrecker at dam.....	Montreal, Que.....	" 3	22	Collapse of masonry.
Sand hogger.....	Revelstoke, B.C.....	" 9	24	Struck by bucket while pouring concrete into cylinder-drowned.
Workman .....	Chicoutimi, Que.....	" 10	.....	Struck by stone from blast.
Workman .....	Piebrac, Que.....	" 10	41	Struck by stone from blast.
Highway employee.....	Commanda, Ont.....	" 18	.....	Kicked by horse.
Bridgeman .....	Revelstoke, B.C.....	" 20	39	Fell off bridge-drowned.
Sewer excavator.....	Englehart, Ont.....	" 21	.....	Crushed by cave-in of clay.
Elevator company's employee	Toronto, Ont.....	" 23	.....	Struck by elevator.
Power commission labourer..	Sheet Harbour, N.S.....	Sept. 4	.....	Struck by falling tie.
Municipal employee.....	Marmora, Ont.....	" 11	76	Crushed when earth caved in.
Municipal employee.....	Owen Sound, Ont.....	" 8	45)	Fell from ladder.
Labourers (2).....	Dundas, Ont.....	" 26	24)	Thrown from truck.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Steam railways:</i>				
Pumpman .....	Granum, Alta.....	July 4	.....	Clothing caught in clutch of engine.
Repairman .....	Hagersville, Ont.....	" 9	.....	Crushed between car wheels.
Watchman .....	Spuzzum, B.C.....	" 9	27	Train struck velocipede.
Freight car conductor.....	Riviere a Pierre, Que....	" 16	32	Crushed between cars while coupling.
			over	
Railwayman .....	Edmonton, Alta.....	" 17	21	Crushed between railway box cars.
Employee .....	Collins Bay, Ont.....	" 18	39	Crushed between couplers.
Sectionman .....	Vancouver, B.C.....	" 28	59	Struck by train.
Sectionman .....	Hammond, B.C.....	" 28	35	Struck by train.
			42)	
Trainmen .....	Picard, Que.....	" 28	and)	Head-on collision.
			36)	
Employee .....	Eldersley, Sask.....	Aug. 1	.....	Speeder collision.
Brakeman .....	Shuswap Sd., B.C.....	" 4	30	Fell off moving train.
Labourer .....	White River, Ont.....	" 5	40	Fell from car and run over.
Brakeman .....	Reid Bay, B.C.....	" 6	47	Fell from load when train collided with gasoline speeder.
Engineer .....	Kasaboice, Ont.....	" 8	40	Deraiment. Fell on boulders when jumping from train.
Switchman .....	Winnipeg, Man.....	" 10	56	Run over.
Conductor .....	Hull, Que.....	" 12	.....	Crushed between cars.
Car checker.....	St. Thomas, Ont.....	" 12	22	Struck by train. Stepped backwards in front of light engine.
Trackman .....	Todmorden, Ont.....	" 12	51	Engine struck speeder.
Brakeman .....	Steilton, Ont.....	" 13	35	Fell off car and run over.
Brakeman .....	Paris Jct., Ont.....	" 17	30	Stepped off engine in front moving train.
Brakeman .....	Fort William, Ont.....	" 20	.....	Slipped and fell in front of engine.
Trainman .....	Beck, Ont.....	" 20	33	Found underneath drivers of engine.
Fuelman .....	Moncton, N.B.....	" 22	44	Run over. Stepped off switch engine in front of another engine.
Trainman .....	Tillsonburg, Ont.....	" 25	25	Fell while attempting to board train.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1923 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality	
TRANSPORTATION AND PUBLIC UTILITIES— <i>St. Lawrence Railway—Continued</i>					
Curve oiler.....	Longueuil, Que.....	"	26	59	Derailment.
Sectionman .....	Smith's Falls, Ont.....	"	26	54	Struck by engine.
Sectionman .....	Montreal, Que.....	"	27	40	Run over.
Trainmen (3).....	Englehart, Ont.....	"	28	.....	Collision alleged to failure of operator to deliver proper orders.
Labourer .....	Okanagan Landing, B.C.	Sept.	7	46	Slipped into icecrusher while throwing pulley belt from engine to idler.
Brakeman .....	Arnold, B.C.....	"	15	.....	Run over by train.
Brakeman .....	Thornloe, Ont.....	"	20	22	Struck by train when stepping across track after signalling.
Conductor .....	Englehart, Ont.....	"	21	40	Fell off train.
Conductor .....	Dunvegan Yard, Alta....	"	21	40	Slipped off car of logs.
Brakeman .....	Mallorytown, Ont.....	"	23	25	Struck by train.
Brakeman .....	Delisle, Sask.....	Sept.	24	34	Crushed between draws of engine and cars.
Carpenter .....	Wetaskiwin Sd., Alta....	"	29	46	Fell off train.
<i>Electric railways:</i>					
Lineman .....	St. James, Man.....	Sept.	11	30	Electrocuted while cutting wires.
Lineman .....	Bayview, Ont.....	"	20	22	Struck by buffer beam of engine.
Lineman .....	Hamilton, Ont.....	"	21	20	Struck by train.
<i>Water transportation:</i>					
Shipper .....	Montreal, Que.....	July	1	19	Fell into hold of freighter.
Captain .....	Diligent River, N.S.....	"	4	50	Fell overboard; drowned.
Sailor .....	Canso, N.S.....	"	10	17	Fell overboard; drowned.
Longshoreman .....	Montague, P.E.I.....	"	12	16	Fell overboard trying to save cargo, drowned.
Sailor .....	Toronto, Ont.....	"	16	.....	Drowned.
Kitchen man on steamer.....	Brockville, Ont.....	"	16	20	Knocked through open gangway when automobile rolled forward as ship listed.
Seaman .....	Lake Ontario, Ont.....	Aug.	3	.....	Drowned.
Deckhand .....	Port Colborne, Ont.....	"	7	22	Fell into hold.
Fireman .....	Port Arthur, Ont.....	"	8	21	Fell into hold of steamer.
Longshoreman .....	St. John, N.B.....	"	14	.....	Struck by sling of sugar.
Workman .....	Courtney Bay, N.B.....	"	14	26	Fell overboard from dredging scow.
Deckhand .....	North Sydney, N.S.....	"	22	.....	Swept overboard by large wave.
Workman .....	Lunenburg, N.S.....	"	23	17	Fell into hold of steamer.
Longshoreman .....	Montreal, Que.....	Sept.	6	35	Fell into hold of steamer.
Seaman .....	Vancouver, B.C.....	"	7	.....	Fell into hold of steamer.
Dredge employee.....	Nanaimo Harbour, B.C..	"	7	36	Drowned; fell overboard when pipe line burst.
Employee on steamer.....	Vancouver, B.C.....	"	10	.....	Fell down hatchway while removing cover.
Watchman .....	Buffalo, N.Y.....	"	11	18	Fell into hold.
Employees of tugboat (5)....	Pollier Pass, B.C.....	"	23	.....	Drowned when tug sank.
Employee on oil tanker.....	Atlantic Ocean.....	"	24	33	Fell into ship's hold.
Mate on steamer.....	Near Cherry Island St. Lawrence River.....	"	25	.....	Fell overboard-drowned.
Sailor .....	Fort William, Ont.....	"	22	23	Fell into ship's hold.
Deckhand .....	Cornwall Canal, Ont.....	"	30	.....	Crushed between sides of freighter and stone coping.
Canal helper.....	Welland Canal, Ont.....	"	24	35	Drowned when trying to jump ashore from boat.
Sailors with wrecking company (2).....	Sarnia, Ont.....	"	27	30	Drowned.
Sailor .....	Dickson's Landing, Ont..	"	30	15	Crushed by boat.
<i>Air transportation:</i>					
Aviators (2).....	Roberval, Que.....	July	11	.....	Hydroplane crash.
Aviators (3).....	Roberval, Que.....	Sept.	26	.....	Hydroplane crash.
<i>Storage and local transportation:</i>					
Carter .....	West Toronto, Ont.....	July	1	51	Head struck against beam when leaving shed with load.
Carter .....	Montreal, Que.....	"	3	30	While on pole of wagon horses bolted.
Employee of transportation company .....	Toronto, Ont.....	"	7	35	Head crushed (No further particulars).
Carrier .....	Gloucester Co., N.B.....	"	10	32	Fell over bridge into water.

## FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1923 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Storage and local transportation—Continued</i>				
Carter .....	Quebec, Que.....	" 18 .....		Pinned against wall when horses backed.
Labourer at storage plant...	Brockville, Ont.....	" 19 .....		Caught in elevator.
Teamster .....	Calgary, Alta.....	Aug. 14 57		Fell and run over by wagon.
Carter .....	Toronto, Ont.....	" 18 75		Crushed by horse.
Driver .....	St. John, N.B.....	Sept. 17 .....		Thrown from wagon when team bolted.
<i>Telegraphs and telephones:</i>				
Telephone lineman.....	Rossland, B.C.....	Aug. 21 37		Fell with pole which gave way.
<i>Public utilities, n.e.s.</i>				
Electrician .....	Vancouver, B.C.....	July 1 30		Electrocuted, touched live wire when cleaning insulator.
Lineman .....	St. Thomas, Ont.....	" 19 35		Explosion.
Lineman .....	Galt, Ont.....	" 28 21		Electrocuted while stringing wires.
Inspector and welder (2)...	Edmonton, Alta.....	Aug. 9 58		Pipe cap blew off in air compressor test.
Employee at power station...	Thetford Mines, Que.....	" 15 .....		Electrocuted.
Lineman .....	Little Britain, Ont.....	" 18 21		Electrocuted while stringing wires.
Electrician .....	Winnipeg, Man.....	" 18 28		Electric shock caused fall. While drilling, chain slipped and touched wire.
Lineman .....	Toronto, Ont.....	" 22 42		Fell off pole.
Electrician .....	Sudbury, Ont.....	" 23 .....		Slight shock caused fall from pole.
Lineman .....	Dixie, Ont.....	" 23 25		Fell off pole, burned.
Hydro carpenter.....	Niagara Falls, Ont.....	" 24 18		Stumbled over clothesline which had become electrified.
Lineman .....	London, Ont.....	" 27 30		Electrocuted while stringing wires.
TRADE—				
<i>Warehousing:</i>				
Employee .....	Saskatoon, Sask.....	Sept. 5 45		Struck by counterweight of elevator which fell into pit.
<i>Retail:</i>				
Travelling salesman.....	Camrose, Alta.....	July 17 41		Automobile overturned and fell into river.
Ice men (2).....	New Glasgow, N.S.....	" 20 .....		Train struck motor truck at crossing.
Employee at ice plant.....	Hamilton, Ont.....	Aug. 17 28		Crushed between wagon and barn.
SERVICE—				
<i>Public and municipal:</i>				
Fire ranger.....	Fire River, Ont.....	July 22 .....		Struck by engine.
Labourer .....	Ramora, Ont.....	" 30 22		Struck by lightning.
Water boy.....	Huntsville, Ont.....	Aug. 11 21		Kicked by a horse.
Employee of harbour commis- sion .....	Montreal, Que.....	" 13 28		Electrocuted. Touched live wire while erecting line.
Foreman with gas company..	Leamington, Ont.....	" 25 51		Auto overturned.
<i>Recreational:</i>				
Jockey .....	Vancouver, B.C.....	Aug. 28 .....		Horse fell in race.
<i>Personal:</i>				
Helper in automobile restau- rant .....	Ste. Anne Road, near Montreal, Que.....	July 29 .....		Burned when gasoline stove ex- ploded.
Domestic .....	Chatham, Ont.....	Aug. 11 13		Burned when pouring coal oil on kitchen fire.
Housekeeper .....	Winnipeg, Man.....	" 14 54		Clothing took fire when parowax being melted on oil stove ignited.
Domestics (5).....	Lake of Bays, Ont.....	" 19 .....		Burned in fire at hotel.
Window cleaner.....	Toronto, Ont.....	" 25 .....		Fell when window came out of frame.
Hotel fireman.....	St. John, N.B.....	" 26 .....		Burned by escaping steam when boiler tube blew out.
Window cleaner.....	Winnipeg, Man.....	Sept. 4 29		Fell from window sill.
Domestic .....	Hanley, Sask.....	" 30 18		Can exploded while pouring oil on

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1923 (*Continued*)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Miscellaneous:</i>				fire.
Boiler washer.....	Coleman, Alta.....	July	8 30	Found dead in boiler.
Powderman .....	Lumberton, B.C.....	"	12 56	Delayed blast.
Labourer .....	Montreal, Que.....	"	16 58	Crushed beneath load of billets.
Water boy.....	Shelburne, N.S.....	"	21 .....	Slipped and fell when attempting to board moving auto.
Car operator.....	Victoria, B.C.....	Aug.	8 47	Fell through car window into car pit.
Elevator operator at office building .....	Toronto, Ont.....	"	11 69	Jammed between elevator and floor of building. Was dusting in elevator.
Labourer .....	Vegreville, Alta.....	"	18 23	Cut hand on cream can; infection.
Brakeman with rock company .....	Oxford Mills, Ont.....	"	18 27	Crushed by engine.
Manager .....	Winnipeg, Man.....	"	20 .....	Fell into elevator shaft.
Driller .....	Revelstoke, B.C.....	"	25 20	Killed by premature explosion.
Labourer .....	Restigouche Co., N.B.....	"	29 18	Ash bank caved in.
Labourer with grain trimmer.....	Goderich, Ont.....	Sept.	2 61	Drowned.
Oiler .....	Sydney, N.S.....	"	15 .....	Jammed between moving car and bumper.
Member of grain exchange....	Winnipeg, Man.....	"	19 41	Fell down fire escape where he went for air.
Stableman .....	Birchwood, N.S.....	"	23 .....	Arm caught on stick in fall from scaffold; bled to death.

## SUPPLEMENTARY LIST OF ACCIDENTS OCCURRING DURING THE FIRST AND SECOND QUARTERS OF 1923

Trade or Industry	Locality	Date	Age	Cause of Fatality
Musician at theatre.....	Timmins, Ont.....	Feb.	28 49	Fell striking shoulder. (No further particulars).
Filer .....	Fanny Bay, B.C.....	Mar.	30 35	Shingle block fell off table on to foot; blood poisoning.
Logger .....	Lloyd Point, B.C.....	Apr.	9 30	Struck by donkey engine which slid sideways while being moved.
Woodsman .....	Nakusp, B.C.....	June	9 21	Struck by falling tree.
Poundkeeper .....	Victoria, B.C.....	"	9 51	Thrown from horse which stumbled.
Woodsman .....	Kapuskasing, Ont.....	"	14 39	Caught in conveyor.
Labourer .....	New Canada, N.S.....	"	15 .....	Struck by rock from blast.
Labourer .....	St. John, N.B.....	"	18 30	Cave-in at clay pit.
Loader .....	Union Bay, B.C.....	"	28 25	Struck by log falling from load.

## IMMIGRATION TO CANADA DURING THIRD QUARTER OF 1923

THE following table compiled from information furnished by the Department of Immigration and Colonization gives some details respecting the total number of immigrants into Canada during the third quarter of 1923. For purposes of comparison the figures for the previous quarter and for the corresponding quarter of 1922 are also given.

The table on page 1340 gives the nationality, sex, occupation and destination of all immigrants, who entered Canada during the quarter under review.

## IMMIGRATION TO CANADA DURING THIRD QUARTER OF 1923

Period 1923	Great Britain and Ireland	U. S. A.	Other Countries	Totals
July .....	7040	1865	5055	13960
August .....	15970	2701	6578	25249
September .....	6398	2150	5624	14172
Third Quarter 1923....	29408	6716	17257	53381
Second Quarter, 1923..	22553	6399	12000	40952

## RECENT LEGAL DECISIONS AFFECTING LABOUR

THE two legal decisions which are summarized below deal respectively with the right of picketing by members of a trade union and with a case taken against an employment agent under the British Columbia Employment Agencies

Act. Elsewhere in this issue there appear two legal decisions, one delivered at Sydney, N.S., and the other at Peterborough, Ont., respecting seditious libel in which trade unionists were concerned.

### Picketing by a union declared legal

The proprietor of a restaurant at Calgary, Alberta, brought an action against members of the local branch of the Hotel and Restaurant Employees International Alliance, suing them for \$2,000 damages for injury to his business through picketing his restaurant. The case was carried to the Supreme Court of the province and from there to the appellate division. The appellate court judges failed to agree and recommended that it be sent back to the trial division of the Supreme Court for another hearing. By the judgment delivered by the Honourable Mr. Justice Ives it was held that the members of the union did what they were legally entitled to do.

The text of the judgment was as follows:

The plaintiff is the proprietor of a restaurant business known as the City Café. The defendants are members of a trade union which comprises restaurant employees. About April 12, the defendant, Stephenson, who is an official of the union, called upon the plaintiff and requested him to comply with the terms prescribed by the union relative to employment and to execute a contract to do so. The plaintiff referred the defendant to his manager, who pointed out that it would be financially impossible to conduct the business under the contract terms and refused to sign the contract. Thereupon the union, at a specially called meeting, resolved upon a peaceful picketing of the "City Café and all other unfair restaurants", of which there were a

number "unfair" meaning those who refuse to subscribe to union terms.

The picketing commenced and consisted in members of the union — this defendant — patrolling the street in front of the plaintiff's premises, at times standing about the café street door, and distributing to the public patronizing the café, handbills whereby the recipient was informed of those restaurants in the city of Calgary that were fair to union labour, no mention whatever being made of the plaintiff's café or any other "unfair" restaurant, the inference being, of course, that those not mentioned were unfair.

This resulted in a very serious decline in the plaintiff's business and financial loss which he here seeks to recover.

There is no doubt that the defendants agreed together to picket the City Café when at the special meeting the resolution was adopted. And at that time, it must have been in the mind of the defendants that the result of such picketing would reduce the café business. Indeed they could have no other object than that such reduction would compel a compliance with the union's terms of employment. But there is no evidence that any malice actuated the defendants or that injury to the plaintiff was their primary object or intent. They did legally what they were legally entitled to do. The public patronage of the plaintiff's business was entirely voluntary. His customers could lawfully cease their patronage at any moment and were induced to do so by the defendants in an effort to advance the legitimate interests of themselves and other members of the union.

The action will be dismissed with costs, including the costs of discovery.

(*Alberta — Dick vs. Stephenson et al.*)

### Agents Cannot be Hired by Employers in British Columbia to Supply Workers

In the October issue of the LABOUR GAZETTE on page 1176, the decision of Mr. Justice Murphy of the Supreme

Court of British Columbia was given in the case of Rex ex. rel. McVety vs. Joy, the finding being in reference to

an appeal taken by the Crown on a point of law by way of a Stated Case, following the dismissal by the Police Magistrate of the City of Vancouver of an information laid by the General Superintendent of Government Employment Offices of British Columbia against a private employment agent, on the ground that he had received a fee or compensation from an employer for referring workers to him for employment.

Mr. Justice Murphy reversed the decision of the Magistrate, but he also gave an interpretation of the B. C. Employment Agencies Act to the effect that it was not illegal for employment agencies to be established and to receive fees or compensation for sending workers to employers, provided such fees or compensation were not determined on a per capita basis of the number of workers so referred. This interpretation implied that a group of employers could establish an agency for the purpose of meeting their collective labour requirements provided the agent was paid by each employer on a monthly basis.

As such an agency was operating in Vancouver, the Provincial Department of Labour with a view to determining the validity of this interpretation, laid an information against F. J. Dumaresq, the manager of this agency. The Magistrate dismissed the case and an appeal was taken by the Crown in the County Court be-

fore His Honour Judge Cayley. The Judge's decision on the appeal which was delivered orally on October 15, was as follows:

Counsel have called my attention to the fact that no judgment was delivered in this matter before Vacation; I had thought I had given a decision in the matter at that time, following the decision of Mr. Justice Murphy in *Rex ex rel. McVety v. Joy* (1923) 3 W. W. R., 214. In *McVety versus Joy* the judge held that there is nothing in the language of the Statutes confining the operation of the section to collecting or receiving money from the employee. In this matter the company hired the defendant at a monthly rate, irrespective of whether he sent up a sufficient number of workmen or not. In other words, the employer did not pay the agent per head. I do not know that this makes any difference. His business was to send up employees, that was what he was paid for, and whether they were paid for in a lump sum by a monthly salary to the agent or whether the agent got so much per head seems to me to make no difference. I do not interpret *McVety* and *Joy* as suggesting that employers and the employees may keep up employment agencies without contravening the statutes. There is something in the judgment relating to a state of affairs which does not exist in this case, this case resembling more nearly the ordinary case of agent acting for pay in the manner now forbidden by the Act.

The appeal is allowed. This seems to be another test case and therefore the fine will be the minimum fine of \$10.00.

An appeal has been taken against this decision.

*(British Columbia — Rex vs. Dumaresq).*

# THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK.  
DEPUTY MINISTER—H. H. WARD.

Volume 23

DECEMBER, 1923

Number 12

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

**I**N addition to the regular monthly articles this issue of the LABOUR GAZETTE contains an account of the proceedings of the Fifth Session of the International Labour Conference, summaries of laws in Canada governing the employment of women and children, a report of the International Conference of Labour Statisticians which met at Geneva on October 29, and a review of various reports issued by the United States Coal Commission.

### Monthly summary.

Reports from the offices of the Employment Service of Canada

for the month of October, 1923, showed a decrease in the number of vacancies, applications and placements reported, as compared with September, and an increase on the whole when contrasted with the same time last year.

At the beginning of November, the percentage of unemployment among members of trade unions was 4.8 as compared with 2.0 per cent at the beginning of October and with 3.9 per cent at the beginning of November, 1922.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.69 at the beginning of November, as compared with \$10.65 for October; \$10.29 for November, 1922; \$11.08 for November, 1921; \$16.92 for June, 1920 (the peak); and \$7.96 for November, 1914. In wholesale prices the index number calculated by the Dominion

Bureau of Statistics, based upon prices in 1913 as 100, stood at 153.3 for November as compared with 153.1 for October; 149.6 for November, 1922; 153.6 for November, 1921; and 256.9 for May, 1920 (the peak).

The time loss due to industrial disputes during November was greater than during either October, 1923, or November, 1922. Seventeen disputes began or were in progress during the month, involving 2,651 employees and a time loss estimated at 64,000 working days. Corresponding figures for the previous month were 15 disputes involving 2,497 employees and a time loss of 55,994 working days, and for November, 1922, 14 disputes involving 2,036 employees and a time loss of 48,023 working days. At the end of November there were 15 disputes in progress involving 2,636 employees.

### Proceedings under the Industrial Disputes Investigation Act.

One report of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, and two applications for Boards, were received by the Department in November.

### Accident prevention in Nova Scotia.

An account of the progress of the Nova Scotia Accident Prevention Association during the six years of its existence was given at a meeting of the executive of the Association held

at Oxford, N.S., toward the end of November. As has already been noted in the LABOUR GAZETTE (September, 1923, page 1006) the association has the support of the Workmen's Compensation Board under certain provisions in the act. Mr. F. W. Armstrong, vice-chairman of the Board, noted a large increase in the number of fatal accidents in recent years, particularly in the lumbering industry, indicating a probable increase in the rate of assessment for this industry for next year. He appealed to employers of labour to assist in reducing the existing rates by instructing their employees in regard to safety precautions, and by posting placards and distributing the literature supplied by the Association. A table showing the number of accidents in various industries in the Province during the first two quarters of the current year was reproduced in the LABOUR GAZETTE for last September from *Industrial Safety News*, the organ of the Association. Similar figures for the third quarter show a reduction of about 10 per cent in the number of industrial accidents reported during that period. This reduction, however, is not evident in the lumbering and woodworking group, and is attributed in part to curtailment of operations at the Dominion Iron and Steel Company's plant at Sydney on account of labour troubles.

**Extension of  
educational  
facilities  
in Alberta.**

The Department of Education of Alberta has instituted a correspondence course for the benefit of families

living in remote parts of the province out of reach of public schools, which was put into effect at the beginning of October. In announcing the plan, the Honourable Perrin Baker, Minister of Education, stated that the courses will be conducted by the Department up to Grade VIII. Outline lessons will be furnished for the use of children up to that grade, instructions being given by the mothers. Readers will be furnished free of cost and in respect to other text

books the correspondence pupils will be on the same footing as those in organized school districts. The school inspectors will be used to as great an extent as possible particularly in the way of instructing parents. It is expected that from twenty to forty lessons will be given in the case of each applicant for the service.

**Superannuation  
in British  
Columbia.**

The British Columbia Provincial Secretary stated in the Provincial Legislaturè on November 19 that the sum of \$651,873 arising out of the administration of the Superannuation Act (1921, First session, chapter 56), was in hand on October 1, and had been deposited in the Provincial Treasury. The Superannuation Act took effect on April 1, 1921. In November 1,721 government employees and three others were contributing to the fund. All teachers employed in government institutions come under Part II of the act, 35 such teachers being among the present contributors. Teachers employed by school boards may obtain benefits under Part IV, provided that they and the School Board which employs them, with the approval of the local municipal council, enter into an agreement in writing for the purpose of securing the benefits of the act, and file this agreement with the Civil Service Commission. The provisions of this act were outlined in the December, 1921, issue of the LABOUR GAZETTE, page 1444.

**Resolutions  
adopted by  
trade  
unions.**

At the recent convention of the International Photo Engravers' Union of North America the following recommendations were approved: that it be compulsory upon all local unions and their members to respond fully and accurately in the annual wage survey of the International Union; that local unemployment reserve funds be heartily endorsed and that all local unions and members be appealed to to provide unemployment reserve funds;

that the executive press the demands for a Joint Research Department or a Joint Trade Improvement Committee, to investigate the practicability of all improvements that are offered to the trade for support, and that it be authorized to institute and conduct such statistical inquiries as may be found necessary and advisable and that all members and local unions be required to respond promptly and fully to such inquiries; that all local unions be encouraged to conduct trade and educational classes for apprentices and that the executive council be authorized to devise and enforce such methods as may ultimately result in making this supplementary training of apprentices compulsory upon all, to provide available books and literature on trade and economic studies, and to furnish a published list of helpful books that may be obtained in public libraries. It was also recommended that a fixed space be devoted in the official journal of the Union to include subjects of particular interest to apprentices in the trade. Approval was expressed of the investments made by the International Union in the purchase of shares in the Federation Bank of New York, and of the work being done by the Joint Industrial Council. It was thought desirable that local branch industrial councils should be formed in all engraving centres sufficiently large to place such joint agencies upon an efficient and profitable basis.

The Bakery and Confectionery Workers' International Union of America at its eighteenth annual convention held at Los Angeles, Cal. in September last, favoured a resolution for the establishment of a technical school for bakers at the Pacific Coast, and authorized the executive to secure information as to ways and manner in which such school might be established. A report to the convention stated that a course for bakers at the Lane Technical High School at Chicago was a valuable asset as it was "not exploited to overcrowd the bakery industry by

turning out those who may be unsuited to the craft, but to give technical training to those who have already had previous practical experience". Reports to the convention showed a decrease in the membership of the Union during the past two years of 4,946, the membership on July 31, 1923, being 22,763.

**Pension plan  
of Ontario  
Hydro Electric  
Power  
Commission.**

The Hydro - Electric Power Commission of Ontario has recently adopted a pension and insurance plan for the benefits of its employees. The plan was approved by provincial Order-in-Council on October 29 and became effective on November 1. The administration of the plan is under the direction of a body called the Pension Board composed of seven representatives of the Commission and four representatives of the employees whose names are on the pension and insurance list. The Board will hold monthly meetings and has power to enforce rules as approved by the Commission for the efficient operation of the fund. Subject to the regulations of the Commission, the Board may determine the eligibility of the employees to receive pension or insurance allowances; to fix the nature and amount of such allowances, and to prescribe the conditions under which allowances become payable. It shall make rules for its own government not inconsistent with these regulations and shall from time to time make reports of its actions to the Hydro-Electric Power Commission. The proceedings of the Board shall be subject to the approval of the Commission. The Secretary of the Board shall keep a pension and insurance list containing the names of all the employees entitled to share in the benefits. These are called the permanent employees. Pensions will be granted to permanent employees at the age of 65, or at the age of 60 after twenty years' service, or after a service of ten years if totally disabled. Female employees may be

pensioned at 60 years of age, or at 50 years after 20 years' service, or if totally disabled after ten years' service. The amount of pension is fixed at one-eightieth of the average yearly salary during the five consecutive years when the salary is greatest multiplied by the number of years' service, but shall not be less than \$365 a year.

If a permanent employee is totally disabled and is granted a total disability pension by the Workmen's Compensation Board, he shall receive from this pension fund a sufficient sum to bring the total pension from both sources up to the amount provided for in these regulations. On the death of a permanent employee who has not been pensioned there shall be paid to the estate of such employee a sum equal to 5 per cent of the current salary multiplied by the number of years' service with the Commission plus one year's current salary, but in no case can there be paid a sum exceeding twice the current salary. If a pensioned employee should die before receiving as pension payments a sum equal to what his estate would have received had he died in service, there shall be paid to the estate a sum equal to the difference between these two amounts. The pension and insurance fund will be formed by an annual contribution by the Commission of a sum equal to five per cent of the salaries of all permanent employees from November 1, 1923, to which will be added two and one-half per cent deducted from the monthly salary of every permanent employee. When a permanent employee leaves the service of the Commission for any reason except retirement or pension, he shall be given a sum equal to the deductions that have been made for his salary accumulated at 4 per cent interest. At least every five years there shall be an examination of the funds by an actuary, and if the funds in hand are found insufficient to provide the benefits according to these regulations, the benefits as to all future payments shall be

diminished so as to make the fund solvent.

**Pensions for  
widows of  
locomotive  
engineers.**

The Brotherhood of Locomotive Engineers, in accordance with a decision at their last triennial convention, are now providing pensions for the widows of deceased members of the organization. This is said to be the first provision of the kind by a labour organization on this continent. So far only the widows of pensioned members of the Brotherhood are entitled to benefit, but union officials hope to be able to extend the provisions to the widows of all members before the end of 1923. Grand Chief Warren S. Stone stated that they had arranged to put the widows' pension into effect on December 1, 1923, when 281 widows would be placed on the pension roll and commence to draw a fixed amount each month. There would also be paid to them a total amount of \$80,650 for back pensions from the date of their husbands' death.

**Pension  
scale of  
Toronto city  
firemen.**

Professor M. A. Mackenzie, of the University of Toronto, at the request of the City Board of Control, recently made an actuarial valuation of the Toronto Firemen's Benefit Fund. The men of the Department have been dissatisfied for some time, it is stated, with the extent of the pension benefits accruing to them, as compared with the similar provision which is made for members of the police force under their fund. The present scale of firemen's benefits limits the yearly pensions as follows: the chief, \$1,500; deputy chiefs, \$1,200; other ranks (including district chiefs), from \$675 to \$1,000. Under the police scale the chief constable on retirement would receive \$3,650, the deputy-chief, \$3,000 and other ranks from \$975 to \$2,000. It is understood that a report presented by Professor Mackenzie to the Board of Control early in December recommend-

ed that all members of the Fire Department should be required to contribute on a common basis of seven per cent of the average amount of salary actually received during the last three years, and that the minimum retiring allowance or pension should be fixed at \$1,000 and the maximum at \$2,000.

These recommendations are not to be considered before the coming year.

#### Manitoba

minimum

wage

administration.

The Winnipeg Trades and Labour Council recently questioned the right of the Minimum Wage Board of Mani-

toba to grant to particular firms exemptions from the requirements of orders issued under the act. This exemption system was explained in the Provincial Legislature in the session of 1922 (LABOUR GAZETTE, March, 1922, page 266). Permits to employ female help at wages below the minimum rates are issued, it is stated, only under exceptional circumstances; for example in one case the majority of the employees affected wished to work shorter hours in order that none should be laid off. Section 10 of the act provides that "the Board may issue to any employee physically defective, or to a female learner in such class of occupation as usually requires to be learned, a special license authorizing the employment of the licensee under such rules and regulations as may be made under this act." Members of the Trades and Labour Council claimed that there was nothing in the act enabling the Board to grant dispensations, and advised the Council to press for a stricter enforcement of the act. The Council will also endeavour to have the Minimum Wage Board brought up to its full strength of five, as required by the Act, instead of three members, as at the present time.

#### Sunday

observance

in Quebec.

The movement to further the observance of the Sunday rest in the industries of the pro-

vince of Quebec was noted in the last issue of the LABOUR GAZETTE. A large

number of municipal councils in the Province, in response to an appeal by the Sunday League (La Ligue du Dimanche) have since adopted the following resolution:

Whereas certain employers in the pulp and paper and construction industries, compel their employees to work on Sunday; and whereas Sunday labour has become habitual in many parts of the province and the practice tends to grow steadily; and whereas Sunday labour disorganizes family life and the social order, and that it is forbidden by the church and by the laws of this country; and whereas it is important by prompt and drastic means to check the evils which result from Sunday labour; and whereas it is the duty of the constituted authorities to secure the maintenance of the social order and the observance of the laws, the municipal council earnestly requests the Honourable Prime Minister to take the steps necessary to protect the family and society in this province by requiring a stricter observance of the laws concerning Sunday observance.

The responsibility of the Provinces under the Lord's Day Act of Canada was defined by Premier Taschereau to a delegation of Jewish merchants from St. Louis ward, Montreal, in November. The delegation asked the premier, who also occupies the position of Attorney-General of Quebec, that he refuse to grant permission to the City authorities to prosecute under the Lord's Day Act in cases affecting bakeries, grocery stores, butcher shops, and other establishments hitherto open for business on Sundays. The premier pointed out that the law was a federal one, with the onus of refusing permission to take advantage of it resting upon the Attorney-General of each province, and that he could not, in all justice, refuse to grant permission to prosecute a violation of the law when asked by the city of Montreal. The section of the Dominion Lord's Day Act (Revised Statutes of Canada, 1906, chapter 153) to which Premier Taschereau referred reads as follows:

"17. No action or prosecution for a violation of this Act shall be commenced without the leave of the Attorney-General for the Province in which the

offence is alleged to have been committed, nor after the expiration of sixty days from the time of the commission of the alleged offence."

A delegation from many parts of the province of Quebec waited on Premier Taschereau on December 11, asking him to secure a better observance of the Lord's Day throughout the province as a day free from work, etc. The premier promised to give the matter serious consideration and said that he would do his best to bring about a more faithful observance of the law.

School of  
papermaking  
at Three  
Rivers.

*The Pulp and Paper Magazine* of November 8, contained an account of the work of the Three Rivers School of

Paper Making, which was officially opened during that month. The plan for its establishment was noted in the *LABOUR GAZETTE* of last August (page 828). The first class was expected to be composed of from ten to fifteen students. "The new school, the first of its kind on this continent", says *The Pulp and Paper Magazine*, "has the active co-operation of the industry, in that the Canadian Pulp and Paper Association has appointed an advisory committee to assist the provincial government and school authorities, and the mills at Three Rivers have each been asked to appoint a representative to a local board. For the present, the school will be conducted on the part time plan, but in such a way as to permit students to work a regular shift without disturbing the mill schedule, a problem that has heretofore been a serious handicap to regular attendance on classroom instruction. The Institute of Industrial and Domestic Art will provide extra-mural instruction to those who cannot conveniently attend the classes. The person who desires an education so eagerly that he will work eight hours a day to maintain himself and devote nineteen hours a week to his studies (all studying will

be done at school) will be laying the foundation for a successful and satisfying career as a pulp or paper maker. The schedule outlined is not too hard for a person with some ambition and will power. We know men who worked as many hours seven days a week while carrying thirty hours of college work which necessitated hard study outside the class room. The man who undertakes such a task and completes it will make good. The Three Rivers school has a good technical school already organized and the addition of the Paper Making School will extend an educational service that should be welcomed and supported, and for the establishment of which the Quebec Government is to be commended".

Co-operative  
management  
of railway  
shops.

The International Association of Machinists have prepared a plan of co-operative management of the mechanical branches of the Canadian National Railways, which they propose to submit for the consideration of the executive of the system. A similar plan was adopted as an experiment about a year ago, on the Baltimore and Ohio Railroad, at the suggestion of Mr. William Johnston, the International president, who now claims that the experiment has proved successful "beyond the most sanguine expectations". He states that since the introduction of the plan on the Baltimore and Ohio system the efficiency of the road had improved to such a degree that the majority of competing railways are beginning to investigate its merits. The cost of production has been reduced, waste eliminated, and working conditions greatly improved. The new plan provides for closer relation between the employer and worker through liaison departmental heads. The men appoint their own mechanical engineer, who works in co-operation with a similar representation of the company.

**Shorter  
hours to  
lessen un-  
employment.**

Officials of the Can-  
adian Pacific Railway  
System Federation, an  
organization of railway  
employees having its

headquarters at Montreal, held negotiations during November with the management of the railway company on proposals submitted by the men for changes in working hours in the main shops of the system with a view to eliminating unemployment during the coming winter. It was proposed to substitute a uniform 40-hour week for the present working week of 44 hours at the shops so as to obviate the necessity of laying off men at certain periods. The management undertook to prepare an estimate showing what measures would have to be adopted in regard to the numbers of men employed which would result from the proposed change, and further negotiations will be held when these figures are available. A 40-hour week began in the car department of the Canadian National Railways at Stratford early in December, about 30 men being affected by the change, which was from a 48-hour week.

**Women's  
Educational  
Federation  
of Ontario.**

The Women's Educa-  
tional Federation of  
Ontario, at a meeting  
at Hamilton during  
November, adopted a

resolution to the effect that the Minimum Wage Act should be extended so as to include boys and youths and that the provincial Factories Act should be amended to provide an 8-hour day and 44-hour week for all minors in industry. A committee was appointed to confer with the Trades and Labour Labour Council with a view to establishing an information centre in connection with workmen's compensation, and a close study of the Provincial Act is to be undertaken, owing to complaints that payments in some cases are too long deferred.

**Chile  
and the  
International  
Labour  
Office.**

With a view to com-  
plying with the provi-  
sions of the Treaty of  
Versailles and facilitat-  
ing collaboration with  
the Chile delegations

to the International Labour Conferences, the Chilean Government has recently decided to set up a special committee, the functions of which will be to study the questions which come before the International Labour Conference, and to supply the Governing Body of the International Labour Office with all information which they may require for the Chilean Government. The committee will consist of present and past delegates of Chile to the International Labour Conferences, the Chairman of Foreign Affairs, Committee of Senate and Chamber of Deputies and Directors of the Labour Office. It will submit a detailed annual report on the work of the International Labour Office.

**Factory  
regulations  
in China.**

The Chinese govern-  
ment issued a decree  
last March promulgat-  
ing provisional factory

regulations pending the enactment by the Parliament of a law for the protection of workers which is now under discussion. These regulations give effect to the recommendations with respect to China of a commission appointed at the Washington session of the International Labour Conference (League of Nations) to consider the application of the convention limiting hours of work to certain special countries.

The main provisions of the regulations are as follows:

The hours of work in factories employing more than 100 persons are limited to 10 per day for adult workers and to eight a day for workers under 17 years.

Rest periods are provided for at least two days in the month for adult and of at least three days in the month for male workers under 17 years of age,

and for female workers under 18 years of age.

Employment of boys under 10 and girls under 12 is prohibited.

Three weeks before and after childbirth maternity benefits to women workers are granted.

Night work of male persons under 17 and female persons under 18 years of age is prohibited.

Provision of breaks is made amounting to at least one hour per day.

Payment for overtime at increased rates is provided.

Compulsory submission to administrative authorities by the employer of regulations dealing with indemnities, benefits, old age pensions, etc. is required.

The field of application of these regulations extends not only to Chinese factories but also to foreign factories established on the territory of China, irrespective of the number of persons employed, in which conditions exist which are dangerous to the life or injurious to the health of the workers.

---

The United Mine Workers of America will hold their convention at Indianapolis, Ind. on January 22, 1924.

The Government of Ontario is stated to be engaged upon a revision of the salaries of the Provincial civil service. Any changes which may be made in the present rates are to be made retroactive to November 1.

Mr. T. M. Molloy, commissioner of labour and industries of Saskatchewan, commenting on criticisms of the Province's immigration policy, recently stated that "of 526 girls who have been brought to Saskatchewan from the inauguration of the advanced fares in 1920 up to June 15, 1923, only six have returned overseas, and of the sum of \$45,411.55 advanced to the girls the sum of \$42,980.98 had been repaid up to June 15, 400 having repaid their

loans in full, and the balance of 126 paying all but the sum of \$2,430.57."

The Elevator and Hoist Board of Manitoba, in accordance with the Elevator and Hoist Act (Statutes of Manitoba, 1919, chapter 31), recently drafted rules and regulations respecting the construction operation and maintenance of passenger and freight elevators and hoists which became effective from October 15.

The bill to provide for registration of barbers and otherwise regulate the practice of barbering, which was to have been introduced in the legislature of British Columbia during the session of November-December of the present year (LABOUR GAZETTE, Sept. 1923, page 977) was abandoned, and the petition filed by the promoters was not presented.

The Montreal Trades and Labour Council held a meeting in November in connection with the enquiry now being held by the Labour Commission of the Province of Quebec, which is considering possible changes in the Workmen's Compensation law. The Council favoured the repeal of the existing Provincial law, and the enactment of a new one based on the principle of the collective responsibility of employers for industrial accidents, similar to the laws now in force in Ontario and other Canadian provinces.

The average wage of workmen compensated under the Ontario Workmen's Compensation Act is now about \$22 a week; in 1920 it was \$25.50 and in 1915 \$13.25 a week.

The proprietor of an ice cream parlour at Edmonton was found guilty in the local police court in November of an infraction of Order No. 3 of the Minimum Wage Board, which fixes a minimum weekly rate of \$14 a week of six days for experienced employees in hotels, restaurants, boarding houses etc., or \$16.50 for a week of seven days. Counsel for the defence challenged the order as being *ultra vires*, interfering

with the rights of private citizens. It was also contended that the definition in the order of an "Experienced female", as one who had served three months, was unreasonable, that period being too short for a girl to learn the business. The magistrate replied that the law must be enforced as it stood, found the accused guilty of the offence, and warned him of the consequences of further infractions of the Board's order, which would involve fines ranging from \$25 to \$500 for each offence.

The number of pupils enrolled in the public schools of British Columbia in 1923 is 94,888, as compared with 64,570 in 1916, the number of such schools in operation being 1,044 and 808 in these years respectively. The enrolment in the Normal School for the present year is 689; 1,194 students are enrolled in the University with 365 others attending for short courses.

The Retail Grocers' Association at Winnipeg is making an effort in connection with the municipal elections for the coming year to have the existing early-closing bylaw repealed. The grocers claim that they suffer serious losses from numerous prosecutions and loss of business under the bylaw. It is stated by officials of the Association that even if the bylaw should be repealed the clerks and other employees would not be obliged to work more than eight hours in the day, while the bylaw affords little protection to the workers, as the larger stores can close their doors at certain hours, and keep their employees at work as long as desired.

At the last convention of the Dominion Railway Mail Clerks resolutions were adopted favouring a higher standard of examination for the appointment of railway mail clerks after the present temporary men have been dealt with; that only one man be required to accompany mails to and from stations; and that in the event of injury to any railway mail clerk in good standing the district should communicate with the president or secretary of the Dominion

Federation, laying facts before him and asking for instructions.

At the recent convention of the International Association of Fire Fighters it was decided to ask the Dominion Government to pass a law similar to the one in force in Ontario establishing the "double-platoon system" in fire departments of all Canadian cities. The Government was also to be asked to provide for a system of pensions in all Canadian cities with a population of over 10,000 or wherever firemen shall be permanently employed. It was also decided to ask for measures providing for old age pensions and the elimination of child labour. A plan of insurance was presented on which a referendum is to be taken at a later date.

At the fourth annual convention of the Provincial Federation of Ontario Fire Fighters held at Hamilton in August last, a resolution was adopted favouring an amendment to the Workmen's Compensation Act to the effect that where there is no pension or superannuation fund in connection with a fire department, and where a fireman or officer is hurt or taken sick by reason of his duty and he does not receive his salary for the time he is off duty by reason of such accident or sickness, that such departments, firemen and officers be covered by the Workmen's Compensation Act.

The city firemen of Sydney, N.S. are asking the City Council to establish a two-shift system. They point out that under existing arrangements they are on duty continuously, with only three days' relief each month. It is stated that the proposed change would involve the city in additional annual outlay of \$6,000.

According to a report on quarry accidents in the United States during the calendar year 1921, there were 10,585 accidents during the year of which 1.13 per cent or 120 were fatal, 0.09 per cent resulted in permanent total disability, 3.12 in permanent partial disability,

17.91 per cent in temporary disability of more than 14 days, and 77.75 per cent in disability not exceeding 14 days but more than the remainder of the shift on which the accident occurred. The fatality rate declined from 2.31 per thousand employees in 1920 to 2 per thousand in 1921, and the injury rate rose from 145.51 to 174.54, these rates being based upon a standard of 300 working days per year. Reports from 1,764 operators showed 77,185 employees, who worked 17,987,547 shifts, an average of 233 work days per man. As compared with 1920, these figures indicate an increase of 47 operating companies, a loss of 5,139,101 shifts, and a reduction of 34 workdays per man.

The railway shopmen of the New York Central Railway Company recently protested to the United States Railroad Labour Board against the Company's plan to establish piece-work in its shops. The protest was withdrawn during November, an agreement having been reached between the two parties, the shopmen's federation agreeing tentatively to accept the piece-work plan.

The federation representing the shop crafts on the Pennsylvania Railroad system brought suit against the Company in the Federal District Court at Philadelphia, on November 2, for \$15,000,000, to make up an alleged underpayment in wages resulting from the company's refusal to abide by the rules of the United States Railroad Labour Board. The suit was filed on behalf of 60,000 shopmen. It is said to be the first suit of its kind in the United States, and is expected to go eventually to the United States Supreme Court.

The Department of Labour of the State of Victoria, Australia, has recently issued a series of safety pamphlets describing guards to dangerous machinery which are in use in that State. These pamphlets deal with the following subjects: power presses, surface planing machines, chaffcutting

machines, mincing machines, and circular saws.

It is announced that New Zealand miners are considering a proposal by the government to take over a big state-owned mine on a co-operative basis. The men would supply labour, materials and supervision being provided by the state.

A bill has been introduced in the House of Assembly, New Zealand, the object of which is to enable companies to issue labour shares. The Minister for Labour stated that it embodied a scheme under which a copartnership could be formed such as was now operating in England, that it would give the workers a share in business, management and profits, the workers would benefit and could not lose anything. The scheme, he said, had nothing to do with wages and there was no compulsion. He thought it might help to solve labour difficulties.

A bill has been introduced in the Belgian Parliament providing for annual holidays with pay for manual and non-manual workers employed in or about the mines. Under the bill, the holidays would vary, according to length of service, from 4 to 16 days for underground workers, and from 3 to 12 days for surface workers.

The Government of the Irish Free State has recently promulgated legislation on unemployment insurance. This legislation adopted and amended in certain respects the Unemployment Insurance Acts of the United Kingdom of 1920, 1921 and 1922. The original text of the bill contained a clause which was subsequently dropped authorizing the Minister of Industry and Commerce, in the case of works of public utility, to pay the unemployment benefit, under certain conditions, to the employer instead of the employee, thus enabling the employer to continue to engage the worker in question by paying him from his own funds only the difference between the unemployment benefit and the wage.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation, Strikes, Prices.

---

#### The Labour Situation

**T**HE volume of employment at the beginning of November as indicated by firms reporting to the Dominion Bureau of Statistics, showed a further moderate decline as compared with the previous month, but conditions continued to be more favourable than at the same period of last year. At the beginning of November the percentage of unemployment among the members of trade unions was 4.8 as compared with 2.0 at the beginning of October and with 3.9 at the beginning of November 1922.

Reports from the offices of the Employment Service of Canada for the month of October, 1923, showed a decrease in the number of vacancies, applications and placements reported, as compared with September but an increase on the whole when compared with the same time last year.

The following gives the employment situation at the end of November as shown by the Superintendents of the offices of the Employment Service.

The majority of farmers in the Maritime Provinces had completed all outside work and consequently few requests for workers were received. A number of building projects were completed but work had continued on the construction of dams and transmission lines in various districts. A number of men from outside the province were registered at the office, several of whom were placed in employment at the lumber camps. The demand, however, in the logging group was not active.

The offices in Quebec reported a pronounced falling-off in orders for bushmen and loggers, but an expansion was anticipated for later in the season. The

building industry maintained the same volume of employment as reported previously, a greater demand for plasterers, bricklayers and joiners being shown. Road construction and outside building had fallen off considerably. Work along shore was very slack as navigation had closed and a number of longshore workers were registered as unemployed. No improvement was noticed in manufacturing industries, the offices reporting considerable dullness in the metal trades and textile industries. A decline in the demand for domestic workers was reported, with a large number of applicants available.

In Ontario a slump in employment was reported, although conditions indicated clearly that there was less unemployment at the end of November this year than in 1922. In some sections building tradesmen were actively engaged but on the whole the construction group showed a marked decline. Outside work was nearly finished with the consequent depletion of staffs on railway and road construction gangs. A decrease was reported also in the farming group, although placements from Toronto, Hamilton and London, continued in small numbers. The logging industry remained brisk, numerous calls for lumbermen and sawyers being noted at the northern offices. A slight improvement was reported in manufacturing centres with vacancies offered for weavers, spinners and metal workers. The demand for permanent household help was great with a scarcity of experienced workers.

Dullness in demand was reported of all industries in Manitoba at the end of November. In the farming group a marked decline was recorded there being a normal demand for men for win-

ter work. Construction work remained active with outside employment fairly brisk. Few calls for labourers were registered, although little unemployment was shown among building mechanics. Continued mild weather caused a temporary suspension in activities in the logging group with a consequent decline in demand. However the office maintained a high average of placements of lumbermen in Manitoba and Ontario camps. Little change was reported in the women's section, a very slight increase being shown in the volume of employment afforded in permanent household work.

A fair number of requests for farm hands were registered at the offices in Saskatchewan, with applicants about equal to the demand. The seasonal reduction in the construction group was more marked, although a few orders for inside carpenters, finishers, labourers and railway maintenance workers, were registered in some districts. The demand from the northern sections of the province for loggers and bushmen was maintained while many of more southerly offices transferred experienced workmen to the camps. Comparatively few calls were received for housekeepers and domestics for the rural sections with a demand from the urban districts.

In some sections of Alberta an increase in the number of orders for men for winter work on farms was reported. Although no large demand was shown in the construction groups many of the offices reported a number of vacancies for labourers for excavation, road and railway maintenance work. No scarcity of experienced bushmen was shown, the demand being fairly brisk, but some difficulty was experienced in securing tie makers in sufficient numbers. Calls for domestic workers were in approximately the same volume as previously reported, with several unfilled vacancies for experienced housemaids and cooks.

The approaching colder weather had tended to speed up outside construction work with the result that many projects were completed. The supply of labourers and skilled building tradesmen was readily absorbed, although comparatively few vacancies were offered in the construction group. The demand in the logging industry was brisk, calls for tie makers, loggers, sawyers and swampers, being received at all the offices. A scarcity of experienced bushmen is anticipated for the coming month. Work along shore was brisk with many stevedores placed at the docks. The mining industry was quiet. Few calls for farm workers were received with several experienced applicants available at the offices.

#### EMPLOYERS' REPORTS.

The trend of employment at the beginning of November was again slightly downward, largely on account of continued seasonal curtailment in construction, saw mills and canneries. According to employment returns tabulated by the Dominion Bureau of Statistics, there were contractions affecting over 7,500 persons and causing the index number to decline from 99.5 on October 1 to 98.8 on November 1. All provinces shared to some extent in the downward movement; the declines in Quebec and the Prairie Provinces were the largest, while those in Ontario were slight. In the Maritime District the greatest contractions were indicated in saw mills, on highway and railway construction and in coal mining. On the other hand, substantial recovery was shown in cotton factories; logging camps were decidedly busier and shipping and stevedoring also afforded more employment. In Quebec improvement in textile, logging, shipping and stevedoring and building construction was insufficient to offset reduction in personnel in saw mills, railway and highway construction, railway transportation, asbestos mines, quarries and locomotive works. Varying tendencies in

Ontario resulted in a slightly unfavourable balance of employment. Textile, automobile and some other manufactures were considerably busier than at the beginning of October, while substantial increases in activity were indicated in logging camps. On the other hand, saw mills, fruit and vegetable canneries, building, highway and railway construction suffered heavy seasonal losses, and employment in communication also showed a falling off. The most important factor contributing to the decrease in the Prairie District was the continued curtailment recorded in railway construction and maintenance; this was supplemented by losses in saw mills, railway car works, building construction and summer hotels. Coal mines, logging, transportation, biscuit and electric current factories in the Prairie Provinces reported improvement. In British Columbia logging camps, coal and metallic ore mining were busier, but saw mills, fruit canneries, building, highway and railway construction released fairly large numbers of workers. Of the six cities for which separate tabulations are made, only one (Montreal) recorded increased employment. The declines in Toronto, Ottawa, Hamilton, Winnipeg and Vancouver, however, were rather slight. In Montreal improvement on quite a large scale was recorded in water transportation, while building construction, trade, fur, shoe, glass and cement factories also registered increases in personnel. On the other hand, sugar, tobacco and locomotive works were slacker. Expansion in Toronto in confectionery, paper, printing, garment making and textiles, brass, bronze, copper and photographic appliances factories and in retail trade was slightly more than offset by contractions in agricultural implement and machine shops, in foundries, communication, transportation and construction. The largest declines in Ottawa took place in construction, in which they were fairly

heavy. Cotton and knitting mills in Hamilton reported decided improvement, but iron, steel, electric current and canning factories and building contractors in the same city recorded curtailment of operations. In Winnipeg there were additions to staff in biscuit, electric current and printing houses, but employment in railway car shops and in building construction showed a downward trend. There was a falling off in employment of three per cent in Vancouver, where there were general though not particularly large declines in many groups. Canneries, steel shipyards, shipping and stevedoring and building construction reported the most pronounced reductions.

A review of the returns by industries showed that conflicting tendencies were evidenced within the manufacturing division. The completion of the season's work in many mills caused heavy declines in the lumber group. Fruit, vegetable and fish canneries also recorded seasonal loss, while pulp, paper and rubber factories were slacker. On the other hand, fur, boot, shoe, cotton and other fabric, knitting, tobacco, electric current, automobile, machinery and photographic appliance work showed decided improvement. Logging camps absorbed over 4,600 additional workers. Coal and metallic ore mines, shipping, stevedoring and retail trade reported increases in the employment afforded. Asbestos mines, quarries, communication, railway transportation, all branches of construction, summer hotels and wholesale trade showed considerable curtailment. With very few exceptions employment in these industries was on a higher level than at the beginning of November, 1922, and without exception, conditions were more favourable than at the same period of 1921.

An article elsewhere in this issue gives in some detail the employment situation as indicated by employers at the beginning of November.

TRADE  
UNION  
REPORTS.

The situation at the close of October as reported by 1,461 labour organizations with an aggregate membership of 156,849 persons was less favourable than in the previous month, 4.8 per cent of the members being unemployed, as compared with 2.0 per cent at the end of the preceding month. In comparison with October of last year a larger percentage of unemployment was shown also, 3.9 per cent of the members being out of work on October 31, 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based it should be understood that such figures have reference only to the organizations reporting). In every province less work was afforded than in the previous month, the declines in Nova Scotia and Quebec being most pronounced, due, in Quebec, to between season idleness in garment establishments in Montreal and in Nova Scotia, to lessened activity in the coal mines and among building tradesmen. In comparison with October of last year less employment was reported in all provinces with the exception of Manitoba and British Columbia. Reports received from 405 unions in the manufacturing division with a membership of 47,065 persons showed that 9.6 per cent of the members were unemployed at the end of October of this year as compared with 2.9 per cent in September and with 5.5 per cent at the close of October 1922. Seasonal dullness in the garment trade accounted

for the greater part of inactivity shown in the manufacturing industries though conditions for iron and steel workers, metal polishers and wood workers were also less favourable. Cigar and tobacco, leather and glass workers, however, were much more fully engaged. Coal miners in Nova Scotia and Alberta were not so active but miners in the British Columbia coal fields reported no idleness. Building operations were somewhat curtailed during October owing to the setting in of seasonal inactivity. Reports were received from 173 unions in the building group comprising 18,273 members, 1,182 of whom were out of work, a percentage of 6.5 as compared with 4.3 per cent at the close of September. All tradesmen in the group with the exception of tile layers, lathers and roofers were not so busy as in the previous month. In comparison with October of last year employment for steam shovel and dredgemen, bridge and structural iron workers, brick layers, masons and plasterers, carpenters and joiners, granite and stone cutters and plumbers and steamfitters was in lesser volume, but improvement was shown by electrical workers, painters, decorators and paperhangers, tile layers, lathers and roofers, and hod carriers and building labourers. Transportation workers reported very little change in the situation, 1.8 per cent of the members being out of work at the close of October this year as compared with 1.0 per cent in September. Workers in the shipping and stevedoring division and steam and electric railway employees all shared in this slight decline. In the steam railway division conductors and firemen were better employed, but the improvement was more than offset by lessened activity for trainmen, express and maintenance of way employees. The situation among engineers remained unchanged. Retail clerks were slightly better engaged. Employment for fishermen was at a lower

level. Lumber workers and loggers reported no unemployment. Reductions in activity were reported by hotel and restaurant and theatre and stage employees, barbers and stationary engineers and firemen.

**EMPLOYMENT OFFICE REPORTS.** During the month of October, 1923, the Employment Service of Canada made 59,101 references to positions and effected a total of 56,917 placements. The number of placements in regular employment was 47,957 of which 44,417 were of men and 3,540 of women, while the total placements in casual work was 8,960. Vacancies for men numbered 53,867 and for women 9,723, a total of 63,590 opportunities for employment registered at the offices. The number of applications for employment was 68,322, of which 56,709 were from men and 11,613 from women. A decline is registered in the volume of business as compared with the preceding period, but in comparison with the corresponding period a year ago a decided increase is reported. A report in detail of the work of the offices for this month may be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED.** According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during October declined to \$9,701,080 from \$10,485,613, in the previous month, and \$10,344,770 in October, 1922.

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded in Canada during November amounted to \$15,632,200, compared with \$30,078,100 in October, and \$21,453,900 in November, 1922. Residential buildings amounted to \$6,692,700, or 42.8 per cent of the November total; business buildings to \$2,834,900, or 18.1 per cent; industrial buildings to

\$733,400, or 4.7 per cent; and public works and utilities, \$5,371,200 or 34.4 per cent. Of the total value of contracts awarded in Canada during November, \$7,357,100 was to be spent in Ontario, \$6,125,300 in Quebec, \$487,900 in the maritime provinces and \$1,661,900 in the western provinces. The total value of the construction awards during the eleven months of the year was \$292,746,800, compared with \$259,371,400 during the corresponding period of last year, an increase of 12.8 per cent.

**PRODUCTION REPORTS.** The Dominion Bureau of Statistics reports that the output of pig iron in Canada showed a slight decline to 73,598 gross tons in October as compared with 75,216 tons produced in September. The average monthly production for the ten months ending October was 76,000 tons and the total production during this period of 758,194 tons showed an increase of 142 per cent and 50 per cent over the outputs in the corresponding periods of 1922 and 1921, when the quantities produced were 312,877 tons and 506,730 tons respectively. The entire output of basic pig iron during October, amounting to 40,986 tons was made for the further use of the reporting firms; this was 11 per cent less than the September production of 45,826 tons. Foundry iron amounted to 17,377 tons; and malleable iron showed an increase of 37 per cent amounting to 15,235 tons. At the end of the month there were in operation seven furnaces including one at Sault Ste. Marie, Ont., one at Port Colborne, Ont., two at Hamilton, Ont., and three at Sydney, N.S. Ferro-alloys rose to 3,013 tons, an increase of 17 per cent over the 2,581 tons produced in September, and 33 per cent over August output of 2,258 tons. The production consisted

almost entirely of grade containing 15 per cent silicon.

The production of steel ingots and castings amounted to 67,496 tons, an increase in all grades amounting to 1,162 tons more than the September output of 66,334 tons. The increase in the basic open hearth steel ingots production was 735 tons making a total of 62,870 tons for the month. The output of 4,626 tons of steel castings marked an increase of 427 tons. The average monthly production for the ten months ending October was 79,000 tons and while this average was lower than the 1920 average monthly record of 96,000 tons it was greater than the corresponding figures for 1922 and 1921 when the average monthly outputs were 39,000 tons and 55,000 tons respectively.

A report from the Department's correspondent at Cobalt states that 21 cars of silver ore were shipped during the month from the Cobalt camp, containing approximately 1,588,670 pounds of ore, as compared with 8 cars of silver ore containing 641,740 pounds in the previous month. The Nipissing Mine shipped 88 bars containing 101,133.67 ounces of silver, and The Mining Corporation of Canada shipped 148 bars containing 149,920.68 ounces of silver, making a total of 236 bars containing 251,054.35 ounces of silver for the month of October, as compared with 427 bars containing 455,500 ounces for the previous month.

A report from the British Columbia Forestry Branch shows that 218,229,087 feet board measure of timber was scaled in the province during October. The total includes Douglas fir, 96,434,711 feet; red cedar, 45,908,530 feet; spruce, 27,091,981 feet; hemlock, 28,026,940 feet; balsam, 6,474,405 feet; yellow pine, 6,197,989 feet; white pine, 1,473,279 feet; jack pine, 2,310,262 feet; larch, 3,679,289 feet; cotton wood, 607,322 feet; other species, 24,379 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$26,391,994 in October as compared with \$21,819,162 in September. The gross earnings for the first ten months of 1923 amounted to \$207,950,222 as compared with \$189,366,655 for the same period in 1922.

The gross earnings of the Canadian Pacific Railway for October were given in a preliminary statement as \$23,769,733 in comparison with \$23,061,547 in the same month of the previous year; and for the ten months ending October 31, 1923, as \$154,456,096, while for the same period in 1922 they amounted to \$147,888,319.

#### Strikes

The time loss due to industrial disputes reported to the Department during November was greater than during either October, 1923, or November, 1922. There were in existence at some time or other during the month 17 disputes, involving 2,651 employees and a time loss of 64,000 working days, as compared with 15 strikes in October, involving 2,497 employees and a time loss of 55,994 working days. In November, 1922, there were recorded 14 disputes involving 2,036 employees and a time loss of 48,023 working days. Two new disputes commenced during November with a time loss of 1,704 working days. One of the strikes commencing prior to November and one strike commencing during November terminated during the month. At the end of the month, therefore, there were 15 disputes involving 2,636 workpeople.

#### Prices

The movement in retail food prices was slight, increases in dairy products being offset by declines in meats and potatoes. The cost of a list of twenty-nine staple foods for an average family

of five in terms of the average retail prices in some sixty cities was \$10.69 at the beginning of November as compared with \$10.65 for October; \$10.29 for November, 1922; \$11.08 for November, 1921; \$16.92 for June, 1920 (the peak); and \$7.96 for November, 1914. Eggs were substantially higher in price while there were smaller increases in the prices of cheese, butter, milk, sugar, prunes, and lard. Potatoes showed the largest decline but smaller decreases occurred in the prices of beef, mutton, fresh and salt pork, bacon, and evaporated apples. Including the cost of fuel and rent with that of foods the total budget averaged \$21.19 at the beginning of November as compared with \$21.16 for October; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.92 for July, 1920 (the peak); and \$14.36 for November, 1914. Fuel and rent showed little change.

The movement of wholesale prices as indicated by the index number of the Bureau of Statistics was very slight, being somewhat higher, however, than the levels reached in October. Based upon average prices in 1913 as 100 the index stood at 153.3 for November as compared with 153.1 for October; 149.6 for November, 1922; 153.6 for November, 1921; 256.9 for May, 1920 (the peak). In the grouping according to chief component material the Vegetable Products group, the Non-Metallic Minerals group, and the Chemicals group were each lower while the other five

main groups were higher, the greatest advances being in the Animals group and the Textile group.

The index number based upon prices of 271 commodities in 1890-1899 as 100 published by the Department of Labour since 1910 showed little change at 221.7 for November as compared with 221.2 for October; 221.7 for November, 1922; 227.3 for November, 1921; 356.6 for May, 1920; and 137.5 for November, 1914. The most important declines occurred in the prices of fodder, livestock and meat, cheese, vegetables, flour, sugar, silk, pig iron, linseed oil and turpentine, and smaller declines in grains, gasoline, and in raw furs. The principal advances occurred in the prices of eggs, butter, fruits, glucose, raw cotton, and smaller increases in some grains, molasses, tapioca, some metals, spruce, and in red lead.

The special index of fifty commodities selected from the 271 in the Departmental list showed little change at 152.0 for November as compared with 151.9 for October; 152.1 for November, 1922.

The index number calculated by the Canadian Bank of Commerce based upon prices 1909 to 1913 as 100 was again slightly lower at 155.70 for November as compared with 151.94 for October. The indexes of both imports and exports were lower. Professor Michell's index of forty articles advanced from 174.2 for October to 176.9 for November. Both foods and manufacturers' goods advanced.

# CANADIAN IMPORTS AND EXPORTS DURING OCTOBER, 1923

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of October, 1922 and 1923, and for the seven months ending October of these years, and the exports, do-

mestic and foreign, of similar classes of goods for the same periods.

The following table shows the imports free and dutiable entered for home consumption, and the exports domestic and foreign, of the various classes of products, for the month of October, 1923:

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
Agricultural and vegetable products, mainly foods..	1,760,256	9,186,660	41,004,520	62,206
Agricultural and vegetable products, other than foods .....	1,935,232	2,645,484	3,731,971	60,081
Animals and animal products.....	1,451,135	2,156,681	15,908,476	173,111
Fibres, textiles, and textile products.....	4,313,884	9,558,997	551,948	97,979
Wood, wood products and paper.....	1,397,729	2,320,654	23,952,740	26,824
Iron and its products.....	1,550,708	12,120,589	6,322,528	284,016
Non-ferrous metals and their products.....	894,242	2,830,048	2,897,129	40,482
Non-metallic minerals and products.....	7,167,015	6,627,443	2,640,709	56,083
Chemicals and allied products.....	1,237,388	1,389,908	1,215,258	18,016
Miscellaneous commodities.....	2,974,605	2,771,996	1,898,550	357,271
Totals .....	24,732,194	51,608,460	100,123,829	1,176,074

In October, 1923, the duty collected amounted to \$11,753,696 as compared with \$11,347,737 in October 1922.

The following comparative table shows the value of merchandise entered for

consumption, and the merchandise, domestic and foreign, exported in the months of October, 1922 and 1923, and in the seven months ending October of these years respectively:

	Month of October		Seven months ending October	
	1922	1923	1922	1923
	\$	\$	\$	\$
Merchandise entered for consumption.....	66,875,201	76,340,654	430,790,937	540,670,971
Merchandise, domestic, exported.....	102,675,347	100,123,829	490,908,643	553,893,269
Total .....	169,550,548	176,464,483	921,699,580	1,094,564,240
Merchandise, foreign, exported.....	1,229,706	1,176,074	8,455,554	8,437,367
Grand total, Canadian trade.....	170,780,254	177,640,557	930,155,134	1,103,001,607

**PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION  
ACT, 1907, DURING THE MONTH OF NOVEMBER, 1923.**

---

**D**URING the month of November, 1923, the Department received a report of a Board of Conciliation and Investigation appointed to deal with a dispute between various shipping companies, trading to the Port of St. John, N.B., and certain of their employees being members of the International Longshoremen's Association, Local 273 (General Longshore Workers).

**Applications received**

During the month three applications for the establishment of Boards of Conciliation and Investigation were received. All three applications were from various shipping companies trading to the Port of St. John, N.B. and had reference to disputes with certain of their employees at St. John being respectively:

- (1) Members of International Longshoremen's Association, Local 273 (General Longshore Workers); (2)

members of International Longshoremen's Association, Local 810 (Coal Handlers' Union); and (3) members of International Longshoremen's Association, Local 1039 (Ship Liners).

In the case of the application concerning the dispute with members of the General Longshore Workers' Union, Local 273, a Board was established and the following members were appointed: Mr. E. McG. Quirk, Montreal, chairman, appointed in the absence of a recommendation from the other two members, Messrs. Bernard Rose, K.C., Montreal, and Joseph Monteith, St. John, nominees of the employers and employees respectively.

In the case of the other two disputes concerning the Coal Handlers' Union, Local 810, and the Ship Liners, Local 1039, of the International Longshoremen's Association, settlements were reached with the shipping companies by direct negotiation and consequently no Board was established.

**Report of Board in dispute between various steamship companies and certain  
of their employees at St. John, N. B.**

A report was received from the Board established to deal with a dispute between various shipping companies and certain of their employees at St. John, N.B., being members of the International Longshoremen's Association, Local 273 (General Longshore Workers). The Board, which was constituted as stated above, presented a unanimous report that contained recommendations for the settlement of the dispute.

These recommendations were accepted by both parties to the dispute.

The text of the report is as follows:

**Report of Board**

St. John, N.B.,

November 30th, 1923.

Honourable

James Murdock, M.P.,  
Minister of Labour,  
Ottawa.

*Re* dispute between Anchor-Donaldson Line, Limited; Canada Steamship Lines, Limited; Canadian Government Merchant Marine, Limited; Canadian Pacific Steamships, Limited; Cunard Line; Donaldson Line, Limited; Elder, Dempster & Company, Limited; Ellerman-Buck-

nall Steamship Company, Limited; Furness, Withy & Company, Limited; McLean Kennedy, Limited; J. T. Knight & Company; New Zealand Shipping Company, Limited; The Robert Reford Company, Limited; The Royal Mail Steam Packet Company, and William Thomson & Company, Limited; and Local No. 273, International Longshoremen's Association, General Longshore Workers of the Port of St. John, N.B.

Sir,

The members of the Board appointed by you under date of November 17, consisting of Mr. Bernard Rose, K.C., nominated by the employers, Mr. Joseph Monteith, representing the employees, and Mr. E. McG. Quirk, appointed in the absence of joint recommendation, Chairman, have the honour to report as follows:

The Board had its preliminary session on Tuesday, 27th day of November, and sat on the 28th, 29th and 30th November. The Shipping Interests were represented by Mr. Thomas Robb, Secretary and General Manager of the Shipping Federation of Canada; Captain J. T. Walsh, of Canadian Pacific Steamships, Limited, and Mr. H. C. Schofield. The Longshoremen were represented by Messrs. J. E. Tighe, Vice-President of the International Longshoremen's Association, Mr. John McKinnon, Business Agent, and Mr. M. P. Donovan.

The sessions were held in the Board of Trade Building, St. John.

The Board, accompanied by representatives of the parties to the dispute, visited and made close inspection of the docks and sheds of the harbour, east and west side.

Statements were made by the respective parties as to the matters in dispute, which concerned wages and certain working conditions.

The Board was surprised to note that in one of the wharves belonging to the

City of St. John the lighting facilities are not only wholly inadequate, but in addition dangerous to life. The matter is one which the Board feel justified in calling to the attention of the authorities of the City of St. John and urgently recommending prompt action be taken with a view of installing a number of lights in the shed, not less than those which are provided at the Government sheds.

The sanitary facilities on the wharves belonging to the City of St. John are by no means what they should be, nor has any effort been made to provide quarters where the men employed can go and get their food heated and partake of same. The absence of such facilities no doubt works a hardship upon these men. They believe that the least that should be done is to furnish light, sanitary facilities, rest and food huts up to the standard maintained in Government shed No. 16. It trusts that the recommendation it makes in this regard will be acted upon without delay by the authorities that have the power to make the necessary changes.

It desires likewise to place on record its pleasure in learning of the excellent relations that exist between the shipping interests and the longshoremen of the Port of St. John. It was evident to the Board that both endeavour at all times to maintain the best of relations and it believes that the recommendations it makes and the rates of wages which it incorporates in this award are fair to the parties and should constitute the agreement between them for the period commencing the 1st of December and continuing for twelve months.

They unanimously agree that the following shall be the wages and working conditions for the above mentioned period:

1. The rates of wages shall be sixty-five (65c.) per hour, day or night, for handling general cargo, and seventy-five cents (75c.) per hour, day or night, for handling bulk grain.

2. (a) Same men not to be ordered back to work either day or night while other men are available except when ship is within reasonable time of finishing or shifting from berth to berth.

(b) if any gang is required to work through the meal hour, double time shall be allowed at the prevailing rate of wages for such meal hour and for such time thereafter until relieved.

3. Nine (9) hours shall constitute a day's or night's work.

4. The prevailing rate of wages to be paid for rigging and unrigging of gear, hauling staging, handling hatches, handling baggage from ship's hold to dock and also for handling ship's lines when docking or shifting ship.

5. When men are ordered out at 1 a.m. they must be paid full rate until the loading of the ship is complete, but not less than two hours. Meal hours from midnight to 1 a.m., noon to 1 p.m., 5 to 7 p.m. and 5 to 7 a.m.

Two hours' pay to be allowed, day or night, from time men ordered out and reporting for work except when weather conditions prevent working. Orders for men to work for 7 a.m. to be given at or before 5 p.m. on the day previous. It required for 9 a.m., orders to be given as soon after 7 a.m. as possible. If required for 1 p.m., orders to be given before 11 a.m. If required for 7 p.m., orders to be given at or before 4 p.m.

6. Double time at the prevailing rate of wages if men are required to work on Sundays or the following holidays, viz., Dominion Day, New Year's Day, Good Friday, Christmas Day, Victoria Day and King's Birthday, and that these Sundays and holidays shall constitute twenty-four hours from midnight to midnight.

Should any of these holidays fall on a Sunday and the following Monday be declared a holiday by the Government, such Monday shall be considered a holiday under this section.

Saturday half-holiday shall prevail from 1st June to 30th September, but men agree to unload mails and baggage at double time rates.

7. No work to be performed on Labour Day except handling mails and baggage, when double time shall be paid.

8. Ten (10) cents per hour extra to be paid for sulphur in bulk and salt in bulk, also wet hides in bundles on week days, day or night.

9. Any ship taking nothing else but deals after the discharge of her cargo shall be termed a deal boat. Any ship taking general cargo and deals shall be termed a cargo boat.

10. Fifteen (15) men to constitute a gang for loading and discharging cargo boats except in the case of bulk coal or bulk cargoes of

salt, sulphur or maize, overside into scows or carts or cars, when the number of men per gang shall be thirteen (13), extra two men to be otherwise employed, and in the case of deal boats the number of men per gang shall not be less than twelve (12), except when working two winches at a hatch, then an extra man shall be employed, making thirteen (13) in deal gang.

Not less than six (6) men to be employed in the hold of a deal boat when loading lumber out of lighters or cars.

11. No man shall stay in the hole of any ship or vessel while grain is running.

12. All orders to the men must be issued through their respective foremen.

13. All freight, when trucked outside between sheds, must have two men on truck.

14. When working out of one hatch and working winch of another hatch, to handle same a man must be placed near the winchman to pass word from the hatchman to the winchman.

15. In the event of any dispute arising it is agreed and understood that the matter shall be taken up by the parties through a representative of the longshoremen and a representative of the shipping interests and every endeavour made to adjust the difficulty promptly to the satisfaction of the parties.

16. This schedule and working conditions to become effective December the First, 1923, and to continue in force until December the First, 1924, and thereafter from year to year unless or until either party serve notice on the other party to the contrary at least thirty days prior to the date above mentioned or prior to the first day of December of any subsequent year.

17. Schedule of the working conditions is appended hereto and forms part of this agreement.

The whole respectfully submitted.

(Signed) E. McG. QUIRK,

Chairman.

(Signed) BERNARD ROSE,

Representative of Employers.

(Signed) JOSEPH MONTEITH,

Representative of Employees.

SCHEDULE OF WORKING CONDITIONS FOR THE  
HANDLING OF CARGO AT THE PORT  
OF SAINT JOHN, REFERRED TO IN  
AGREEMENT AS CLAUSE 17.

Pine and/or spruce deals per sling 14 pieces  
3 inch.

Pine and/or spruce deals per sling 16 pieces  
2 inch.

Where spruce and/or pine scantling or deals shall be slung together not less than the equivalent of fourteen (14) of 3 inch deals.

Pine and/or spruce 1 inch 31 pieces per sling.

Pine and/or spruce scantling 20 pieces per sling.

Pine and/or spruce deal ends 30 pieces per sling.

Sawn birch	per sling	8 pieces	4 inch
" "	" "	10 "	5 "
" "	" "	15 "	2 "
" "	" "	20 "	1 "

Not less than 12 men in gang.

Laths per sling; 20 bundles of 100 laths per bundle.

Flour 140 lbs. sacks	10 per sling	5 per truck
" 280 " "	5 " "	2 " "
" 98 " "	15 " "	5 " "

Pig iron large 10 pieces per sling, 10 pieces per truck.

Pig iron small 15 pieces per sling, 25 pieces per truck.

Salt in sacks, 5 sacks per sling, 5 sacks per truck, when stacked in shed or when stacked outside of shed two men per truck; when discharged and stowed into decked vessels 7 sacks per sling, and when discharged into open scows

9 sacks per sling and not less than six (6) men in steamer's hold to sling same.

Coal in bags, 5 bags per sling, 5 bags per truck, when stacked in shed or when stacked outside of shed two (2) men per truck; when discharged and stowed into decked vessels 7 bags per sling, and when discharged into open scows 9 sacks per sling and not less than six (6) men in steamer's hold to sling same.

Oilcake in bags 6 per sling, 3 per truck.

Oilcake in bales 4 per sling 2 per truck.

Axles large 1 per sling 1 per truck.

Axles small 2 per sling 2 per truck.

Axles small 2 per sling 2 per truck.

Car rims, one (1) shall constitute a sling whether large or small.

Apples in barrels 6 per sling 3 per truck.

Potatoes in barrels 6 per sling 3 per truck.

Potatoes in bags 6 per sling 3 per truck.

Raw sugar in bags 5 per sling at refinery.

Raw sugar in bags 4 per sling, 4 per truck at all other wharves.

Hay, 6 bales per sling.

No sling of flour, beans, peas or other cereals in bags to exceed 1,400 lbs.

(Signed) E. McG. QUIRK.

(Signed) B. R.

## STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1923

THE number of strikes and lockouts in Canada in existence at some time or other during the month of November was two more than in October. The time loss for November was greater than in November, 1922, being 64,000 working days as compared with 48,023 working days lost in the corresponding month of the previous year.

Date	Number of disputes	Number of employees involved	Time lost in working days
November, 1923.....	17	2,651	64,000
October, 1923.....	15	2,497	55,994
November, 1922.....	14	2,036	48,023

Fifteen disputes involving 2,403 workpeople were carried over from

October. One of the strikes commencing prior to November and one strike commencing during November terminated during the month. At the end of November, therefore, there were on record 15 strikes: coal miners, Edson, Alta.; clothing workers, Winnipeg; photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing compositors at Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver; motormen and conductors, Niagara Falls; longshoremen along the Miramichi River, N.B., and longshoremen at Vancouver and other British Columbia ports.

A cessation of work for five hours occurred at Port Arthur on November 19 where 30 men engaged in repairing grain doors struck for an increase in wages, but work was resumed the next day under the same conditions as before.

One strike listed in the statistical table was reported to the Department for the first time during November, although the date of commencement was September 6.

The two strikes which terminated during November resulted in favour of the employees. Of the two disputes commencing during the month one was for increased wages and the other against a reduction in wages and increased hours.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one day's duration or less, and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

**COAL MINERS, EDSON, ALTA.** — On November 23, a strike of 240 coal miners occurred at Edson, Alta., for recognition of the union. At the end of November the strike was still in existence.

**CLOTHING WORKERS, WINNIPEG, MAN.** — A strike of 23 clothing workers occurred at Winnipeg on September 6th against a reduction in wages. The proposed decrease amounted to from three dollars per week to seven dollars per week. At the end of November this strike remained unterminated.

**PRINTING TRADES IN TEN CITIES.** — The strikes of printing trades in job offices in various centres, which began in the spring and early summer of 1921, for the 44-hour week, were still in progress in ten cities and involved 561 employees with a time loss of 14,586 working days.

**STONECUTTERS, OTTAWA, ONT.** — A strike of eight stonecutters took place on November 7 for increased wages. The previous rate was 85 cents per hour while the rate demanded was \$1 per hour. Negotiations were carried on as a result of which the increase was granted and work was resumed November 10.

**HOTEL AND RESTAURANT EMPLOYEES, CALGARY, ALTA.** — Information was received in the Department of the settlement on November 15 of a strike of waiters and waitresses in a café in Calgary which commenced on April 12. The strike occurred as the result of a proposal to reduce rates of wages and increase the hours of labour per week. At the end of three weeks all the strikers had secured work elsewhere. On November 15 the proprietor of the café concerned signed an agreement with the union, the terms of which were the same as prior to the strike.

**LONGSHOREMEN, VANCOUVER, ETC.** — The strike of longshoremen at Vancouver and certain other Pacific coast ports which began in October continued throughout November. Towards the end of the month through the mediation of the resident Dominion Fair Wages Officer, negotiations were resumed.

## STRIKES AND LOCKOUTS DURING NOVEMBER, 1923.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and lockouts commencing prior to November, 1923.</b>			
<b>MANUFACTURING—</b>			
<i>Clothing:</i>			
Clothing workers, Winnipeg, Man.	23	598	Commenced September 6, against a reduction in wages. Unterminated.
<i>Printing and Publishing:</i>			
Photo engravers, Montreal, Que.	7	182	Commenced May 2, 1921. For shorter hours. Unterminated.
Printing compositors, Hamilton, Ont.	10	260	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Unterminated.
Printing compositors, Montreal, Que.	10	260	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Unterminated.
Printing compositors, Montreal, Que.	140	3,640	Commenced July 1, 1921. For increased wages and 44-hour week. Unterminated.
Printing compositors, Montreal, Que.	12	312	Commenced September 15, 1922. Employer refused to negotiate a new agreement with the union. Unterminated.
Printing compositors, Toronto, Ont.	276	7,176	Commenced June 1, 1921. For increased wages and 44-hour week. Unterminated.
Printing compositors, Winnipeg, Man.	43	1,118	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Unterminated.
Printing compositors, and pressmen, Halifax, N. S.	24	624	Commenced May 2, 1921. For shorter hours with same weekly pay. Unterminated.
Printing compositors and pressmen, Ottawa, Ont.	28	728	Commenced June 1, 1921. For increased wages and 44-hour week. Unterminated.
Printing compositors and pressmen, Vancouver, B. C.	11	286	Commenced May 2, 1921. For increased wages and 44-hour week. Unterminated.
<b>TRANSPORTATION—</b>			
<i>Street and Electric Railways:</i>			
Motormen and conductors, Niagara Falls, Ont.	7	182	Commenced July 2, 1922. For recognition of union. Unterminated.
<i>Water transportation:</i>			
Longshoremen, Miramichi, N.B.	250	6,500	Commenced July 9, for increased wages and shorter hours. Unterminated.
Longshoremen, Vancouver, Victoria, New Westminster, Chemainus and Alberni, B.C.	1,555	40,430	Commenced October 9, for increased wages and alteration in working conditions. Unterminated.
<b>SERVICE—</b>			
<i>Personal and Domestic:</i>			
Restaurant employees, Calgary, Alta.	7	.....	Commenced April 12, against a reduction in wages and increased hours. Strikers secured work els where and on November 15th conditions prior to the strike were restored.
<b>(b) Strikes and lockouts commencing during November, 1923.</b>			
<b>MINING, NON-FERROUS, SMELTING AND QUARRYING—</b>			
Coal miners, Edson, Alta.	240	1,680	Commenced November 23, for recognition of the Union. Unterminated.
<b>MANUFACTURING—</b>			
<i>Stone-Sawing, Cutting and couper dressing:</i>			
Stonecutters, Ottawa, Ont.	8	24	Commenced November 7, for increased wages. After negotiations work was resumed November 10.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING OCTOBER, 1923.

THE British *Ministry of Labour Gazette* for November contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland during October, 1923, based upon returns from employers and employees.

**NUMBER, MAGNITUDE AND DURATION.** The number of trade disputes involving a stoppage of work, reported to the Department as beginning in October in Great Britain and Northern Ireland, was 41, as compared with 29 in the previous month, and 32 in October, 1922. In these new disputes about 12,000 workpeople were directly involved and 1,000 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition, about 43,000 workpeople were involved, either directly or indirectly, in 18 disputes which began before October and were still in progress at the beginning of that month. The number of new and old disputes was thus 59, involving about 56,000 workpeople, and resulting in a loss during October of about 1,167,000 working days.

The principal dispute in progress was that involving members of the United Society of Boilermakers and Iron and Steel Shipbuilders in federated shipyards. This dispute, which began on April 30, continued throughout October.

**CAUSES.** — Of the 41 disputes beginning in October, 9, directly involving 1,000 workpeople, arose out of demands for advances in wages; 5, directly involving 1,000 workpeople, against proposed reductions in wages; 12, directly involving 6,000 workpeople, on other wages questions; 5, directly involving 2,000 workpeople, on questions respect-

ing the employment of particular classes or persons; and 10, directly involving 2,000 workpeople, on other questions.

**RESULTS.** — Settlements were effected during October in the case of 29 new disputes, directly involving 10,000 workpeople, and 10 old disputes, directly involving 1,000 workpeople. Of these new and old disputes, 8, directly involving 2,000 workpeople, were settled in favour of the workpeople; 18, directly involving 6,000 workpeople, were settled in favour of the employers; and 13, directly involving 3,000 workpeople, were compromised. In the case of 4 disputes, directly involving 1,000 workpeople, work was resumed pending negotiations.

The following table analyses the disputes in progress in October in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during the month in all disputes in progress:

Groups of Industries	Number of disputes in progress in October			Number of workpeople involved in all disputes in progress in Oct.	Aggregate duration of all working days of all disputes in progress in October
	Started before Oct., 1st	Started in October	Total		
Building .....	2	....	6	1,000	9,000
Mining and quarrying .....	4	10	14	9,000	16,000
Metal, engineering and shipbuilding	4	7	11	42,000	1,096,000
Transport .....	1	3	4	1,000	20,000
Other trades.....	7	17	24	3,000	26,000
Total, Oct. 1923..	18	41	59	56,000	1,167,000
Total, Sept., 1923.	23	29	57	54,000	1,029,000
Total, Oct. 1922..	25	32	57	14,000	186,000

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Fifth Session of the International Labour Conference.

**T**HE Fifth Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held in Geneva, Switzerland, from October 22 to October 29.

The objects for which the International Labour Organization was formed, are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreement. The four previous annual sessions of the Conference were held as follows: Washington, D.C., 1919 (see LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (see LABOUR GAZETTE, October, 1920); Geneva, Switzerland, 1921 (see LABOUR GAZETTE, January, 1922); Geneva, Switzerland, 1922 (see LABOUR GAZETTE, December, 1922).

A bulletin of general information in reference to the International Labour Organization was published as a supplement to the February, 1922, issue of the LABOUR GAZETTE.

Under the terms of the Treaties of Peace each State adhering thereto is entitled to four delegates to the International Labour Conference, two of whom shall be Government delegates and the two others shall be delegates representing, respectively, the employers and the work people of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate is entitled to be accompanied by advisers not exceeding two in number. It is also provided in the Treaties that the decisions of the Conference may take the form of either a Recommendation or a Draft International Convention. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft

Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action".

#### Countries represented.

Of the fifty-seven countries who are members of the International Labour Organization, forty-two countries in all were represented at the 1923 Conference as follows:—

Albania	Ireland
Argentine Repub.	Italy
Australia	Japan
Austria	Kingdom of the
Belgium	Serbs, Croats and
Brazil	Slovenes
Bulgaria	Latvia
Canada	Lithuania
Chile	Netherlands
China	Norway
Columbia	Paraguay
Cuba	Persia
Czecho-Slovakia	Poland
Denmark	Portugal
Esthonia	Roumania
Finland	Siam
France	Spain
Germany	Sweden
Great Britain	Switzerland
Greece	South Africa
Hungary	Uruguay
India	Venezuela

### Canadian Delegation.

The Canadian delegation in attendance at the Conference was as follows:

*Government Delegates:* The Honourable Philippe Roy, Commissioner General for Canada in France; Miss Caroline Carmichael, President, National Council of Women of Canada.

*Advisers:* Mrs. James Carruthers (Violet Markham, London, England); Mr. William C. Noxon, Agent-General for the Province of Ontario in London; Mr. Edward McGrath, Secretary of the Labour Office of the Province of Manitoba.

*Employers' Delegate:* Mr. J. H. Sherard, Chairman of the Board of Directors of Simmons Limited, Montreal.

*Workers' Delegate:* Mr. Tom Moore, President of the Trades and Labour Congress of Canada.

Of the 122 delegates to the Conference 74 were appointed on behalf of Governments, 24 on behalf of employers and 24 on behalf of workers. There were besides 70 technical advisers in attendance of whom 38 were appointed on behalf of the Governments, 14 on behalf of the employers and 18 on behalf of the workers.

The Conference elected as President, His Excellency Dr. Mineichiro Adatchi, Japanese Government delegate on the Governing Body of the International Labour Office. Messrs. H. Pfister (delegate of the Swiss Government), G. Olivetti (Italy, delegate of the employers), Leon Jouhaux (France, delegate of the workers), were elected Vice-Presidents. Monsieur Albert Thomas, Director of the International Labour Office, acted as Secretary-General of the Conference.

### Agenda of the Conference.

The Agenda of the Conference comprised only one subject, namely, "General Principles for the Organization of Factory Inspection".

In its report on "General Principles for the Organization of Factory Inspec-

tion", the International Labour Office submitted for the consideration of the Conference a draft Recommendation, consisting of a preamble and four parts, viz: (1) Sphere of inspection; (2) Nature of the functions and powers of inspectors; (3) Organization of inspection; (4) Inspectors' reports.

The Conference decided to take this draft as the basis of discussion and to appoint committees to deal with these four questions. In addition, a separate committee was appointed to deal with the special question of safety. The preamble of the draft Recommendation was dealt with by the Selection Committee.

The Committee made a close examination of the Recommendation which had been drafted by the International Labour Office and various changes were proposed therein. The text of the Recommendation which was adopted unanimously by the Conference is appended to the present article.

### The Director's Report.

In view of the fact that the present session was a short one and was to be followed by the Sixth Session after less than the usual interval (in June 1924) the report submitted by the Director of the International Labour Office did not go into such detail as the reports which had been submitted to previous sessions of the Conference. In conformity with Article 408 of the Treaty of Versailles, however, it included the annual reports which the States Members of the International Labour Organization undertake to make to the International Labour Office on the measures taken to give effect to the Conventions which they have adopted.

Since October 1922 there has been a large increase in the number of ratifications in spite of the difficulties connected with the economic crisis and the political situation. The number of ratifications communicated to the Secretary-General of the League of Nations has increased by 35 (from 51 to 86)

while the number of ratifications authorized but not yet communicated has risen from 16 to 23, making alto-

gether 109 ratifications which have either been communicated or authorized up to the present.

#### Resolutions adopted by the Conference.

The Conference adopted the following resolutions:

##### Automatic couplings.

The Fifth Session of the International Labour Conference, considering the importance for the safety of railway workers of questions relating to automatic couplings, requests the Governing Body to obtain information from Governments and from international, technical and industrial organizations upon the question of automatic couplings, in order to decide whether an international agreement in the matter is desirable in the interests of the workers.

##### The question of a special inspection system for the mercantile marine.

The Conference requests the Governing Body to consider the possibility of inscribing on the Agenda of a forthcoming Session of the Conference the institution of a special inspection system for the mercantile marine distinct from the industrial inspection system.

##### Local Labour organisations in the Saar Basin

The Conference after having taken note of Article 23, paragraph 4, of Chapter II of

the Annex to the section of the Treaty of Versailles concerning the Saar Basin, which provides that in fixing the conditions and hours of labour for men, women and children, the Governing Commission is to take into consideration the wishes expressed by the local labour organisations, as well as the principles adopted by the League of Nations,

Considering that this paragraph can only refer to the principles laid down in the Preamble of Part XIII and in Article 427 of the said Treaty of Peace, and that it is the duty of the International Labour Organisation to work for the realisation of these principles,

Requests the Governing Body to consider whether relations should be entered into through the Secretary-General with the Council of the League of Nations in order to consider by what measure satisfaction can constitutionally be given to the local organisations of the Saar and how the International Labour Office can place itself at the disposal of the Governing Commission in order to secure the application of the principles adopted by the League of Nations.

#### Recommendation concerning the General Principles for the Organisation of Systems of Inspection to Secure the Enforcement of the Laws and Regulations for the Protection of the Workers.

The text of the Recommendation on this subject, which was adopted unanimously by the Conference, is as follows:

The General Conference of the International Labour Organisation of the League of Nations:

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Fifth Session on 22 October 1923, and

Having decided upon the adoption of certain proposals with regard to the general principles for the organisation of factory inspection, the question forming the agenda of the Session, and

Having determined that these proposals should take the form of a recommendation, adopts, this twenty-ninth day of October of the year one thousand nine hundred and twenty-three, the following Recommendation, to be submitted to the Members of the International Labour Organisation for consideration with a view to effect being given to it

by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding parts of the other treaties of peace.

Whereas the Treaty of Versailles and the other treaties of peace include among the methods and principles of special and urgent importance for the physical, moral and intellectual welfare of the workers the principle that each State should make provision for a system of inspection in which women should take part, in order to ensure the enforcement of the laws and regulations for the protection of the workers;

Whereas the resolutions adopted at the First Session of the International Labour Conference concerning certain countries where special conditions prevail involve the creation by these countries of an inspection system if they do not already possess such a system;

Whereas the necessity of organising a system of inspection becomes specially urgent when Conventions adopted at Sessions of the

Conference are being ratified by Members of the Organisation and put into force;

Whereas, while the institution of an inspection system is undoubtedly to be recommended as one of the most effective means of ensuring the enforcement of Conventions and other engagements for the regulation of labour conditions, each Member is solely responsible for the execution of Conventions to which it is a party in the territory under its sovereignty or its authority and must accordingly itself determine in accordance with local conditions what measures of supervision may enable it to assume such a responsibility;

Whereas, in order to put the experience already gained at the disposal of the Members with a view to assisting them in the institution or re-organisation of their inspection system, it is desirable to indicate the general principles which practice shows to be the best calculated to ensure uniform, thorough and effective enforcement of Conventions and more generally of all measures for the protection of the workers; and

Having decided to leave to each country the determination of how far these general principles should be applied to certain spheres of activity;

And taking as a guide the long experience already acquired in factory inspection;

The General Conference recommends that each Member of the International Labour Organisation should take the following principles and rules into consideration:

### I. Sphere of Inspection

1. That it should be the principal function of the system of inspection which should be instituted by each Member in accordance with the ninth principle of Article 427 of the Treaty of Versailles to secure the enforcement of the laws and regulations relating to the conditions of work and the protection of the workers while engaged in their work (hours of work and rest; night work; prohibition of the employment of certain persons on dangerous, unhealthy or physically unsuitable work; health and safety; etc.)

2. That, in so far as it may be considered possible and desirable, either for reasons of convenience in the matter of supervision or by reason of the experience which they gain in carrying out their principal duties, to assign to inspectors additional duties which may vary according to the conceptions, traditions and customs prevailing in the different countries, such duties may be assigned, provided:

(a) that they do not in any way interfere with the inspectors' principal duties;

(b) that in themselves they are closely related to the primary object of ensuring the

protection of the health and safety of the workers;

(c) that they shall not prejudice in any way the authority and impartiality which are necessary to inspectors in their relations with employers and workers.

### II. Nature of the Functions and Powers of Inspectors

#### A. General.

3. That inspectors provided with credentials should be empowered by law:

(a) to visit and inspect, at any hour of the day or night, places where they may have reasonable cause to believe that persons under the protection of the law are employed, and to enter by day any place which they may have reasonable cause to believe to be an establishment, or part thereof, subject to their supervision; provided that, before leaving, inspectors should, if possible, notify the employer or some representative of the employer of their visit;

(b) to question, without witnesses, the staff belonging to the establishment, and, for the purpose of carrying out their duties, to apply for information to any other persons whose evidence they may consider necessary, and to require to be shown any registers or documents which the laws regulating conditions of work require to be kept.

4. That inspectors should be bound by oath, or by any method which conforms with the administrative practice or customs in each country, not to disclose, on pain of legal penalties or suitable disciplinary measures, manufacturing secrets and working processes in general which may come to their knowledge in the course of their duties.

5. That, regard being had to the administrative and judicial systems of each country, and subject to such reference to superior authority as may be considered necessary, inspectors should be empowered to bring breaches of the laws, which they ascertain, directly before the competent judicial authorities;

That in countries where it is not incompatible with their system and principles of law, the reports drawn up by the inspectors should be considered to establish the facts stated therein in default of proof to the contrary.

6. That the inspectors should be empowered, in cases where immediate action is necessary to bring installation or plant into conformity with laws and regulations, to make an order (or, if that procedure should not be in accordance with the administrative or judicial systems of the country, to apply to

the competent authorities for an order) requiring such alterations to the installation or plant to be carried out within a fixed time as may be necessary for securing full and exact observance of the laws and regulations relating to the health and safety of the workers;

That in countries where the inspector's order has executive force of itself, its execution should be suspended only by appeal to a higher administrative or judicial authority, but in no circumstances should provisions intended to protect employers against arbitrary action prejudice the taking of measures with a view to the prevention of imminent danger which has been duly shown to exist.

#### B. Safety.

7. Having regard to the fact that, while it is essential that the inspectorate should be invested with all the legal powers necessary for the performance of its duties, it is equally important, in order that inspection may progressively become more effective, that, in accordance with the tendency manifested in the oldest and most experienced countries, inspection should be increasingly directed towards securing the adoption of the most suitable safety methods for preventing accidents and diseases with a view to rendering work less dangerous, more healthy, and even less exhausting, by the intelligent understanding, education and co-operation of all concerned, it would appear that the following methods are calculated to promote this development in all countries:

(a) that all accidents should be notified to the competent authorities and that one of the essential duties of the inspectors should be to investigate accidents, and more especially those of a serious or recurring character, with a view to ascertaining by what measures they can be prevented;

(b) that inspectors should inform and advise employers respecting the best standards of health and safety;

(c) that inspectors should encourage the collaboration of employers, managing staff and workers for the promotion of personal caution, safety methods, and the perfecting of safety equipment;

(d) that inspectors should endeavour to promote the improvement and perfecting of measures of health and safety, by the systematic study of technical methods for the internal equipment of undertakings, by special investigations into problems of health and safety, and by any other means;

(e) that in countries where it is considered preferable to have a special organisation for accident insurance and prevention completely independent of the in-

spectorate, the special officers of such organisations should be guided by the foregoing principles.

### III. Organisation of Inspection

#### A. Organisation of the staff.

8. That, in order that the inspectors may be as closely as possible in touch with the establishments which they inspect and with the employers and workers, and in order that as much as possible of the inspectors' time may be devoted to the actual visiting of establishments, they should be localized, when the circumstance of the country permit, in the industrial districts.

9. That, in countries which for the purposes of inspection are divided into districts, in order to secure uniformity in the application of the law as between district and district and to promote a high standard of efficiency of inspection, the inspectors in the districts should be placed under the general supervision of an inspector of high qualifications and experience. Where the importance of the industries of the country is such as to require the appointment of more than one supervising inspector, the supervising inspectors should meet from time to time to confer on questions arising in the divisions under their control in connection with the application of the law and the improvement of industrial conditions.

10. That the inspectorate should be placed under the direct and exclusive control of a central State authority and should not be under the control of or in any way responsible to any local authority in connection with the execution of any of their duties.

11. That, in view of the difficult scientific and technical questions which arise under the conditions of modern industry in connection with processes involving the use of dangerous materials, the removal of injurious dust and gases, the use of electrical plant and other matters, it is essential that experts having competent medical, engineering, electrical or other scientific training and experience should be employed by the State for dealing with such problems.

12. That, in conformity with the principle contained in Article 427 of the Treaty of Peace, the Inspectorate should include women as well as men inspectors; that, while it is evident that with regard to certain matters and certain classes of work inspection can be more suitably carried out by men, as in the case of other matters and other classes of work inspection can be more suitably carried out by women, the women inspectors should in general have the same powers and duties and exercise the same authority as the men inspectors, subject to their having had the

necessary training and experience, and should have equal opportunity of promotion to the higher ranks.

#### B. Qualifications and training of inspectors.

13. That, in view of the complexity of modern industrial processes and machinery, of the character of the executive and administrative functions entrusted to the inspectors in connection with the application of the law and of the importance of their relations to employers and workers and employers' and workers' organisations and to the judicial and local authorities, it is essential that the inspectors should in general possess a high standard of technical training and experience, should be persons of good general education, and by their character and abilities, be capable of acquiring the confidence of all parties.

14. That the inspectorate should be on a permanent basis and should be independent of changes of Government; that the inspectors should be given such a status and standard of remuneration as to secure their freedom from any improper external influences and that they should be prohibited from having any interest in any establishment which is placed under their inspection.

15. That inspectors on appointment should undergo a period of probation for the purpose of testing their qualifications and training them in their duties, and that their appointment should only be confirmed at the end of that period if they have shown themselves fully qualified for the duties of an inspector.

16. That, where countries are divided for the purposes of inspection into districts, and especially where the industries of the country are of a varied character, it is desirable that inspectors, more particularly during the early years of their service, should be transferred from district to district at appropriate intervals in order to obtain a full experience of the work of inspection.

#### C. Standard and methods of inspection.

17. That, as under a system of State inspection the visits of the inspectors to any individual establishment must necessarily be more or less infrequent it is essential:

(a) That the principle should be laid down and maintained that the employer and the officials of the establishment are responsible for the observance of the law, and are liable to be proceeded against in the event of deliberate violation of or serious negligence in observing the law, without previous warning from the inspector.

It is understood that the foregoing principle does not apply in special cases where the law provides that notice shall be given

in the first instance to the employer to carry out certain measures.

(b) That, as a general rule, the visits of the inspectors should be made without any previous notice to the employer.

It is desirable that adequate measures should be taken by the State to ensure that employers, officials and workers are acquainted with the provisions of the law and the measures to be taken for the protection of the health and safety of the workers, as, for example, by requiring the employer to post in his establishment an abstract of the requirements of the law.

18. That, while it is recognised that very wide differences exist between the size and importance of one establishment and another, and that there may be special difficulties in countries or areas of a rural character where factories are widely scattered, it is desirable that, as far as possible, every establishment should be visited by an inspector for the purposes of general inspection not less frequently than once a year, in addition to any special visits that may be made for the purpose of investigating a particular complaint or for other purposes; and that large establishments and establishments of which the management is unsatisfactory from the point of view of the protection of the health and safety of the workers, and establishments in which dangerous or unhealthy processes are carried on, should be visited much more frequently. It is desirable that, when any serious irregularity has been discovered in an establishment, it should be revisited by the inspector at an early date with a view to ascertaining whether the irregularity has been remedied.

#### D. Co-operation of employers and workers.

19. That it is essential that the workers and their representatives should be afforded every facility for communicating freely with the inspectors as to any defect or breach of the law in the establishment in which they are employed; that every such complaint should as far as possible be investigated promptly by the inspector; that the complaint should be treated as absolutely confidential by the inspector and that no intimation even should be given to the employer or his officials that the visit made for the purpose of investigation is being made in consequence of the receipt of a complaint.

20. That, with a view to securing full co-operation of the employers and workers and their respective organisations in promoting a high standard in regard to the conditions affecting the health and safety of the workers, it is desirable that the inspectorate should confer from time to time with the representatives of the employers' and workers'

organisations as to the best measures to be taken for this purpose.

#### IV. Inspectors' Reports

21. That inspectors should regularly submit to their central authority reports framed on uniform lines dealing with their work and its results, and that the said authority should publish an annual report as soon as possible and in any case within one year after the end of the year to which it relates, containing a general survey of the information furnished by the inspectors; that the calendar year should be uniformly adopted for these reports.

22. That the annual general report should contain a list of the laws and regulations relating to conditions of work made during the year which it covers.

23. That this annual report should also give the statistical tables necessary in order to provide all information on the organisation and work of the inspectorate and on the results obtained. The information supplied should as far as possible state:

(a) The strength and organisation of the staff of the inspectorate;

(b) The number of establishments covered by the laws and regulations, classified by industries and indicating the number of workers employed (men, women, young persons, children);

(c) The number of visits of inspection made for each class of establishment with an indication of the number of workers employed in the establishments inspected (the number of workers being taken to be the number employed at the time of the first visit of the year), and the number of establishments inspected more than once during the year;

(d) The number and nature of breaches of the laws and regulations brought before the competent authorities and the number and nature of the convictions by the competent authority;

(e) The number, nature and the cause of accidents and occupational diseases notified, tabulated according to class of establishment.

## INTERNATIONAL CONFERENCE OF LABOUR STATISTICIANS

Held at Geneva, October 29-November 3, 1923.

**A**N International Conference of Labour Statisticians was held at Geneva, Switzerland, under the auspices of the International Labour Office from October 29 to November 3, 1923. The Conference was held for the purpose of discussing methods of facilitating the exchange of data regarding labour conditions between countries, with reference more particularly to the classification of industries and occupations, the statistics of wages and hours of labour, and the statistics of industrial accidents. Mr. R. H. Coats, Dominion Statistician, attended on behalf of the Government of Canada.

Mr. Coats' report on this gathering was presented to the Minister of Labour on December 15 and is in part as follows:

#### Opening Proceedings

The Conference was opened on October 29, by Mr. Albert Thomas, Director of the International Labour Office, fifty-four delegates

representing thirty-three different countries being present. The Director in addressing the delegates reviewed the progress of international labour statistics under the Office, and dealt in general terms with the agenda of the present Conference, pointing out that reports on the three principal items had been prepared by the Office and distributed to the delegates. The main purpose of the Conference, he stated, was scientific discussion, the findings not being binding, though the supreme object was to arrive at conclusions that would be found workable by the different countries of the world. In conclusion, the Conference was requested to nominate officers to direct its work. In response the Conference unanimously elected Mr. Armand Julin, Secretary General of the Belgian Ministry of Labour and Administration, as President, and Messrs. Coats (Canada), Solinas (Italy), and Platzner (Germany) as Vice-Presidents.

The President, on taking the chair, delivered a valuable address on the origin and development of labour statistics and on the broad principles and methods at present in use in the more important countries. The Conference then divided into committees for the detailed study of the three questions on the agenda, Mr. Hilton (Great Britain) being appointed Chairman of the Committee on the Classification

tion of Industry and Occupations, Mr. Huber (France), Chairman of the Committee on Statistics of Wages and Hours of Labour, and Mr. Bohren (Switzerland), Chairman of the Committee on Statistics of Industrial Accidents. The committees met alternately in so far as was found practicable.

### Resolutions

#### *Classification of Industries and Occupations.*

The Committee held four sittings, and gave very thorough discussion to the intricate and difficult problem of classification. The resolutions originally tabled by the International Labour Office were as a result considerably modified. Full opportunity was afforded in this connection of explaining the system in use in Canada whereby different principles of classification are employed, but no two principles are included within the same category, thus rendering all group totals as comprehensive and accurate as the statistical items will permit, and enabling comparisons to be made between different statistical fields on the same basis. The text of the resolutions as finally passed by the Committee and subsequently adopted at the plenary session of the Conference was as follows:

1. Occupied persons should be classified in the first instance according to the industry in which they are employed, and within each industry they may be further classified according to their individual occupations. When it is not possible to give this double classification in sufficient detail to show the total number of workers in each individual occupation, it is necessary to make a second classification of all occupied persons according to their individual occupations, so that for comparative purposes two separate classifications for all workers will be available (a) by industry and (b) by individual occupation.

#### 2. A. PRIMARY PRODUCTION.

- I. Agriculture and pasturing, forestry, hunting, fishing, etc.

- II. Mining, quarrying, etc., i.e., extraction of minerals.

#### B. SECONDARY PRODUCTION.

- III. Manufacturing industries, etc., i.e., the transformation or modification of materials together with the construction of buildings, roads, etc., and the repair of finished products.

#### C. SERVICES.

- IV. Transport and communication.

- V. Commerce, finance and trade.

- VI. Public administration and defence.

- VII. Professional services.

- VIII. Domestic and personal, i.e., the supply of "board and lodging", and in rendering personal services for which remuneration is paid.

3. In classifying manufacturing industry the establishment, considered as a technical unit, should be taken as basis.

4. In the absence of an agreed classification of industries and as a preparation for such a classification, and in order to facilitate international comparison, the groupings of industries used in the different countries should be so sub-divided that it would always be possible to secure separate information concerning an adequately complete number of industries included in a provisional list drawn up in alphabetical order, which might be prepared by the International Labour Office after consultation with statistical services or any organizations which might usefully assist in this work.

5. It is desirable for purposes of international comparison that each country should publish definitions of the occupational, industrial and other terms most commonly used in that country in connection with its labour statistics.

### *Wages and Hours of Labour.*

The resolutions passed on the recommendation of this Committee, which held three extended sittings, were as follows:

Detailed statistics of rates of wages, of actual earnings and of normal and actual hours of labour should be collected and published in each country as frequently as possible, account being taken of the special circumstances and conditions obtaining in each case. With a view to facilitating international comparisons, the responsible authorities in each country should, as far as practicable, observe the following principles:

- (1) At regular intervals and at least once a year should be published:

- (a) statutory minimum rates;
- (b) rates fixed in collective agreements;
- (c) rates accepted by organizations of employers and workpeople for typical categories of workers.

- (2) In order to provide an indication of the general course of the wage movement, information should be published at more frequent intervals as to the nature and amount of any changes resulting from alterations in the statutory minimum rates or arranged between organizations of employers and workpeople. Particulars should be given of changes in the normal hours of labour and of alterations in the level of piece work rates.

- (3) At regular intervals, not less than once a year, average actual earnings and actual hours of labour during a typical week should be given for each of the principal industries, and based on data supplied by representative employers.

- (4) From the data indicated above, index numbers should be computed to show the

general course of changes in nominal wage rates and in actual earnings. Index numbers of the purchasing power of the wages should also be calculated by relating changes in actual earnings to changes in the cost of living, the necessary precautions being taken to ensure that the two series of data are comparable.

The nominal wages employed in computing the index numbers should be given in every case.

(5) At less frequent intervals general wage censuses should be taken, information being obtained from the pay sheets of employers, to show rates of wages and the actual earnings in a typical week. The information should be given by industries, districts, occupations and sex, and a distinction should be made between adults and young persons.

Until the principles enunciated above have been applied in the different countries, statistics of wages and hours of labour should at least give:

(1) Current rates of wages (hourly or weekly) and normal hours of work of typical categories of time workers; and at regular intervals averages weighted according to the number of workers to whom the data apply both for such categories and for all categories combined.

(2) Actual and full-time earnings and hours of labour of typical categories of workers, especially those paid on piece work. Such statistics should be available for sample periods at least once a year.

(3) Real wage index numbers based on nominal wage and cost of living index numbers.

#### *Industrial Accidents*

The Committee held five sittings and reported the following resolutions, which were accepted by the plenary Conference:

The Conference, believing that it is only by progressive and continued efforts that an international standardization of schemes of statistics of industrial accidents can be obtained; considering it impossible, at least at present, to amend the laws in force in the various countries so as to make it possible to compare the statistics resulting from their provisions, and recognizing that the definition of industrial accident differs in the various countries; adopts the following resolution:

#### *1. Classification of Industrial Accidents:*

Industrial accidents should be classified according to the industry of the injured worker, the cause of accidents, the extent and degree of disability, the location of the injury and the nature thereof.

(a) The classification of industrial accidents according to the *industry of the injured worker* should be in accordance with the general scheme given in the Report on Systems of

Classification of Industries and Occupations with such sub-divisions as will allow special consideration to be given to industries with a relatively high accident rate.

(b) The classification of accidents according to the *cause of accident* should as far as possible be in accordance with the table given below, with such sub-divisions as may be considered necessary.

#### I. Machinery.

- (a) Prime-movers.
- (b) Transmission machinery.
- (c) Lifting machinery.
- (d) Working machinery.

#### II. Transport.

- (a) Railways.
- (b) Ships.
- (c) Vehicles.

#### III. Explosions—Fire.

#### IV. Poisonous, hot or corrosive substances.

#### V. Electricity.

#### VI. Falls of persons.

#### VII. Stepping on or striking against objects.

#### VIII. Falling objects.

#### IX. Falls of ground.

#### X. Handling without machinery.

#### XI. Hand tools.

#### XII. Animals.

#### XIII. Miscellaneous.

(c) In the classification of accidents according to the *extent and degree of disability* a distinction should be made between fatal and non-fatal accidents and between temporary and permanent disabilities.

Temporary disability should be classified according to duration and uniformity should be obtained by using the following groups:

- I. 2 weeks or less.
- II. over 2 and up to 4 weeks.
- III. over 4 and up to 13 weeks.
- IV. over 13 weeks and up to 6 months.
- V. over 6 months and up to 1 year.
- VI. over 1 year and up to 2 years.
- VII. over 2 years and up to 3 years.

Permanent disabilities should be classified by degree and uniformity should be obtained by using the following groups:

- I. Under 20 per cent disability.
- II. 20 and under 40 per cent.
- III. 40 and under 60 per cent.
- IV. 60 and under 80 per cent.
- V. 80 and under 100 per cent.
- VI. 100 per cent.

Permanent disabilities should be classified at the time they are recognized as such.

(d) The *location of injury* should be clearly distinguished from the nature of injury. The most suitable classification is that of the common anatomical divisions of the body, viz:

- I. head;
- II. trunk;
- III. upper extremities;
- IV. lower extremities;
- V. general.

Each of these groups should be sub-divided if necessary.

(e) The *nature of injury* should be classified as follows:

- I. contusions and abrasions;
- II. burns and scalds;
- III. concussions;
- IV. cuts and lacerations;
- V. punctured wounds;
- VI. amputations;
- VII. dislocations;
- VIII. fractures;
- IX. sprains and strains;
- X. asphyxiation;
- XI. drowning;
- XII. other injuries.

NOTE.—In publishing the above statistics a note should be added on the following points;

1. the scope of the legislation;
2. the system of insurance (compulsory or optional);
3. the nature of the accidents included;
4. the methods of reporting the accidents and of compiling the statistics;
5. a summary of the benefits given to the injured or to their dependents.

In countries in which diseases are compensated as accidents, they should, wherever possible, be distinguished separately in the tables.

#### II—*Accident Rates.*

For industrial and international comparison, it is essential to calculate frequency rates and severity rates.

(a) The *frequency rate* should if possible be calculated by dividing the number of accidents (multiplied by 100,000) by the number of hours of working time.

Where practical difficulties prevent the calculation of the number of hours of working time, this number should be replaced by the number of full-time workers, i.e., the number

of working days divided by 300 or the average number of workers, as may be best suited to the economic and social needs of the country or industry concerned.

#### *Recommendation.*

It is hoped that countries in which compensation is invariably paid in the form of pensions will forward for compilation by the International Labour Office the necessary details for the determination of the mortality rates among persons injured in industrial accidents, so as to establish the degree in which this mortality is influenced by the age of the pensioner, by the time lapsing since the conclusion of medical treatment and by the extent of industrial incapacity.

#### **Conclusion**

In conclusion I should like to refer to the constructive nature of the discussions throughout, and the spirit of cordiality that characterized the various sessions. There was apparent in every quarter a desire to reach conclusions that would be generally acceptable, and that could be adopted as a **working basis** throughout the world. A further gratifying feature was the recognition of the fact that labour statistics must be considered as part of general statistics, and that International co-ordination in labour statistics can only be established and maintained in contact with the statistics of population, trade, production, etc. Particularly was this true of the discussion on classification, the all-embracing nature of which was fully recognized and of the discussion on wages and hours, the intimate connection of which with cost of living and prices statistics (now under advisement by the League of Nations Secretariat) is obvious. In the growth of internationalism, the need for comparable statistics between country and country has been of late increasingly felt. It can be met only by the assumption of a broad outlook upon the statistical problem by international authorities, and by complete co-operation between the agencies operating in the different statistical fields.

---

## CANADIAN LAWS GOVERNING THE EMPLOYMENT OF WOMEN

---

**I**N view of the ever-increasing number of women engaged in industry it may be of interest to examine the various Canadian laws which have been made for their protection.

The summary given below deals with legislation which applies to women only. Thus the workmen's compensation acts,

which benefit the wife or widow of an accident victim as well as the injured of both sexes, have been omitted. On the other hand, the laws providing for mothers' allowances have been included although, strictly considered, they fall more within the sphere of social than labour legislation.

### Employment of Women in Factories

All parts of Canada except Prince Edward Island and the Yukon have laws providing for the inspection and regulation of factories and all of these laws contain special clauses designed to protect women workers from accident or injury to health.

#### HOURS OF LABOUR

The Alberta factory law does not contain any provision limiting daily or weekly hours of employment of women except that prohibiting night work as noted below. The Alberta Minimum Wage Board, however, which has authority to fix maximum hours of labour as well as minimum wages, has issued an order which establishes a 48-hour week for women in the manufacturing industry. Emergency overtime is allowed but the total number of hours including overtime may not exceed 52 hours in any three weeks of any calendar month.

British Columbia has fixed an 8-hour day and 48-hour week for women employed in factories; Manitoba has a statutory 9-hour day and 54-hour week. The Minimum Wage Board in the latter Province has jurisdiction over hours of labour and has fixed a 9-hour day with a 48 to 54-hour week for most classes of establishments. This Act and the orders made thereunder supersede other Acts in case of conflict. The Ontario, Quebec and New Brunswick laws establish a 10-hour day and 60-hour week. The Ontario statute forbids a woman who has been employed on any day for the maximum number of hours to be employed in any other factory on the same day. If she has worked in one factory for less than the permitted number of hours she may not work in another factory for longer than will complete the maximum number of hours allowed by the Act. In all these provinces a different apportionment of the hours per day may be made in order to secure a shorter day's work on Saturday. The Ontario Minimum Wage

Board, which in 1922 was given authority to fix hours of labour for women, has not yet issued any orders dealing therewith. Saskatchewan has established a 48-hour week but does not regulate the arrangement of hours per day. The powers of the Minimum Wage Board in regard to hours of labour are in this province subject to the provisions of the Factories Act. Nova Scotia does not lay down any rule regarding the length of the normal working day. The Minimum Wage law of this Province, which would empower a Minimum Wage Board appointed under its provisions to fix hours of labour as well as minimum wages, has not yet been put in force. Under the Factories Act, however, the inspector may, owing to accident or emergency, permit extension of the hours of labour for women up to a limit of 12½ hours per day and 72½ hours per week. All the other provinces, with the exception of Alberta, have similar provisions for extension of working hours by the inspector for special reasons, British Columbia allowing a 9-hour day and 54-hour week, Manitoba a 12-hour day and 60-hour week, New Brunswick a 13½-hour day and 81-hour week, Ontario a 10-hour day and a 60-hour week, Quebec a 12-hour day and 72-hour week and Saskatchewan a 12½-hour day and 72½-hour week in such cases. Quebec allows such exemption to be granted for a period of six weeks, but all other provinces limit it to 36 days in any 12 months.

With regard to meal hours, the Nova Scotia law directs that ¾ of an hour shall be allowed on each normal day for a noon-day meal, while the other provinces give one hour. When special permit is given for emergency work to be carried on later than 6 p.m. the Quebec law provides that 30 minutes must be allowed for an evening meal. The other provinces have a similar rule for women working after 7 p.m., New Brunswick allowing one hour and the other provinces 45 minutes.

In Quebec the employer in a factory must keep a register in which are entered the hours of labour of female employees for each day and week. In all other provinces except Alberta such a register must be kept during periods when emergency overtime is worked. All provinces require the employer to keep a notice of the working hours permitted to women employees posted in the factory.

### NIGHT WORK

Although Canada has not ratified the Convention adopted by the International Association for Labour Legislation at Berne in 1906 prohibiting the employment of women at night, all the provincial laws restrict such work to some degree. Alberta forbids factory work for women between the hours of 11 p.m. and 7 a.m., except by special written permission of an inspector. The British Columbia Factories Act prohibits work between 8 p.m. and 7 a.m., even in cases where overtime is worked owing to accident or emergency. The Night Employment of Women Act which was passed by the Legislature of this Province in 1921 in order to carry out the Draft Convention of the International Labour Conference at Washington regarding Night Work, comes into force only by proclamation of the Lieutenant-Governor in Council, concurrently with or after the passing of similar legislation in the other provinces. This Act would apply to all industrial undertakings and fix the same limit as the Factories Act, but would permit the night period to be reduced to ten hours on 60 days in the year in exceptional circumstances or in seasonal undertakings. Exception would also be made in case of unforeseen interruption of work and where night labour might be necessary to preserve raw materials from certain loss.

The Manitoba Factories Act forbids the employment of women between 10 p.m. and 7 a.m. even in cases where exemption from normal working hours

is granted. In many classes of factories in this Province the Minimum Wage Board has decreed that women may not start work before 7 a.m. on normal working days. The closing hours fixed by the Board vary from 7 p.m. to 9 p.m.

The New Brunswick Factories Act forbids the employment of women between the hours of 10.30 p.m. and 6 a.m. even in cases where the inspector has granted exemption owing to emergency or accident. This Act does not, however, apply to lobster, fish or fruit-canning establishments.

In Nova Scotia women may not be employed under any circumstances between 9 p.m. and 6 a.m., except on not more than twenty days during the months from July to October inclusive when the night period may be shortened in establishments where the canning or desiccating of fruit and vegetables is carried on.

In Ontario work between 6.30 p.m. and 6 a.m. is not allowed except in cases of emergency when the closing hour may be 9 p.m.

Quebec prohibits work later than 9 p.m. or before 6 a.m. In cotton and woollen factories women may not be employed between 6.30 p.m. and 7 a.m.

The Saskatchewan factory law forbids work to a later hour than 6.30 p.m. except by written permit of an inspector. When exemption is granted in the matter of working hours owing to accident or emergency, women must cease work at 10 p.m. and not resume it until 7 a.m.

### HEALTH AND SAFETY

Nearly all the factory acts make it illegal to employ a woman in such a manner that her health is likely to be permanently injured. In all the provinces except New Brunswick, female employees may not take meals in a room where a manufacturing process is being carried on if forbidden to do so by an inspector. In Quebec this rule applies

to all workers who must in all cases be provided with a room where they may warm their food and, in bad weather, take their meals, sheltered from cold, rain and snow. In Alberta, British Columbia, Manitoba, Nova Scotia and Saskatchewan, the employer must, if directed by the inspector, provide a suitable dining-room at his own expense where the women employees may take their meals.

The Quebec law requires that chairs with a suitable back be provided for all employees whose occupation permits them to be seated. Ontario makes a similar rule for women workers. In the latter province factories where thirty-five or more women are employed must have dressing-rooms and eating-rooms

with a matron in charge, except in cases where the inspector gives written exemption to the employer.

In Quebec women may not perform any operation connected with belting or other modes of transmission and in the other provinces they are forbidden to clean such machinery as mill-gearing while it is in motion.

The factory laws of Alberta, New Brunswick, Ontario, Quebec and Saskatchewan direct all women to wear their hair closely plaited and fastened closely to their heads or confined in a cap or not. In New Brunswick, Manitoba, British Columbia and Saskatchewan no woman may work between the fixed and traversing part of any self-acting machine while it is in motion.

#### Employment of Women in Mines

All parts of Canada with the exception of New Brunswick have laws governing the inspection and regulation of mines. Those of Manitoba, Nova Scotia, and the Yukon do not contain any provisions regarding the employment of women; Quebec and Saskatchewan forbid their employment in the work-

ings of a mine; the Metalliferous Mines Inspection Act of British Columbia prohibits work below ground, while the Coal Mines Regulation Act of that Province as well as the mining laws of Alberta and Ontario forbid their employment except in clerical or domestic work.

#### Employment of Women in Shops

##### HOURS OF LABOUR

In the Province of Manitoba, the Shops Regulation Act fixes the maximum hours of labour for women in shops at 14 per day and 60 per week. Emergency work may, however, be done under written permission of an inspector, but in no case may weekly hours be more than 70. Women may be employed between the hours of 8 a.m. and 10 p.m. on the day before a statutory holiday and from December 14-24, both inclusive, in each year. The Minimum Wage Board of this Province has established in the City of Brandon an 8½-hour day and 48-hour week for the months from June to September inclusive with one half-holiday each week and one week's vacation with pay at the usual rate. A 51-hour week is fixed

for the remainder of the year. Saturday working hours throughout the year may be 11½. During Fair Week and on seven days immediately before Christmas hours of work may be 11½ per day but may not exceed 51 per week. In stores commonly open in the evenings and on Sundays the maximum working week is 52-hours. One full day off must be given in each week. Overtime in all cases is limited to three days a week with extra payment at not less than the regular rate. In the other cities in the Province an 8½-hour day and 50-hour week is fixed for departmental stores with a Saturday half-holiday during June-August inclusive. In 5-10-15c. stores a 9-hour day and 48-hour week is established with 11½-hours on Saturdays and a 53-hour week during the month of December. One

half-holiday must be given each week except during the month of December. For standard retail stores the Board has prescribed an 8½-hour day except on Saturday when 11½-hours may be worked, and a 49-hour week except in December when 54-hours is permitted. One half-holiday must be given each week except during December. Employees in shops or stores commonly open in the evenings or on Sunday or both, have a 50-hour week with one day off duty. In this province the Minimum Wage Act and orders made thereunder supersede other acts and regulations in case of conflict.

In Ontario, employment in shops is governed by the Factory, Shop and Office Building Act which provides for a 10-hour day and 60-hour week. Work must not begin earlier than 7 a.m. nor end later than 6 p.m. A woman who has been employed in a shop for the permitted number of hours may not be employed on the same day in another shop, nor may one who has been employed for less than the maximum period in any shop be employed in another shop for a longer time than will complete such maximum period.

#### Employment of Women in Laundries

In all provinces except in Nova Scotia, laundries, excluding home laundries, are subject to regulation under the factory acts so that provisions in regard to hours of labour, night work, etc., given above for factories apply to laundries also. In Manitoba, Chinese laundries are covered by the Act. In Alberta an order of the Minimum Wage Board relating to laundries fixes a 48-hour week for female employees. Emergency overtime is allowed, however, but must not exceed 52 hours in any 3 weeks of any calendar month. Laundry workers in Manitoba may be employed for

The other provinces have made no regulations regarding the hours of labour for women in shops.

#### HEALTH AND COMFORT.

Alberta, British Columbia, Manitoba, Nova Scotia, New Brunswick and Ontario have passed legislation requiring an employer to provide a suitable chair or seat for each woman worker and to allow her to use it when her work permits.

In Alberta and Ontario shops are governed by the Factories Acts and the clauses of those acts, which allow the inspector to forbid the taking of meals in a room where a manufacturing process is going on and to direct that the employer provide a suitable dining-room at his own expense, apply to shops also. In Ontario the Factory, Shop and Office Building Act requires the employer in a shop where thirty-five or more females are employed to provide suitable dressing-rooms and dining-rooms with a matron in attendance. The inspector may, however, exempt the employer from compliance with this regulation.

9 hours per day and 52 per week under an order of the Minimum Wage Board. The Minimum Wage Act and orders made thereunder supersede other acts and regulations in case of conflict.

The Female Employment Act of Saskatchewan requires that any person employing a white woman or girl in any capacity which necessitates her residing, lodging or working in a laundry must first obtain a special licence from the municipality in which such laundry is situated. Special provisions regarding Chinese laundries may be found under the heading Employment by Orientals.

#### Employment of Women in Hotels and Restaurants

The Factories Act of Alberta defines a "Shop to include a restaurant, so that the regulations laid down for shops apply to restaurants also. The Mini-

mum Wage Board of the province has decreed a 48-hour week for workers in restaurants, hotels and refreshment rooms with provision for overtime in

emergency cases. Such overtime must not exceed 52 hours in any 3 weeks of any calendar month.

In British Columbia the Minimum Wage Board order dealing with the Public Housekeeping Occupation, which includes waitresses, cooks, etc., in restaurants, hotels, tea-rooms and similar establishments fixes a 48-hour week with provision for emergency overtime up to 52 hours, payable at time and one-half.

The Manitoba Minimum Wage Board has prescribed a 10-hour day and 48-hour week with one full day off each

week. In cases of emergency a permit for overtime may be obtained from the Bureau of Labour but hours of work may not exceed 11 per day and overtime may not amount to more than 6 hours per week nor be worked on more than 20 days in the year.

In Saskatchewan the Minimum Wage Board has fixed a 10-hour day and 50-hour week in the case of establishments open to the public on six days of the week only; a 56-hour week is permitted for establishments which are open 7 days per week. A permit must be obtained for overtime.

#### Employment of Women by Orientals

Legislation prohibiting the employment of women by Orientals has been enacted in British Columbia, Ontario and Manitoba. In the case of the two last-named provinces the law comes into force only on proclamation by the Lieutenant-Governor in Council and has not yet been put in force. The British Columbia law provides that no person may employ in any capacity a white woman or girl or permit any white woman or girl to reside or lodge in or work in or, save as a *bona fide* customer, to frequent any restaurant, laundry or other place of business or amusement owned, kept or managed by any Chinese person. The Manitoba Act makes the same provisions but includes employment by Japanese and other Orientals in the prohibition. At the last session of the Legis-

lature of this Province a clause was added to the Winnipeg City Charter enabling that city to pass by-laws prohibiting the employment, except by special license of any female person in any hotel, restaurant, refreshment or entertainment room or laundry, owned, managed or conducted by a Chinese person. In Ontario no Chinese person may employ in any capacity or have under his direction or control any female white person in any factory, restaurant or laundry. The Female Employment Act in Saskatchewan requires any person employing a white woman or girl in any capacity which necessitates her residing, lodging or working in any restaurant or laundry to obtain a special license from the municipality in which such restaurant or laundry is situated.

#### Employment of Women in Bar-Rooms

In Quebec and the Yukon no woman except the wife of a licensee may serve guests in a bar-room. In Manitoba no woman except the wife or daughter of the licensee may be so employed without

a special permit from the Director of Public Accommodation. Similar provisions in Alberta and Saskatchewan laws were repealed by prohibition measures in those provinces.

#### Employment of Women in Labour Camps

Ontario is the only province which regulates the employment of women in labour camps. Such employment is only allowed under permit issued by the Deputy Minister of Labour subject

to compliance by the employer with rules respecting sanitary conditions, hours of labour, proper food and supervision, including the appointment of a suitable matron.

### Moral Protection

A section of the Criminal Code of Canada makes any one guilty of an indictable offence and subject to two years' imprisonment who seduces or has illicit connection with any girl pre-

viously chaste and under the age of twenty-one years who is in his employ or under his control or direction or receives her wages or salary directly or indirectly from him.

### Minimum Wages

All the provinces of Canada except Prince Edward Island and New Brunswick have minimum wage laws on their statute books, but those of Quebec and Nova Scotia have not yet been put in force. The Nova Scotia law becomes operative only on proclamation of the Lieutenant-Governor in Council, which has not been made, and no commission has been appointed under authority of the Quebec law. The minimum wage acts are administered by boards or commissions of from three to five members including (except in Alberta) one or two women. In Manitoba employers and employees must be represented by two members each. In all provinces except Quebec the Board has authority to fix hours of labour as well as minimum wages, but in Nova Scotia and Saskatchewan this authority is subject to the provisions of the Factories Acts. In Alberta the determination of the Board with respect to periods of employment shifts supersedes the provision of the Factories Act. The Alberta Act covers all female workers except

domestic servants in places on the schedule to the Act. British Columbia includes all female employees except farm workers, fruit pickers and domestic servants, and Ontario all except farm labourers and domestic servants. The Quebec Act applies to workers in industrial establishments only and that of Saskatchewan to shops and factories in cities, while the Manitoba law covers employees in offices, places of amusement, mail order houses, factories and shops (including hotels and restaurants) in cities. In Nova Scotia and Saskatchewan the application of the Act may be extended to parts of the provinces other than cities. All the laws make provision for special rates for handicapped workers and apprentices. The boards of Alberta, British Columbia and Ontario have authority to summon conferences composed of equal representatives of employers and employees in any industry, together with one or more disinterested persons, to discuss and make recommendation regarding the minimum wage to be established in that industry.

### Earnings of Married Women

The Territory of the Yukon and all the provinces of Canada except Quebec have laws protecting the earnings of a married woman which entitle her to hold and dispose of as her separate property all wages, earnings, money or property gained by her in any employ-

ment, business or occupation which she carries on separately from her husband or by the exercise of any literary, artistic or scientific skill. In Manitoba this law is subject to the provisions of the Dower Act and to the trusts of any settlement.

### Maternity Protection

The Maternity Protection Act of British Columbia was passed by the Legislature in order to carry out the provision of the Draft Convention on that subject adopted by the International Labour Conference at Washington in

1919. This Act forbids the employment of any woman in any industrial or commercial undertaking during the six weeks following her confinement and permits her, on production of a medical certificate, to leave her work for six

weeks prior to the probable date of confinement, and limits the right of an employer to dismiss her during her absence. This Act also provides that a woman who is nursing her child must be allowed half an hour twice a day during working hours for that purpose.

A resolution passed in 1920 under the authority of the Public Health Act of the Province of Saskatchewan authorizes the payment of a sum not exceed-

ing \$25 to assist any expectant mother who, for financial reasons, may be unable to procure the necessary medical, hospital or nursing aid or clothing for herself or her expected child. Application should be made to the Commissioner of Public Health through the vital statistics registrar of the district in which the woman resides. This aid is not given in cities or towns but is intended for those in outlying districts.

#### Mothers' Pensions

Five of the Canadian provinces, Alberta, British Columbia, Manitoba, Ontario and Saskatchewan, have made provision by law for the payment of allowances to indigent mothers. In Nova Scotia a committee was appointed in 1919 to inquire into the matter and brought in a report in 1921 recommending that such an act be passed, but no action has yet been taken.

In all the provinces which make provision for allowances, a widow or the wife of an inmate of a hospital for the insane in Canada is eligible. British Columbia and Ontario include also deserted wives, and these two provinces, as well as Manitoba and Saskatchewan, include the wife of a man who is so physically disabled that he is unable to support his family. British Columbia, Manitoba and Saskatchewan also authorize an allowance to the wife of an inmate of a penitentiary. In Alberta the Superintendent of Dependent and Delinquent Children may recommend that assistance be given to a woman entitled to and requiring it even if no application has been made by her or on her behalf. In the other four provinces a suitable foster-mother or other person whose case is a proper one for assistance may receive it. The Manitoba Act does not require residence for any specified time prior to application. Alberta requires the beneficiary to have been a resident of the province at the time of the passing of the Act, or the wife of a man who was resident in the province at the time of his death or of his becoming disabled. Saskatchewan requires of the beneficiary two

years' residence in Canada, one year being spent within the Province, and Ontario requires two years' residence in the province. In British Columbia 18 months' residence in the province is necessary, and the husband must also have been a resident at the time of death, disablement or incarceration. The two last-named provinces require the applicant to be a British subject.

The maximum age of children for whom benefit is payable is sixteen years in British Columbia, Ontario and Saskatchewan. In Alberta it is 16 years for girls and 15 years for boys, while the Manitoba law does not fix any age limit. In Ontario the mother of one child under 16 years of age is not eligible for an allowance unless she has also the care of a permanently disabled husband or invalid child over sixteen years of age. In the other provinces the mother of one child may become a beneficiary under the Act.

The British Columbia law limits the amount of the allowance to \$42.50 per month for a mother with one child under sixteen years of age, with an additional payment of \$7.50 for each additional child under 16 years of age. Provision is also made in this Act for the cessation of payments upon the remarriage of the mother. In the other provinces the administrators of the acts have authority to fix the amount of the allowance.

The Ontario and Saskatchewan Acts contain clauses providing that arrangements may be made with other provinces for reciprocal treatment of beneficiaries.

## CHILD LABOUR IN CANADA

### Summary of Provincial Laws regulating the Employment of Children in Various Occupations.

THE regulation of the employment of children and young persons is one of the subjects which fall within the scope of provincial rather than Dominion legislative authority. Most of the laws in Canada relating to child labour are contained in the various provincial acts which provide for the regulation of factories, shops and offices. The employment of children in mines, bake-shops, street trades, and other occupations, is also restricted by legislation in several provinces. Besides these

laws, which expressly limit or regulate the employment of child labour, the provincial school acts have an important bearing on the same subject, regular employment being impossible for children who are under the age of compulsory school attendance. This connection is evident particularly in the use of employment certificates, based on educational tests, which are required as a condition of the employment of young persons in Quebec and Ontario, and with respect to particular occupations, in other provinces.

#### Laws governing attendance of Children at School.

The provincial laws governing the attendance of children at school contain the following provisions:

*Alberta.* — Children in Alberta between the ages of seven and fifteen years must attend school, and no child under fifteen who has not a valid excuse may be employed by any person during school hours, excuses being valid for children whose services are needed in husbandry or for urgent and necessary household duties, or for the necessary maintenance of such child or of some person dependent upon him. A certificate may, upon application by his parent or guardian to the school principal or other competent authority, be granted to a child under such special circumstances, but the exemption may not be for a period longer than six weeks during each school period.

*British Columbia.* — The age of compulsory school attendance in this province is from seven to fifteen years, exceptions being made only for children whose education is being otherwise provided for satisfactorily, or on account of sickness or some other unavoidable cause.

*Manitoba.* — No child under the age of fourteen years may be employed during school hours, but a certificate of exemption, covering a period of six weeks in any school term, may be granted to a child over twelve years of age whose services are needed in husbandry or for urgent and necessary household duties. The age limit may be raised from fourteen to fifteen by any school board having an attendance officer on the passing of a by-law.

*New Brunswick.* — A child under sixteen years of age may not be employed during school hours in cities or incorporated towns in which Part II of the School Attendance Act has been brought into force by a resolution, unless a satisfactory school certificate is produced. No child under the age of thirteen years may at any time be employed in any mechanical or manufacturing establishment.

*Nova Scotia.* — The age of compulsory school attendance is between six and sixteen years in cities and incorporated districts, and country districts may also widen the age limit, by vote, so as to include children within the same age limits, instead of those only

between seven and fourteen years. Any child of over twelve years who passes a satisfactory examination in Grade 7, and a child of over thirteen years who satisfies the Board, the school principal, secretary, or other authorized person that it is necessary for him to go to work, may be granted an employment certificate, good only for the work specified thereon, and subject to a medical certificate. Such children are required to attend evening technical or other classes approved by the Board.

*Ontario.* — The School Attendance Act forbids the employment of children under fourteen years of age during school hours, but a special certificate may be granted to a child by the school attendance officer for a period of not more than six weeks in each school term, on proof that the child's services are required in urgent or necessary household duties, or for the maintenance of himself or of some person dependent upon him. The Adolescent School Attendance Act requires young persons between fourteen and sixteen years of age to attend school, unless excused for sufficient cause, and forbids their employment except under a certificate of employment. In rural sections, however, children within this age limit may be exempted if they are required for work at home. The operation of that section of the act which would require adolescents between sixteen and eighteen years of age to take part time cour-

ses of instruction for fixed periods, was deferred by the Legislature at its last session until September, 1925.

*Prince Edward Island.* — The attendance at school of children between the ages of seven and thirteen years is required by law.

*Quebec.* — There is no compulsory school attendance law in this province. The provisions in regard to employment certificates for young workers are contained in the law governing industrial establishments (see below under "Factories").

*Saskatchewan.* — The School Attendance Act provides that every child between the ages of seven and fifteen years must attend school for the full term unless he has some person dependent upon him, or has some other valid excuse. No child without such excuse may be employed during school hours. Where the services of any child over thirteen years of age, who has passed Grade 5, are required in husbandry or for necessary household duties, the school trustees may grant a certificate exempting such a child from school attendance for a period of not more than thirty days.

*Yukon Territory.* — Children between the ages of seven and twelve years are required, unless they have a valid excuse, to attend school for at least sixteen weeks each year, eight weeks of which must be consecutive.

#### Employment of young persons in mines.

*Alberta.* — No boy under the age of sixteen years may be employed in or about any mine below ground, no boy under fourteen above ground, and no boy between fourteen and sixteen above ground unless he can show a satisfactory certificate of his school standing. No girl of any age may be employed in or about a mine, above or below ground, except in an office. It is provided further that no boy under the age of eighteen years shall operate any machinery, such as an engine, windlass or

gin, for transferring men from one part of a mine to another, unless such machinery is worked by a horse, in which case the age limit is sixteen years.

*British Columbia.* — No boy under fifteen years of age may be employed in a coal mine, and no boy under fourteen years may be employed above ground. No girl may be employed either above or below. These prohibitions, however, do not apply to clerical work, or to work in a boarding house or resi-

dence at a colliery. In metal mines the age limit for boys is twelve years, and the employment of girls of any age is prohibited. No boy under sixteen years of age is permitted to operate machinery for moving material in a coal mine, while service elevator men must be at least twenty-two years old. In metal mines elevator men must be at least eighteen years of age.

*Manitoba and New Brunswick.*—In Manitoba there are no provisions regarding the employment of children and young persons in mines, and in New Brunswick there is no special law for the regulation of mining.

*Nova Scotia.*—No boy under the age of sixteen years may be employed in or about a coal mine. In metal mines boys under twelve years of age may not be employed, and boys under sixteen may be employed only if they can produce a satisfactory school certificate. The hours of work of such juvenile labour is limited to ten in the day or fifty four in the week, except in emergencies. In the same class of mines service elevator men and those in charge of other machinery for moving workmen must be over eighteen years of age, but where such machinery is worked by an animal a boy of fourteen years may act as driver.

*Ontario.*—No boy under sixteen years of age may be employed in or

about a mine, and no boy under eighteen may be employed below ground. No girl may be employed except in clerical work. Operators of hoisting machinery for moving materials must be at least eighteen, and for moving persons at least twenty years of age.

*Quebec.*—No boy under fifteen years of age may be employed underground in any mine or quarry, and no girl of any age may be employed in the working of any mine. For boys between fifteen and seventeen years of age the hours of work are limited to forty-eight per week. Elevator men for passengers must be at least twenty years of age, but for hoisting materials boys over sixteen years may be employed. Boys under that age may not be employed for the transmission of signals or orders for putting such machinery in motion.

*Saskatchewan.*—No boy under fourteen years of age, and no girl of any age, may be employed in mine workings. Operators of passenger elevators must be at least eighteen years of age.

*Yukon Territory.*—No boy under twelve years of age may be employed below or above ground in a mine, and boys between twelve and sixteen years of age may be employed only when they can show a school certificate. The hours of labour of such employees are limited to eight in the day and forty-eight in the week, except in emergencies.

#### Employment of Children in Factories, Shops and Office Buildings.

*Alberta.*—No boy or girl under fifteen years of age may be employed in factories, shops or office buildings in cities and towns having a population of over five thousand. This regulation includes restaurants, but not hotels or boarding houses. Girls over fifteen are protected by the special provisions contained in the act with regard to female labour generally.

*British Columbia.*—No boy under fourteen and no girl under fifteen years of age may be employed in a factory,

except in the business of canning fish and work incidental thereto, and in fruit packing, but in these exceptional occupations children may be employed only during the runs of fish, or during the fruit season. Girls over fifteen and under eighteen are included with women in sections which limit the working hours of female employees to eight in the day and forty-eight in the week, except in emergencies, when nine hours in a day and fifty-four hours in a week are allowed. The exceptional hours, however, must not continue longer than

thirty-six days in a year. Similarly young girls may not be employed between the hours of 8 p.m. and 7 a.m., and, in addition to the mid-day meal hour, forty five minutes must be allowed between 5 p.m. and 8 p.m. to every girl who is employed after 7 p.m. The limitations upon the hours of labour are not binding upon the employers of children and young girls in fish canning and curing or in fruit packing during the busy periods mentioned above. Young girls must not be employed in cleaning machinery while in motion or in working between the fixed and traversing part of any self-acting machine while it is in motion. The employer is required to keep a register of all young girls employed in a factory, and of their employment. The provisions of the act which relate to the time allowance for meals, or the affixing of notices do not apply to factories conducted on the principle of not employing young girls.

The Lieutenant Governor-in-Council may from time to time, by order published in the *British Columbia Gazette*, prohibit the employment of girls under eighteen years of age and of boys under sixteen years of age in factories in which the work is held to be dangerous or unwholesome.

The Shops Regulation Act of the same province forbids the employment in a shop of a boy or girl under sixteen years of age for more than sixty-six and one-half hours, including meal times, in a week, and for more than thirteen hours on Saturday or eleven hours on other days, including meal times. Not less than one hour must be allowed for the mid-day meal, with an additional forty-five minutes between 5 p.m. and 8 p.m. for those employed after 7 p.m. A notice setting forth the provisions of the act, and the number of hours per week during which a young person may be lawfully employed, must be kept posted in every shop where a young person is employed.

No boy or girl under the age of fourteen years may be employed in a bake shop, and no person under eighteen years may be employed in a bake shop between 9 p.m. and 7 a.m.

The Night Employment of Young Persons Act and the Employment of Children Act form part of a series of measures enacted by the British Columbia Legislature in 1921 to give effect to certain draft conventions and recommendations of the International Labour Organization (League of Nations). These laws, however, are not to become operative until the other provinces enact similar legislation. The first-named act would prohibit the employment of boys or girls under eighteen years of age in any industrial undertaking between the hours of 8 p.m. and 7 a.m., while the second would prohibit the employment of boys under fourteen and of girls under fifteen years of age in an industrial undertaking of any kind, with the exception of agriculture and dairying.

*Manitoba.*—Boys under fourteen years of age and girls under fifteen must not be employed in a factory, and employers of children of either sex under sixteen must have a satisfactory age certificate for each child. The employment of boys under sixteen and girls under eighteen in establishments where the processes are considered dangerous or unwholesome may be prohibited by Order-in-Council. The hours of labour for young workers may not exceed nine in a day or fifty-four in a week, unless a different apportionment is made of the working hours in order to allow for a shorter work day on Saturday. Young girls are included in the general class of female employees for whom special provisions are made in regard to the cleaning of machinery, etc., time allowed for meals, furnishing of suitable quarters for taking meals. Girls under seventeen years of age, however, are not liable, as are other female employees, to be called upon to work

extra hours in emergencies. Young girls may not work on machinery in motion.

Under the Shops Regulation Act no child under fourteen years of age may be employed in a shop, that is, a retail or wholesale store, warehouse, etc. Exception to this rule, however, is made for boys between thirteen and fourteen years of age, who may be employed for eight hours per day and forty-eight hours per week on production of school certificates and permits from the labour bureau. Boys of this age may work for two hours on school days and eight hours on holidays, not exceeding in all forty-eight hours in the week. Young persons, that is, boys from fourteen to seventeen and girls from fourteen to eighteen years of age, may not be employed for more than fourteen hours per day or sixty hours per week, except in outdoor work, such as driving a delivery rig, in which the weekly limit is extended to sixty-six hours. A further special extension of working time up to seventy hours may be allowed in emergencies, but only in regard to young persons over sixteen years of age. Young persons may also be employed from 8 a.m. until 10 p.m. on the day before a statutory holiday and during Christmas week. Where late hours are observed employees must have an allowance of forty-five minutes for an evening meal.

The Bake Shop Act forbids the employment of any child under fourteen years of age in any bake shop, except by written permission of an inspector of the provincial bureau of labour.

*New Brunswick.*—The Workmen's Compensation Board, which administers the Provincial Factories Act, has authority to prohibit the employment of girls under eighteen and boys under fourteen years of age in factories where the work is considered dangerous or unwholesome. Employers are required to meet the full liability of a workman's compensation in connection with accidents to girls under sixteen or boys

under fourteen years of age. The limitation of the working hours of female workers to ten in the day and sixty in the week applies also to young girls. Similarly, young girls come under the provisions affecting female employees generally as to meal time, extensions of hours in emergencies, employment about machinery, etc. No child under fourteen years of age may operate an elevator in a factory.

*Nova Scotia.*—Children under fourteen years of age may not be employed in a factory, with the exception that during the summer months they may be employed in gathering or preparing fruits or vegetables for canning or desiccating, prior to the operation of cooking. Birth certificates are required for all employed children under sixteen years of age. The employment of girls under eighteen and boys under sixteen may be prohibited by Order-in-Council in factories in which the work is considered to be dangerous or unwholesome. Boys and girls under sixteen years of age may not be employed for more than eight hours in the day or four hours on Saturday, and the hours for girls under eighteen must not exceed nine in the day. Young persons, as well as women, must have an hour for their mid-day meal, and, if the inspector so directs, meals may not be eaten in a workroom but a suitable place must be provided by the employer. Exemption in regard to hours of labour for girls under eighteen years of age may be granted in emergencies for not more than thirty-six days in the year, such employment being prohibited in the night period, from 9 p.m. to 6 a.m., and being limited to twelve and a half hours in the day and seventy-two and a half hours in the week. Young girls may not be employed on running machinery between the fixed and traversing parts.

The Children's Protection Act provides that boys under fourteen and girls under sixteen years of age may not be employed in or about any shop for a

longer period than eight hours on any day, or four hours on Saturday, exclusive of meal time.

*Ontario.* — The Factory, Shop and Office Building Act prohibits the employment of children under fourteen years of age in any establishment coming under the act, this provision, however, not being applicable to a shop where only the employer's family are employed and are at home. The age limit for employment in shops was raised in 1921 from twelve to fourteen years, the law previously permitting children between those ages to be employed under certificate from the school authority. The employment of boys under sixteen and girls under eighteen years of age may be prohibited by Order-in-Council in factories in which the work is considered dangerous or unwholesome. Young persons of these ages may not be employed before 7 a.m. or after 6.30 p.m. in a factory, or 6 p.m. in a shop, except by written permit. Working hours must not exceed ten in the day, unless working time is otherwise divided to allow one shorter day each week, the total working hours in the week not in any case to exceed sixty. In emergencies, however, additional time may be worked by young persons up to twelve and a half in the day, or seventy-two and a half in the week, these longer hours not continuing for a longer period than thirty-six days in the year. Young persons working later than 7 p.m. must be allowed a forty-five minute interval for supper, in addition to the hour at noon which is also required. Young persons may also be required to work until 10 p.m. on the evening before a statutory holiday. The inspector may forbid the taking of food into a room where a manufacturing process is carried on, and may require the employer to provide a place suitable for eating. A permit from the Provincial Deputy Minister of Labour is required for the employment of girls in any occupation which would require them to lodge in a camp. Certain classes of factory

work are forbidden for young persons, as for women, such as the cleaning of mill gearing or other machinery while it is in motion. Young girls are not to be allowed to work between the fixed and traversing part of a self-acting machine while it is in motion. No person under eighteen years of age may operate an elevator in a factory, shop, or office building.

*Quebec.* — The Industrial Establishments Act provides that no boy or girl under fourteen years of age may be employed in any factory, workshop, mill, etc. The inspector may require an age certificate verified by affidavit for all boys and young girls employed, and may also require a physical examination of any boy or girl, and the discharge of these found to be unfit. Certificates of capacity to read and write fluently are required for boys and girls under sixteen years before they may be employed in any industry, trade or business, including theatres, hotels, restaurants, telegraphs, advertisement distribution service, etc. Children under sixteen must have similar certificates before they may sell papers or carry on any business in the streets or in public places; and in no case may such occupations continue after 8 p.m. Special permits may be granted by an inspector appointed under the Act, authorizing the employment of children under sixteen who are enrolled as pupils at a night school and attend classes regularly. Employers are required to keep copies of age certificates furnished by employees, and to produce them when required. In establishments declared by the Lieutenant-Governor-in-Council to be dangerous, unwholesome or incommodious the ages of employees must be over sixteen for boys and over eighteen for girls. Boys and girls under eighteen (as well as women) may not be employed during the night, that is, before 6 a.m. or after 9 p.m., or for more than ten hours in the day, unless the working hours are differently apportioned with a view to a shorter Saturday, the working week

not to be more than sixty hours. In cotton and woollen factories the hours of work of boys under eighteen years of age, as of girls and women, are limited to ten in the day and fifty-five in the week, with an additional hour for meals, night work, that is work between 6.30 p.m. and 7 a.m. being prohibited. In emergencies, for a period not longer than six weeks in the year, the working hours of boys and girls under eighteen, as well as those of women, may be extended to twelve in the day and seventy-two in the week, but all such work must be within the limits of 6 a.m. and 9 p.m. At least thirty minutes must be allowed for an evening meal to employees working after 6 p.m. Employees may not take meals in a workshop, and a place suitable for taking and warming food must be provided by the employer.

Children, young girls and women are not permitted to do any operation connected with belting or other modes of transmission.

*Saskatchewan.* — The Factories Act forbids the employment in a factory of any boy under fourteen and of any girl under fifteen years of age. The employment of young persons under eighteen may be forbidden by Order-

in-Council in industries held to be dangerous or unwholesome. They must not be required to work later than 6.30 p.m., except by special permit, or for more than forty-eight hours in a week, not including the hour which must be allowed at noon for meals. The inspector may forbid boys and girls under eighteen years of age to take their meals in a room where a manufacturing process is carried on, and may require the employer to provide a suitable dining room. In emergencies, exemptions may be granted in respect to the limitation of working hours of young persons for a period of not more than thirty-six days in a year, the limit in exceptional circumstances being twelve and a half hours in the day and seventy-two and half hours in the week, night work, that is work between 10 p.m. and 7 a.m., being forbidden. For employees working after 7 p.m. an interval for meals of forty-five minutes must be allowed. Young girls and women may not clean machinery while it is in motion, and young girls may not work between the fixed and traversing parts of a self-acting machine while it is in motion. No young person under sixteen years of age may operate a passenger elevator in an industrial establishment.

#### Employment of Children in various occupations.

The employment of children in street trades is regulated in several provinces, or provision made for such regulation.

In Alberta municipal councils are authorized to pass by-laws regulating, controlling and licensing children under eighteen years of age engaged as messengers, vendors of newspapers and small wares, and bootblacks, penalties being provided for persons who employ children for unlawful purposes or during prohibited hours.

In Manitoba any child between the ages of twelve and sixteen years must have a license from the Provincial Superintendent of Neglected Children before he may hawk or sell newspapers or other articles in a street during

school hours. The Superintendent must have full information as to the age, physical condition and other particulars concerning the child. No fee is charged for the license, and no license may be issued to a girl.

In Nova Scotia no child under sixteen years of age may engage in any street trade during school hours unless he can produce a certificate from the school authorities in regard to his educational proficiency.

In Ontario no boy or girl under sixteen may engage in any street trade or occupation during the night. No license may be issued in respect to a child under ten years of age.

(Quebec legislation on this subject is noted above under the section outlining factory legislation.)

In Saskatchewan children under the age of sixteen years may not engage in street trades during the night. Municipal councils may pass by-laws governing the licensing of children as boot-blacks, messengers or vendors of newspapers or small wares.

The Alberta Billiard Room Act of 1919 forbids the employment in or about a billiard room of any person

under the age of eighteen years. In Manitoba, no person under the age of sixteen years may be employed to operate a passenger elevator. In Ontario, children under sixteen may not operate a motor vehicle, and young persons between sixteen and eighteen may do so only under license. In Alberta, New Brunswick and Nova Scotia no children may be employed in a brewery, saloon, etc., and in Quebec no person under eighteen years of age may act as a bartender.

---

## NEW ORDERS OF ALBERTA MINIMUM WAGE BOARD

---

### Minimum Rates for Female Workers in Certain Occupations reduced from \$14.00 to \$12.50

THE Minimum Wage Board of Alberta, after conferences with the parties concerned in the existing orders governing factories, laundries and shops, decided during November to repeal these orders, and to reissue them in a new form. The original orders, which were reprinted in the LABOUR GAZETTE for March, 1923, pages 292 to 294, fixed the minimum wage for experienced female employees in these industries at \$14 per week. This rate was temporarily reduced by subsequent amendments to \$12 a week, the lower rate to continue in effect until September for workers in manufacturing establishments and in laundries until the \$14 minimum rate should come into force.\* The new orders fix at \$12.50 per week the minimum rate of wages for experienced female employees in the occupations mentioned above, with corresponding modifications in the rates for inexperienced female employees. Order No. 1, as reissued, also makes new subdivision in the general classification of manufacturing, the various occupations being grouped according to the

difficulty of the processes involved, and to the length of the period required for the attainment of proficiency by learners.

Orders No. 1, No. 2, and No. 6 are reproduced below. Besides these new orders, which supersede the orders already in existence, the Board has also published Orders No. 9, No. 10, No. 11, and No. 12.

Order No. 9 amends Order No. 8 by further deferring, until December 1, the operation of Orders No. 1, 2, 6 and 7.

Order No. 10 revises the existing Order No. 3† which fixes the minimum wage for female employees in hotels, restaurants, refreshment rooms, boarding houses, etc., in respect to the rate of wages for apprentices or learners. The existing rates, namely, \$10, \$11 and \$12 for the first, second and third month of employment respectively, are specified in the new Order to relate to a working week of six days, while for a week of seven days new minimum rates are fixed for each of the first three months of employment, at \$11.50, \$12.75 and \$14.00. When learners have completed their period of training they

\**Labour Gazette*, April 1923, page 396.

†*Ibid.* March 1923, page 293.

are to receive at least \$14 for a week of six days, and \$16.50 for a week of seven days, these being the existing rates for experienced workers.

Order No. 11 amends the existing Order No. 4<sup>†</sup> which fixes the minimum wage for female employees in personal service occupations, by adding to the specified occupations in this class females who are employed as operators of elevators.

Order No. 12 repeals the former Order No. 1, No. 2, and No. 6; and also repeals Order No. 7, which was also issued early in the present year\* fixing the minimum rate for the occupations covered by orders No. 1, No. 2 and No. 3, definitely at \$14 per week.

Judge A. A. Carpenter, chairman of the board explained the Board's action in fixing the new minimum weekly wage at \$12.50, as follows:

"After a careful consideration of the evidence available—and it may be said that in the last series of conferences alone the views of approximately 100 of the parties directly interested were presented—the board, or a majority of its members, came to the conclusion that apart from any other considerations, it would be unwise, even from the standpoint of the employees, to bring into effect order No. 7 in view of the conditions now prevailing in the province. In the board's view, the possibility if not the probability that the higher minimum would result in the loss of employment for a considerable number of employees and short time for a further considerable number, could not lightly be disregarded. At the same time, in connection with employment in the industries covered by the order affected, the question of a living wage was carefully considered, and in arriving at the \$12.50 minimum it has adopted, the board believes that the principle generally supposed to be involved in fixing a minimum wage, i.e., the providing of a living wage, has not been lost sight of."

At a hearing held at Edmonton early in November to consider the revision of the minimum rate of \$14 a week, as fixed by Order No. 7, the manufacturers submitted the following reasons for a reduction:

1. The high weekly minimum of \$14 would prejudice Alberta manufacturers in competition with those of Eastern Canada.
2. The minimum of \$14 which exists in Saskatchewan and British Columbia was fixed at a time when the cost of living was higher than at present.
3. The limiting of the number of inexperienced girls to 25% is a serious handicap, especially in seasonal occupations.
4. The training periods allowed by the orders are too short, particularly in some industries where an intelligent girl requires a longer time to acquire the experience required to earn \$14 a week.
5. The orders hindered employers from employing girls of low earning capacity, that is, it deprived such workers of wages altogether.

ORDER No 1.—*Fixing Minimum Wage for Female Employees in Manufacturing Industry.*

1. No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in the making, preparing, altering, repairing, ornamenting, printing, finishing, packing, assembling parts of, adapting for use or sale any article or commodity at a rate of wages less than \$12.50 per week.

An experienced female is one who has completed the period of learning as specified in this Order.

2. The rate of wages for apprentices or learners may be less than the rate prescribed for experienced workers and shall be in accordance with the following schedule:

(a) For all inexperienced females employed in meat packing, seed packing and tea packing establishments, any business, trade, calling for occupation in which any of the articles or commodities mentioned in the following list

are manufactured, prepared or adapted for sale or use, bags, baking powders, beds, bed springs, buttons, cans, clothes pins, coffee, corn brooms, cream and milk products, drug and toilet preparations, explosives, extracts, gas mantles, honey, ink, jelly powders, macaroni, matches, molasses, munitions, paints, peanut butter, roofing, sauces, soap, soft drinks, spices, sugar, sweeping compounds, syrups, toys, varnish, vermicelli, wash boards, whisks, yeast, biscuits, brushes, candy, and any other manufacturing industry not enumerated in these schedules: an inexperienced female shall be paid wages at a rate not less than—

\$6.00 per week for the 1st, 2nd and 3rd months;

\$8.00 per week for the 4th, 5th and 6th months;

\$10.00 per week for the 7th, 8th and 9th months;

after which period she shall be considered experienced and shall be paid not less than the minimum rate of \$12.50 per week prescribed for experienced workers.

(b) For all inexperienced females employed in photographic studios, or any business, trade, calling or occupation in which any of the articles or commodities mentioned in the following list are manufactured, prepared, or adapted for use or sale, awnings, bedding, mattresses, men's neckwear, overalls, shirts, tents, umbrellas, water-proof clothing, window shades, caps, carpets, cigars, elastic goods, furniture, gloves, hats (other than millinery), hosiery, ladies' and children's wear, leather goods, regalia, rugs, boots and shoes, dipped chocolates draperies, furniture covering, men's ready-to-wear clothing, paper boxes, garment alterations, jewellery manufacturing, knitting factories, or any allied industry an inexperienced female employee shall be paid wages at a rate not less than—

\$6.00 per week for the 1st, 2nd, 3rd and 4th months;

\$8.00 per week for the 5th, 6th, 7th and 8th months;

\$10.00 per week for the 9th, 10th, 11th and 12th months;

after which period she shall be considered experienced and shall be paid not less than the minimum rate of \$12.50 per week prescribed for experienced workers.

(c) For all inexperienced females employed at book-binding, embossing, engraving and printing, an inexperienced female employee shall be paid wages at a rate not less than—

\$7.00 per week for the 1st, 2nd, 3rd, 4th, 5th and 6th months;

\$9.00 per week for the 7th, 8th, 9th, 10th, 11th and 12th months;

\$11.00 per week for the 13th, 14th, 15th, 16th, 17th and 18th months;

after which period she shall be considered experienced and shall be paid not less than the minimum rate of \$12.50 per week prescribed for experienced workers.

(d) Dressmaking, tailoring and fur-sewing apprentices: A probationary period of one month for which no wages are stipulated is allowed, after which period an inexperienced female employee shall be paid at a rate not less than—

\$6.00 per week for the 2nd, 3rd and 4th months;

\$8.00 per week for the 5th, 6th, 7th and 8th months;

\$10.00 per week for the 9th, 10th, 11th and 12th months;

after which period she shall be considered experienced and shall be paid not less than the minimum rate of \$12.50 per week prescribed for experienced workers.

(e) Millinery apprentices: A probationary period of one month for which no wages are stipulated is allowed, after which period an inexperienced female employee shall be paid wages at a rate not less than—

\$4.00 per week for the 2nd and 3rd months;

\$6.00 per week for the 4th, 5th and 6th months;

\$8.00 per week for the 7th, 8th and 9th months;

\$10.00 per week for the 10th, 11th and 12th months;

after which period she shall be considered experienced and shall be paid not less than the minimum rate of \$12.50 per week prescribed for experienced workers.

This Order shall come into force on the first day of December, 1923.

ORDER No 2.—*Fixing Minimum Wage for Female Employees in Laundries, Dyeing and Cleaning Establishments.*

1. No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a laundry or dyeing or cleaning establishment at a rate of wages less than \$12.50 per week.

An experienced female is one who has completed the period of learning as specified in this Order.

2. The rate of wages for apprentices or learners may be less than the rate prescribed for experienced workers, and shall be in accordance with the following schedule, not less than—

\$9.50 per week for the 1st, 2nd, 3rd and 4th months;

\$10.50 per week for the 5th, 6th, 7th and 8th months;

\$11.50 per week for the 9th, 10th, 11th and 12th months;

after which period she shall be considered an experienced worker and shall be paid not less than the minimum rate of \$12.50 per week prescribed for experienced workers.

This Order shall come into force on the first day of December, 1923.

ORDER No. 6.—*Fixing Minimum Wage for Female Employees in Shops, Stores and Mail Order Houses.*

1. No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a shop, store or mail order house at a rate of wages less than \$12.50 per week.

(This Order shall apply to the sales force; the wrapping force; the auditing or check inspection force; the shoppers' force in the mail order department; the receiving, marking and stock room employees; sheet music saleswoman, and those otherwise engaged in the sale, purchase or distribution of any goods or merchandise.)

An experienced female is one who has completed the period of learning as specified in this Order.

2. The rate of wages for apprentices or learners may be less than the rate prescribed for experienced workers, and shall be in accordance with the following schedule, not less than—

\$7.50 per week for the 1st, 2nd and 3rd months;

\$9.50 per week for the 4th, 5th and 6th months;

\$10.00 per week for the 7th, 8th and 9th months;

\$11.00 per week for the 10th, 11th and 12th months;

after which period she shall be considered an experienced worker and shall be paid not less than the minimum rate of \$12.50 per week prescribed for experienced workers.

This Order shall come into force on the first day of December, 1923.

---

## WORKMEN'S COMPENSATION AND MINIMUM WAGE LAWS IN ONTARIO.

---

### Conference of Ontario Division of Canadian Manufacturers' Association

**M**EMBERS of the Ontario Division of the Canadian Manufacturers' Association held a conference at Toronto on November 27-28, to discuss subjects of special interest to manufacturers in the Province. The proceedings at this conference are fully reported in the December issue of *Industrial Canada*, a publication of the Association. Specially qualified speakers dealt with each subject, and their addresses were afterwards discussed and criticized from the standpoint of the employers. Among the speakers were: Mr. Samuel Price, K.C., chairman of the Ontario Workmen's Compensation Board; Dr. J. W. Macmillan, chairman

of the Ontario Minimum Wage Board and Mr. R. A. Stapells, manufacturers' representative on the same Board.

#### Workmen's Compensation

Mr. Price pointed out that the Ontario law of 1914 effected three main changes in existing compensation law, being the first law in Canada embodying all three features:

1. All accidents arising out of and in the course of employment, not merely those where the employer was at fault, are compensable. This feature is now almost universal, Prince Edward Island being the only province without such provision. Great Britain adopted

it years ago, and 45 of the United States now have it. Possibly more than twenty times as many workmen and dependents receive compensation now as would have received damages under the old law.

2. The liability of employers is collective instead of individual. Six provinces of Canada have this system, and eight American states have exclusive state fund systems working out in much the same way. Oother provinces and most of the states still have the individual liability system, while some states have also a state fund doing business concurrently with insurance companies.

3. Claims are adjudicated by boards instead of by courts. Six Canadian provinces now have boards; Quebec and Saskatchewan, like Great Britain, still deal with cases through proceedings in court; in the United States 35 states have boards, and 10 have adjudication by courts.

The speaker stated that the outstanding features in the Ontario Act were simplicity in its provisions and procedure, elimination of litigation and expense, and expeditious payments of compensation directly into the hands of injured workmen and their dependents. Apart from the expenditure for safety associations nearly 99 cents of every dollar paid by Ontario employers went directly for payment of compensation or medical aid. About 450,000 workmen were under the protection of the act; over \$20,000 a day was paid out in benefits; and more than 100,000 people, including workmen's families, received from the Board some part of their maintenance each year. In perhaps 99 per cent of the cases handled,

there was no trouble, no delay and little expense.

Referring to malingering, Mr. Price thought there was less than is sometimes alleged; the Board however takes precautions against imposition, depending largely upon the employer and the doctor. It was for the employer, he said, to see that none but reliable doctors were permitted to handle cases. The most serious problem in the administration of the act he declared to be the cases of "compensation neurosis", in which workers let their minds run on the idea of drawing benefits.

Less than one per cent of all accidents reported were death cases; about four per cent had some permanent disability; about half involved temporary disability only, and the rest involved either medical aid only or no payment. The records showed an increase in all accidents, but fatal and serious accidents were not increasing, and the increase in minor accidents might be attributed to more complete reporting.

He explained that the only real reserve fund under the Board was the disaster fund which was built up from one per cent of the assessments and now amounted to \$269,000. This fund had been drawn upon only three or four times, and was regarded as a safety fund.

In the discussion which followed this address it was suggested that workmen should be required to contribute to the compensation funds, or to medical aid, as this would tend to make accidents less frequent, and would discourage malingering. It was also suggested that there should be a further extension of the system of merit-rating of

employers, that there should be a panel of doctors and regulations governing medical attendance, that the employers, who were taxed, should be directly represented on the Board; that employers should not be held liable when employees were injured through their own carelessness.

Replying to the suggestion as to workmen's contributions Mr. Price stated that Alberta and British Columbia required workmen to contribute for medical aid. On its face the plan had much to commend it, but he thought it would not be effective in connection with a central board, as it would involve exceedingly complicated proceedings. He suggested that collusion would result from requiring workmen to pay part of the doctor's bills. The appointment of a panel of doctors might render the profession antagonistic. Merit rating was a subject for the employers themselves to consider. He recommended the employer to exercise his privilege of sharing in the selection of a doctor.

#### Minimum Wages

Dr. Macmillan said he had never met the manufacturer who did not approve of the principle underlying minimum wage legislation, which was to secure living wages for certain classes of workers. He traced the Ontario law to the recommendations of the National Industrial Conference, which met at Ottawa in September, 1919, and which unanimously favoured the fixing of minimum wages for women and girls. During the three years' existence of the Minimum Wage Board twenty-nine orders had been issued. Every one of these

orders had been made with the support of the employers. There had been no controversy within the Board; everything had been done unanimously, and the chairman was never called upon for a casting vote.

Mr. Stapells, one of the employers' representatives on the Board, said that he had at first been opposed to minimum wage legislation, but was now strongly in favour of it. The Board had never really fixed a minimum rate; the employers and employees, who had been called in for consultation, virtually fixed the rate themselves. From his experience with the Board he declared that at least 80 per cent of the employers were found to be paying above the minimum rate fixed by the Board. The Board had not been obliged to prosecute in a single case, one letter being usually enough to correct abuses. Employers who paid decent wages welcomed the legislation as tending to force competitors paying low wages to bring their wages up to a competitive level.

In the discussion which followed the addresses by Dr. Macmillan and Mr. Stapells it was explained that the permit system, under which the Board had discretionary power to allow wages below the required minimum to be paid in certain cases, applied to old people, or to deformed or mentally deficient persons whose services could not come up to the standard of work for which the minimum wage was fixed. In connection with piece workers the principle was followed that so long as 80 per cent of the workers in a plant earn the minimum rate the remainder could be left to take what they could get.

PRODUCTION OF STAPLE COMMODITIES IN BRITISH COLUMBIA

Comparative Statistics for the years 1922 and 1916.

THE Minister of Finance of British Columbia, in reply to questions in the legislature during the session just concluded, gave the information summarized in the following table, which shows the growth of various staple industries in the province in 1922 as compared with 1916.

PRODUCTION AND VALUE OF CERTAIN STAPLE COMMODITIES IN BRITISH COLUMBIA IN 1922 AND 1916.

Industry	1922		1916		Percentage increase in production
	Quantity	Value	Quantity	Value	
Pork .....	lbs. 1,240,000	\$ 136,400	lbs. 702,000	\$ 108,000	76.6

Cleaners and pressers.....	9	33	Second hand dealers.....	8	4
Drug stores.....	13	6	Tailors .....	28	15
Dry goods stores.....	12	15	Wholesale dealers.....	11	15
Expressmen .....	19	21			

## INDUSTRIAL CONDITIONS IN THE UNITED STATES COAL INDUSTRY

### Further Reports of the United States Coal Commission

**T**HE United States Coal Commission has issued further reports in addition to those which have been summarized in various previous issues of the LABOUR GAZETTE.\* These reports have

reference to "Causes that Induce Strikes", "Bituminous Mine Workers and their Homes", "Wage Rates in the Anthracite Industry", and "Irregularity of Employment in the Coal Industry".

#### Causes which Produce Strikes

In its report on the causes of strikes, the Commission finds that a large part of the friction that has caused stoppage of production and frequently resulted in violence and bloodshed has arisen from:

1. Disputes as to what are popularly known as the civil rights of American citizens.

2. Practical breach of these rights in the operation of the industry, even when they are theoretically acknowledged.

3. The inappropriate application to present conditions of principles enunciated under totally different economic conditions.

4. Attitudes of public opinion produced by ancient grievances.

5. Lax administration of the law induced through fear, favour, affection, malice, hatred or ill-will.

6. Unwise even though lawful interference of strangers in local conditions.

7. The effect of universal suffrage upon law administration.

The Commission does not attempt to fix the ultimate responsibility for these strikes but declares that "many, if not all, on both sides are at fault and all have some excuse arising from the weaknesses and passions of human nature".

An account is given in the report of the circumstances leading up to the bloodshed at Herrin, Illinois, and of the conditions in the coal fields of West Virginia where there have been serious labour troubles.

In the opinion of the Commission certain standards should be adopted under

\*See Labour Gazette, November, 1923 page 1255 and previous issues.

which controversies should be submitted to voluntary arbitration and the principles governing arbitration should be included in the contracts between the operators and miners. "Public interest", states the Commission, "demands that certain fixed principles shall be recognized by both capital and labour.."

1. No contract is of any valid binding force and effect in America which has not been freely and voluntarily entered into. No law could, therefore, be enacted compelling the making of contracts or fixing the terms and conditions thereof. But when once executed, contracts should be mutually binding upon the parties thereto, and each should be required to scrupulously preserve the same or be responsible to the other party in damages for the breach thereof.

2. The right of a man to work when, where, for whom, under what conditions and at what wage he chooses, so long as he elects to assert his individual right, must never be interfered with and the state must furnish him protection and peace while he exercises this right.

3. In a free government men have a right to combine themselves together in organizations for collective bargaining with reference to terms and conditions under which they will work. They must exercise this right without force and intimidation, gathering into their ranks those who voluntarily desire to become members of the association, but they must not, by coercion, duress, restraint, intimidation, or any species of violation of the criminal laws of the land, interfere with the right of the man who chooses to dispose of his time individually.

4. When society consents to the formation of corporations of capital to engage in business, and grants the right of labour to collec-

tively bargain with reference to wages and working conditions touching any of the prime necessities of life, and particularly with reference to that great public necessity, coal, society has a right to fix a limitation beyond which it will not permit either these *de facto* or *de jure* organizations to go. The public welfare is the thing to which private interests, as exercised through corporate organizations, must yield a certain measure of the inherent right of the individual. Therefore, a corporation, which is a creature of the state, must not be permitted to break up a *de facto* organization of labour in other ways than by argument and advice. Nor must it be permitted to prevent its employees from voluntarily organizing for lawful purposes. On the other hand, labour organizations must not attempt in other ways than by peaceful argument to induce men to join the union.

5. Society ought not to shift its moral responsibility to look after its unfortunates on to individual persons, firms and corporations, but government ought not, and presumably does not, authorize the combination of capital, whether into partnerships or corporations, without the implied duty upon the part of such partnerships and corporations to pay to the humblest of its workers who is able-bodied, willing and competent, and who gives a good honest day's work in an occupation that may properly be considered a man's job, sufficient wage to enable that person and his family to live in accordance with the standards of American life, and to pay in addition thereto for skill and experience and with reference to the irregularity of employment, and when thus it has provided for skill and experience, no organization or group has the right to hamper the initiative of the individual, preventing him from making all the money he can.

Recognition of the principle that wages should be sufficient to maintain an American standard of living does not imply approval of any particular current estimate of its cost, or that any stated income will insure such a standard in different localities where not only the cost of necessities but the habits and traditions of the people may differ in varying degrees.

6. The necessities of life are not obtainable from year to year at even a fixed price, eliminating the fluctuating purchasing power of the dollar. These fluctuations affect the industry no more than they affect the general public. The general public, commonly called the consumer, has a right to demand of its government that it shall not freeze in the midst of an

abundance of coal. Unless, therefore, the capital and labour invested in this industry shall of its own volition adopt methods that will furnish to the public coal when needed, an outraged public sentiment will furnish the supply by either the army or the penitentiary.

While negotiations are pending looking to a new contract, sixty days before the date thereof the President of the United States should be informed of the facts and principles in controversy, and should appoint some disinterested person to make a report upon these facts and principles so that the public may know whether the operator is receiving a reasonable return upon his investment, the wage earner a living commensurate with American standards, and, if not, who is to blame.

7. When contracts have once been voluntarily entered into, the enforcement thereof should not be left to strikes or lockouts, but the industry itself should provide boards of arbitration—local and appellate—to speedily dispose of these causes in accordance with the terms of the contract and the principles herein set out. . . .

The Commission condemns equally that lax local government which has seemed to render it necessary for the owner of property to police it at his own expense and in the event of strikes to bring in professional strike breakers who are frequently better gunmen than they are labourers, and the exercise of that right which inherently belongs to an American citizen, namely, that of a stranger voluntarily walking into a community, hiring a hall, and giving that community a lecture on what its rights and duties are. Many good intentioned people, seeking to serve the common weal, have unwittingly contributed more to crime than to character-making.

And finally, if neither the patriotism, private conscience, nor business common sense of the industry shall lead all persons engaged in it not only to observe the law but to help enforce the law; and if state and local authorities shall be impotent in prosecuting and convicting violations thereof, then it is the solemn duty of the Congress of the United States to assume jurisdiction over these American rights, bringing the full power of the union to their preservation by the prosecution and conviction of all persons, whether high or low, who shall dare to violate them.

The legislative, judicial and executive branches of this government must not permit a union of operators, a union of miners nor a union of both to become greater than the Union of the States.

#### Bituminous Mine Workers and their Homes

The Commission's report on the bituminous mine workers and their homes embodies the results of three distinct

field investigations and a tabulation of census data hitherto unutilized. From the nature of the industry it follows

that the mine workers must frequently live far from any normal centre of population and they are, therefore, dependent to a great extent on their employers, not only for the conditions under which they work, but also for the character of the houses in which they live and for the resources and atmosphere of the community of which they are a part.

The data derived from the census show the number of coal miners in each state, their ages, nationality, domicile, marital status and size of families.

An examination of house leases used by coal companies in West Virginia, Pennsylvania and Ohio shows that they do not differ materially and that they contain the following provisions:

1. The lease terminates automatically when- ever the mine worker ceases, from any cause whatsoever, to work for the coal company.
2. The lease can usually be terminated by either party, ordinarily upon five days' notice.
3. The company legally may put the mine worker and family out of the house at the termination of the lease without prejudicing its claim for any rental arrears and without incurring liability for damage resulting to the mine workers' belongings through eviction.
4. The company may pay itself out of mine workers' wages for rent due and also for damages to property. The company may also, according to some leases, withhold all unpaid wages at the termination of a lease, until the premises are surrendered. According to others, the company may retain permanently \$2.00 for each day the premises are occupied by the mine worker or his family after the termination of the lease.
5. The company reserves the right to enter and inspect the premises at any time and to make and enforce rules and regulations affecting the streets or roads upon which the premises abut.
6. The mine worker, according to some leases, must not entertain or harbour upon the premises persons objectionable to the company. Some leases stipulate that neither lodgers nor boarders can be taken into the mine worker's family unless they work for the company. Other leases provide that the mine worker's rights in the premises are only those of ingress and egress for himself and the members of his immediate family. Some stipulate that the lease does not create the relation of landlord and tenant, and commit the tenant to a waiver of all laws covering tenant's rights.

With regard to these leases the following comments are made:

Quite aside from the moral right or wrong of these provisions, and quite apart from the question as to whether they were inserted in the interest of law and order or to insure a more effective control of labour supply, the legal insecurity of house tenure, and the marked limitations upon dominion of premises during tenure, are factors which cannot be ignored when comparing values received for rentals paid for company-owned and for non-company-owned houses. The insecurity of tenure is particularly important in view of the provision that when a mine worker loses or gives up his job "for any cause whatsoever" he loses the right to occupy his house from the day he ceases to work. A sudden altercation with the mine boss may end in discharge and simultaneous loss of shelter for the mine worker's family. Some operators contend that "these provisions" are "mere forms" and of no importance. This contention seems inconsistent with the declarations as to the need of inserting the provision. However that may be, none of the agents engaged in this investigation reported the eviction of a man who had ceased to work because of illness. They found that it was not only usual to let the family remain in the house during slack work but that frequently the rent was allowed to run until better earnings permitted the men to catch up with expenses; and that the families of mine workers who had been killed in the mines were sometimes allowed to live on indefinitely in the company houses. This policy did not apply in case of cessation of work for such causes as voluntary withdrawal or discharge. Whatever the company does in times of sickness or other misfortune is so much mercy or benevolent tolerance. It is not right which the mine worker can claim for himself and his family under the tenancy laws of the state.

In this insecurity of tenure the wife and children of the mine worker are at least equally concerned. Loss of work, meaning cessation of income, is bad enough by itself, but here it means also loss of shelter and the expense of moving. Whether or not the companies have gone further than is necessary to reserve the houses for mine labour, it is at any rate in the interest of the mine worker and his family that the terms of occupancy of company houses, especially if there are no other houses available, should be clearly explained to the mine worker and his wife before bringing them from any considerable distance.

The following suggestions are made for the improvement of the environment of mining communities:

Provision for a charge-house and bath-house for employees is a simple method of promoting personal and civic pride. However, a bath

house is vacant a considerable portion of the time and might be made available for the women and children at stated intervals without interfering with the efficient operation of the mine. Moreover, it would be a comparatively simple matter in many of the patches to provide a central clothes-washing station. The opportunities for securing water easily and disposing of dirty water without creating a nuisance are distinct advantages. . .

In each community at least one person should be definitely charged with the responsibility of providing an ample supply of safe water. In the larger towns this task usually falls to the superintendent of the water works system. However, this employee could well be guided and assisted by private or state sanitary engineers. In the case of small towns which have no public supply of water a mining engineer would appear to be a fitting supervisor.

In safeguarding the water supply the assistance of the State Board of Health, State Geological Survey and other organizations should be sought. When dependence is placed upon shallow wells, cisterns or springs, a public supply being lacking, a competent engineer should be retained for the purpose of providing a public supply of safe quality. Such an engineer should work in co-operation with the State Board of Health. . .

No matter how small the community it is always possible to designate a responsible person to act as health officer or sanitary inspector. When insistence is placed upon regular and frequent inspections, written reports and prompt action looking to the correction of defects, results of a tangible nature are certain to follow. It is also possible, even in a small community, to establish a health office, in which all public health interests may be centered. In this place, even though it be only a drawer in a desk, should be kept all morbidity, mortality and birth records. Moreover, these records should receive the benefit of simple compilation and study.

A board of health composed of three members is also possible even in a mining camp and such an organization should always be effected. The members of this board should

be active, interested and willing to work in the interests of the people of the community. Whenever practicable, a trained whole-time public health nurse or sanitary inspector should be employed. Many places that could well afford to employ whole-time, trained health officers are still without the services of such an official. When, for financial reasons, it is not feasible to employ a health official, the position might well be combined with that of marshal, the title of sanitary policeman being used.

Interest and activity on the part of the board of health and the health officer should be maintained and stimulated by frequent conferences with skilled sanitarians, preferably from the state department of health. Sanitary surveys of each locality should be made and insistence placed upon the correction of obvious defects.

Interest in public health work should also be created in each community through addresses given by public health workers imported for the purpose. Demonstrations are now recognized as the most practical means of gaining intelligent interest. In order that the measures invoked for the better control of communicable diseases may increase in efficiency it is necessary that increased attention be devoted to the prompt isolation of persons suffering from suspicious illness, as well as placarding, quarantining of premises, and especially the follow-up of all disease "contacts" and "carriers". . .

In conclusion it may be said that while the general sanitation of coal patches is relatively low that the situation is not without definite possibilities for improvements. The absence of an official agency to which the company or municipal official may turn is one of the glaring deficiencies of the present situation. To supply this need it is suggested that a division of community sanitation in the Bureau of Mines of the Interior Department or a similar division in the Public Health Service could render extremely valuable service.

The report also discusses retail prices and the cost of living of miners' families in various localities.

#### Wage Rates in the Anthracite Industry

The report of the commission on wage rates in the anthracite industry was in part as follows:

Anthracite coal mining, much more so than bituminous, is a manufacturing as well as an extractive industry. The anthracite product as it comes from the mines commonly contains large quantities of slate, rock and other impurities. The coal, therefore, must be sent through an elaborate mechanical process by which the refuse is removed and the coal is

broken into various specified sizes. Because of the work involved in preparing anthracite coal for the trade, and also because of the more complex systems of mining necessitated by the pitching seams, the depth of the mines, the presence of water and the general geological structure of the coal beds, more men are needed in this industry to produce a ton of coal than is generally the case in bituminous mining.

The wage earners employed in the one hundred odd occupations of an anthracite

colliery are usually grouped into one of two classes; those whose working places are underground in the mine proper, generally called inside men, and those whose working places are on the surface, commonly referred to as outside men. In 1922, of the 159,880 wage-earners in this industry, about 72 per cent were inside men and approximately 28 per cent worked on the surface. . . .

Of the 115,288 wage-earners who were employed inside the mines in 1922, approximately 60 per cent were mining coal. In other words, six out of every ten men employed inside the mine were doing the actual work of drilling the coal, shooting it down, and loading it into the mine cars. Four out of every ten men were engaged in the work of transporting the coal to the surface, as maintenance of way men or in keeping the ventilation system in operation. . . .

The 44,592 outside employees are scattered among a large number of occupations. The largest group are the various engineers and the firemen who constitute 12.6 per cent of the total outside force. The slate pickers, including both men and boys, are second in importance and represent about eleven per cent of the outside wage-earners. . . .

The employees in the anthracite industry are further classified into tonnage men and company men. By tonnage men is meant those workers who are paid contract rates based upon a unit of work. . . . In many collieries the payment is by the car. In other instances the payment is at so much per yard, i.e., for each linear yard the chamber is advanced the miner is paid a fixed rate. . . .

The remaining wage-earners are generally referred to as company men. Most of these workers are paid on an hourly basis. In some instances daily, weekly or monthly rates are paid, but in many of these cases this is merely a nominal rate. It should be noted that the only workers actually producing coal in this group are the company miners and their labourers, and also the consideration miners and their labourers, who in most instances are paid by the day or hour.

Out of 159,880 wage-earners employed in the anthracite industry in 1922, 69,636, or approximately 44 per cent, were engaged in cutting, drilling, shooting or loading coal. It is interesting to note that in the bituminous industry the percentage of men actually mining coal is far greater, constituting almost three-fifths of the employees. . . .

A schedule requesting the hourly rates and the length of the basic working day of the men

employed in 54 day occupations and their subdivisions was forwarded by the Commission to all the operators in the anthracite industry of Pennsylvania. By June 20th, filled in schedules had been received from 180 collieries. The rates paid to 53,159 company men and boys as shown on the second payroll of March, 1923, were thus submitted to the Commission. . . .

Of the 53,159 men reported for the anthracite fields as a whole, 24,087 or 45.3 per cent were outside men and 29,072 or 54.7 per cent were inside men. Taking all the occupations for the industry as a whole, the hourly rates for all men employed, range from 23 cents an hour to \$1.11 an hour. The significant range, however, was from 27 to 71 cents, only one employee being reported as having received less than 27 cents and only 977 above 71 cents. Of the employees whose hourly rates were above 71 cents, only 26 were above 89 cents.

An analysis of these wage data shows that the 53,159 workers fell into four groups. There were 5,013 men receiving between 27 and 39 cents per hour; 392 receiving between 39 and 51 cents per hour; 46,776 receiving between 51 and 71 cents per hour and 977 receiving 71 cents or over per hour. Stated in approximate percentages, 9 per cent of the 53,159 employees received between 27 and 39 cents per hour, 1 per cent between 39 and 51 cents; 88 per cent between 51 and 71 cents and two per cent 71 cents or over.

Thus the great bulk of these employees, 88 per cent, received between 51 and 71 cents per hour. . . .

There were 5,405 workers, constituting slightly more than 10 per cent of the total number, who received below 51 cents per hour. Of this number 4,133 or 76.5 per cent were boys. Included in this number were about 3,000 slate pickers, who work in the breaker on the surface, and over 800 door boys who are underground workers, opening and closing the doors of the haulage ways.

Of the adult wage-earners, employed in the industry, approximately 95 per cent received hourly rates between 51 and 71 cents per hour. As most of these employees are on an eight-hour day, their daily rate may be computed by using eight as a multiplier.

A presentation of the rates paid to tonnage men was considered practically impossible as the unit of work on which the rate is based varied not only in the different coal fields but also from colliery to colliery and even within different sections of the same colliery.

#### Irregularities of Employment in the Coal Industry

The report on irregularity of employment in the coal industry is divided into two parts, one relating to the

bituminous coal industry and the other to the anthracite industry.

With regard to the bituminous mines

it is stated that during the last 32 years the average number of days worked per year was 213, or 70 per cent of a full time year of 308 days. Among the different mines there was a large measure of variability, some operating practically the whole year and others doing quite poorly. Statistics show that except as they have been disturbed by such catastrophes as the panic of 1893 and the Great War, the figures for days-worked in bituminous coal mines show no improvement during the last thirty-two years.

In the decades 1890-1899 and 1900 to 1909 the demand for coal increased

to so great an extent that had mine running time improved in equal degree, all intermittency of employment would have been wiped out, yet in the first of these decades there was an improvement of only eight days, and the second showed a falling off of twenty-five days. The growing spread between millions of tons produced and average days worked is said to be largely due to the opening of new mines and the employment of additional miners. Until the matter of expansion has been taken into account, no conclusions can be drawn regarding efficiency.

---

#### THE EMPLOYMENT SITUATION AT THE BEGINNING OF NOVEMBER, 1923, AS REPORTED BY EMPLOYERS.

**F**URTHER moderate declines were indicated in reports from employers of labour tabulated by the Dominion Bureau of Statistics at the beginning of November. The most important declines continued to be recorded in construction and saw milling operations, and employment in canning factories also showed a large seasonal reduction. The contractions during the period under review affected over 7,500 workers and caused the index number to decline from 99.5 on October 1 to 98.8 at the beginning of November; at the same period of last year it had stood at 95.8 and in 1921 at 90.2. The curve in the accompanying chart reflects the slightly downward tendency evidenced at the beginning of November, in contrast with the small upward movement indicated during the corresponding period of 1922. Nevertheless, employment continued to be in greater volume than in either November, 1922 or 1921.

Statement were tabulated from 5,890 employers of labour, with an aggregate payroll of 826,142 persons, of whom 812,201 were actually at work on November 1. At the beginning of October these same firms had 819,831

workers in their employ. The most pronounced contractions were those in construction, from which nearly 8,000 men were released, and in saw mills, which employed approximately 5,300 fewer workers than at the beginning of October. In addition, the completion of the season's work in a number of canneries caused considerable declines; asbestos mines, communication, steam railway operation, summer hotels and wholesale trade afforded less employment than in the month before. The losses in these groups were partly balanced by additions to staffs in logging (in which over 4,600 additional workers were employed by the firms making returns), in shipping and stevedoring, coal and metallic ores mines, as well as in textiles and some other branches of manufacturing.

The trend of employment in all provinces was downward; the losses in Quebec and the prairie provinces were most pronounced, while those in Ontario were very slight. In the Maritime provinces the greatest declines occurred in saw mills, highway and railway construction, in coal mining and in pulp and paper mills. On the other hand, substantial revival was indicated in

cotton factories; logging camps were decidedly busier, and improvement was also recorded in water transportation. The firms reporting in Quebec registered a net decline of practically 2,800 persons, this unfavourable balance being the result of fluctuations in many groups. Building contractors afforded a great deal more employment than at the beginning of October in an effort to complete work before the season ended, and shipping and stevedoring also showed largely increased activity. In addition, logging camps, textile works and glass factories registered considerable improvement. But the seasonal declines recorded in saw mills, highway and railway construction offset the above expansion, while paper, rubber, locomotive works, asbestos mines, quarries, railway transportation and wholesale trade reported less employment. The changes in Ontario were large also, but were more evenly balanced, to that the decline affected on the whole only .1 per cent of the payroll reported in October. Within the manufacturing division, textile, automobile, shoe, tobacco and photographic appliance plants reported increased activity, while saw mills, fruit and vegetable canneries, paper, rubber, glass, electric current, brass, bronze and copper works were slacker; the shrinkage in lumber mills and in canneries was, of course, seasonal in character. Communication, local transportation,

building, highway and railway construction moreover showed marked curtailment, that in the construction divisions also representing seasonal slackness. There was a decline of 1.6 per cent in the prairie provinces, most of which was reported by the construction and maintenance departments of the railways. Saw mills, railway car shops, building construction and summer hotels also recorded decreases in employment. On the other hand, biscuit and electric current factories, coal mining and transportation were busier. In British Columbia increases and decreases were on a smaller scale, but the resulting decline affected 1.9 per cent of the October payroll of the firms making returns. Fish and fruit canneries, saw mills, steel shipyards, building, highway and railway construction and trade afforded less employment, but logging, coal and metallic ore mines were busier. The following table shows the index numbers of employment in these districts as at November and October 1, 1923, and November 1922 and 1921.

District	Relative weight	Nov. 1st 1923	Oct. 1st 1923	Nov. 1st 1922	Nov. 1st 1921
Maritime provinces...	8.8	95.2	97.0	91.7	91.4
Quebec .....	28.0	103.2	104.0	92.7	87.5
Ontario .....	41.8	96.0	96.0	94.9	87.0
Prairie provinces....	13.0	99.2	100.7	105.0	102.6
British Columbia....	8.4	102.8	104.2	100.2	94.3
Canada.....	100.	98.8	99.5	95.8	90.2

An analysis of the returns by cities shows that of the six for which separate tabulations are made, Montreal only reported improvement; the declines in Toronto, Ottawa, Hamilton, Winnipeg and Vancouver were, however, on a rather small scale. Considerable additions to staffs were indicated in shipping and stevedoring in Montreal, while construction, cement and glass factories also were busier. On the other hand, sugar, tobacco and locomotive works were slacker. Statements were compiled from 731 Montreal firms with a payroll of 114,001 persons as compared with 113,685 on October 1. In Toronto, biscuit, confectionery, printing, textile, brass, bronze, copper and photographic appliance works afforded more employment than in the preceding month, and retail stores were busier. Agricultural implement works, telephones, transportation and construction on the other hand, showed contractions. The working force of the 804 firms reporting in Toronto declined from 98,520 persons on October 1 to 98,355 at the beginning of November. With the exception of fairly heavy losses in construction, the changes in Ottawa were slight. Reports were compiled from 126 employers whose payrolls, comprising 10,975 persons, were smaller by 287 or about 2 per cent than in the last report. The resumption of operations in cotton factories temporarily closed down at the beginning of October, caused large increases in the textile group in Hamilton, but this improvement was more than offset by reductions in canneries, electric current, iron and steel factories and in building construction. A reduction in personnel of 418 workers or 1.5 per cent was recorded by the 198 employers making returns, who employed 27,364 persons on November 1. Biscuit and electric current plants in Winnipeg reported increased activity, while railway car shops and building contractors showed some curtailment of operations. According to returns from 291 employers, their

payrolls, standing at 25,097 persons, were less by 127 than at the beginning of October. A general downward tendency was indicated in Vancouver, the largest losses occurring in fruit canneries, ship yards, water transportation and building construction. Statements were received from 222 employers with a total payroll of 21,294 persons as compared with 21,951 the month before. The difference represented a decline of three per cent. The following table shows the index numbers of employment as at October and November 1, 1923, and November 1, 1922.

City	Relative weight	Nov. 1 1923	Oct. 1 1923	Nov. 1. 1922
Montreal .....	14.0	99.1	98.7	92.6
Toronto .....	12.1	89.9	90.1	92.2
Ottawa .....	1.4	103.8	105.5	100.6
Hamilton .....	3.4	89.7	91.1	88.4
Winnipeg .....	3.1	88.6	89.4	99.5
Vancouver .....	2.6	98.6	101.6	94.9

#### The Manufacturing Industries.

With a few exceptions, the trend of employment in the various groups of manufactures was upward, but the losses (which were mainly due to seasonal causes), affected more workers than did the increases and there was a net decline of 3,883 persons or .9 per cent in the payrolls of the 3,852 firms reporting. Their payrolls aggregated 449,462 persons as compared with 453,345 on October 1. As already mentioned, saw mills continued to release large numbers of men, and canneries, both fruit and vegetable and fish, were slacker. Pulp, paper and rubber works also registered reductions in employment. On the other hand, fur, shoe, biscuit, confectionery, furniture, flour, printing, cotton and other fabric, hosiery, knitting, tobacco, automobile, machinery, sheet metal and photographic appliance factories were more fully engaged. A slightly upward movement had been evidenced during the corresponding period of last year, but the number of persons employ-

ed by the manufacturers making returns at that time was considerably smaller than for the period under review.

**ANIMAL PRODUCTS—EDIBLE.** — Fish canneries in British Columbia and the Maritime provinces continued to release workers, and dairies were slightly less fully employed, but abattoirs and meat packing plants were rather busier. The payrolls of the 152 concerns reporting aggregated 13,245 persons as compared with 13,517 in the month before. There was, therefore, a decline of 2 per cent which was rather larger than the seasonal reduction reported at the same period of last year when the index number stood slightly higher.

**LEATHER PRODUCTS.** — Further moderate improvement was indicated in boot and shoe factories at the beginning of November, mainly in Ontario. This increase, however, was less than that recorded during the same month of 1922, and employment then was in rather greater volume. Statements were compiled from 201 manufacturers in this group, whose staffs, aggregating 17,406 persons, were larger by 264 or 1.5 per cent than on October 1.

**FUR PRODUCTS.** — Continued expansion was registered in the fur industry, the 25 firms reporting having enlarged their working forces by 109 persons or 8.9 per cent. Their payrolls comprised 1,332 persons as against 1,223 in the last report. This increase was reported largely in Quebec, although there was also an upward tendency in Ontario. An increase of nearly the same amount had been indicated during the corresponding period of last year, when the index number stood slightly lower.

**LUMBER PRODUCTS.** — The employment afforded in saw mills showed another marked decline, while container and carriage factories also were slacker. Furniture works, however, reported an increase in payroll of 6 per cent, mainly

in Ontario. The declines in saw mills were general, but those in Quebec and Ontario exceeded the reductions registered elsewhere. According to returns from 734 lumber manufacturers, they employed 53,120 persons as compared with 58,401 at the beginning of October. There was, therefore, a contraction of 5,281 persons, or 9 per cent. The declines recorded during the month under review were somewhat larger than those reported during the same period of last year, but nevertheless the index number stands several points higher than at that time.

**PLANT PRODUCTS, EDIBLE.**—The completion of the season's operations in many fruit and vegetable canneries caused substantial decreases in staff in this group. Sugar refineries also were not so fully engaged, but flour mills, biscuit and confectionery works reported the addition of many employees to their working forces. The most pronounced reductions occurred in Ontario, but there were also decided declines in British Columbia. In the Prairie provinces, on the other hand, improvement on quite a large scale was recorded. The 295 concerns from which returns were received reported that they had released 1,037 persons; their payrolls on November 1 stood at 27,581 persons, whereas in the month before they had employed 28,618 persons. This was a decrease of 3.6 per cent, which caused the index number to be slightly lower than at the beginning of November, 1922. The declines recorded at that time had been much less extensive than during the present period.

**PULP AND PAPER PRODUCTS.** — Employment in pulp and paper mills suffered a 5.6 per cent reduction at the beginning of November, but there were gains in paper product factories and in printing and publishing houses that to some extent offset this decrease. There was, however, a net decline of 539 persons or 1 per cent in the payrolls of the 456 firms making returns. Their staffs on November 1 aggregated 52,628

persons. All provinces except the Prairie District shared in the recession, which, however, was heaviest in Quebec. The contractions reported during the period under review were the largest that have been indicated during 1923; the tendency during the greater part of the year has been decidedly favourable. At the beginning of November, 1922, there was a marked increase in activity, despite which the level of employment was several points lower than during the period being surveyed.

**RUBBER PRODUCTS.** — The production of footwear, tires and other rubber goods showed a fairly large falling at the beginning of October, when the 32 firms making returns reported a working payroll of 9,264 persons or 310 less than in the preceding month. The greater part of this 3 per cent decline occurred in Quebec and Ontario. Contractions had also been indicated at the beginning of November, 1922, when the index number had stood slightly higher.

**TEXTILE PRODUCTS.** — Considerable revival was shown in textile products, as a whole, although garment factories were slacker than in the month before. Cotton and other cloth factories, hosiery and knitting mills reported substantial increases in activity, which, however, were largely in the nature of recovery from earlier losses. Statements were received from 575 manufacturers employing 71,461 persons as compared with 69,331 on October 1. Manufacturers in Ontario reported over two thirds of this increase of 3.1 per cent, while a more favourable situation was also indicated in the Maritime Provinces and Quebec. Additions to staff of approximately the same size had been shown at the same period of last year, when the index number stood 2 points higher.

**TOBACCO, DISTILLED AND MALT LIQUORS.** — Fluctuations in this industry produced a net increase of .9 per cent, most of which occurred in tobacco factories. The payrolls of the 98 firms

making returns rose from 11,710 persons on October 1 to 11,820 during the period under review. There were increases in Ontario, the Prairie provinces and British Columbia, with offsetting declines in Quebec. The tendency at the beginning of November, 1922, had been unfavourable, and the situation then was not so good.

**ELECTRIC CURRENT.** — The number of persons employed in electric current works was somewhat larger than at the beginning of October, 151 persons having been added to the payrolls of the 87 concerns making returns. They employed 11,516 persons at the beginning of November, as compared with 11,365 in the month before. The greater part of this increase of 1.3 per cent was indicated in the Prairie provinces, but improvement also occurred in Quebec and British Columbia. On the other hand, Ontario firms registered some curtailment of operations. Employment in this industry was in greater volume than on November 1, 1922, when contractions had been indicated by the firms reporting.

**IRON AND STEEL.** — Employment in the iron and steel industry showed local fluctuations; substantial improvement was recorded in automobile factories, and there were additions to staffs on a somewhat smaller scale in machinery and sheet metal works as well as in some other branches of the industry. On the other hand, rolling and forging mills, agricultural implements, shipbuilding, iron and steel fabrication, railway car shops, foundries and machine shops were slacker. A total working force of 125,758 persons was reported by the 631 manufacturers making returns who had employed 125,172 workers on October 1. The difference represented a gain of .5 per cent. Employment in this industry in Ontario showed a substantial increase, but the general trend in all other provinces was unfavourable. Improvement on a very much larger scale had been shown at the beginning of November of last year,

but conditions then were much less favourable than during the period under review.

**MISCELLANEOUS MANUFACTURING INDUSTRIES.** — The workers laid off at the beginning of October in photographic appliance works in Ontario were re-instated during the period being surveyed. Sixty-four manufacturers in this division reported an aggregate working force of 3,930 persons, which was 204 or 5.5 per cent larger than in the month before.

#### Logging.

Further seasonal activity was shown in logging camps at the beginning of November, when 4,625 persons were added to the staffs of the 216 firms making returns. Their payrolls included 23,664 workers as compared with 19,039 the month before. Improvement was recorded in all provinces, but Ontario camps absorbed nearly two thirds of the increase of 24.3 per cent. Large though this expansion was, it was exceeded by that indicated at the beginning of November 1922, when there had been a gain of 47.8 per cent. The number of persons employed in logging by the firms making returns for the present month was somewhat less than at that period.

#### Mining.

**COAL MINING.** — Activity in the Maritime coal mines showed a further decline, while employment in the Prairie and British Columbia coal fields was in greater volume than at the beginning of October. Reports compiled from 92 operators showed 30,223 persons in their employ, as compared with 29,779 at the beginning of October. Coal mining was much less active than during the same period of last year; there had been at that time an increase of 7 per cent in the employment afforded.

**METALLIC ORE MINING** — Moderate improvement was indicated in metallic ore mines in British Columbia and Ontario in contrast with the declines that

were recorded during the corresponding period of the preceding year. The level of employment at the present time stands considerably higher than in November, 1922. The firms reporting for the present month, 49 in number, employed 12,433 persons as compared with 12,221 at the beginning of October. There was, therefore, an increase 1.7 per cent.

**NON-METALLIC MINERALS, OTHER THAN COAL.** — Asbestos mines in Quebec and quarries generally throughout the country were less fully employed, there being a decrease of 8.5 per cent in the employment afforded in this industry. Statements were tabulated from 69 concerns whose staffs, standing at 6,324, were smaller by 586 than in the month before. The index number in this group also was higher than at the same period of last year, when slightly smaller declines had been indicated.

#### Communication.

For the first time since January, the trend of employment in the communication group was retrogressive. This downward movement repeats that indicated at the beginning of November, 1922, when employment was in slightly smaller volume. The number of persons employed in communication on November 1, 1923, was 21,582 persons, whereas the 166 concerns making returns had employed 21,826 in the last report. The greater part of this 1.1 per cent decrease occurred on telephones in Ontario and the Prairie provinces.

#### Transportation.

**STEAM RAILWAYS.** — Contractions affecting 669 persons or .8 per cent of the October payroll were reported in this industry at the beginning of November. Statements received from 104 concerns and divisional superintendents showed that they employed 82,162 persons as compared with 82,831 in the preceding month. The largest declines were recorded in Quebec, while in the Prairie provinces there were moderate

increases. Substantial improvement had been reported at the same period of last year, but nevertheless the number employed in the operation department of steam railways at that time was a good deal smaller than in November, 1923.

**SHIPPING AND STEVEDORING.** — Further marked improvement was indicated in this industry at the beginning of November, mainly in Quebec, but also to some extent in the Maritime Provinces. A combined working force of 15,469 persons was indicated by the 62 firms making returns, who had employed 14,270 at the commencement of October. The difference represented an increase of 8.4 per cent. Although contractions had been indicated at the same period of last year, the index number then stood some 17 points higher than at the present time.

#### Construction and Maintenance.

**BUILDING CONSTRUCTION.** — Further though less extensive declines were reported by building contractors at the beginning of November. Returns compiled from 310 employers showed a total working force of 27,268 persons, which was smaller by 799 workers or 2.8 per cent than in the preceding month. Marked improvement was indicated in Quebec, while marked contractions took place in Ontario, the Prairie provinces and British Columbia. Rather larger losses had been registered at the same period of last year, when the index number was considerably lower than at the present time.

**HIGHWAY CONSTRUCTION.** — Employment on highways and roads declined largely, 3,087 persons having been released by the 91 employers making returns. Their staffs included 14,548 persons as compared with 17,635 on October 1, there was, therefore, a contraction of 17.5 per cent, which was somewhat smaller than that indicated on November 1, 1922.

**RAILWAY CONSTRUCTION AND MAINTENANCE.** — Another heavy decline was

registered in this industry, repeating the movement experienced at the corresponding date of last year. The shrinkage then, however, had been slightly less extensive and the index number stood somewhat higher. Thirty-three firms and divisional superintendents reported a total working force of 40,042 persons as compared with 44,131 on October 1. The declines (9.3 per cent of the October payroll) were fairly generally distributed over the country, but those in Quebec were the largest.

#### Services.

**HOTELS AND RESTAURANTS.**—Continued losses were indicated in summer hotels, chiefly in Alberta. Statements were received from 71 hotels and restaurants employing 7,257 persons as compared with 7,802 at the beginning of October. This seasonal decline affected about the same number of persons as that recorded at the same period of last year, when the level of employment had been somewhat lower.

#### Trade.

Employment in retail stores increased by .7 per cent, but there was a larger falling off in wholesale trade with a consequent reduction in payroll in the trade group as a whole of .2 per cent. According to returns from 562 firms, they employed 54,948 persons as compared with 55,055 at the end of October. The increases in retail trade were reported mainly in Ontario and Quebec, while the losses in the wholesale division occurred chiefly in Quebec, the Prairie provinces and British Columbia. Large additions to sales force had been indicated at the beginning of November, 1922, but the level of employment then was practically the same as for the present month.

The table on page 1410 gives the index numbers of employment by industries as at November 1 and October 1, 1923, and November 1, 1922 and 1921. The first column shows the proportion of employees in each industrial group in relation to the total number of workers reported in all groups for the month under review (Number of workers employed in January, 1920, equals 100).

---

### EMPLOYMENT OFFICE REPORTS FOR OCTOBER, 1923.

**T**HE volume of business transacted by the offices of the Employment Service of Canada during October, 1923, was considerably larger than during October of the previous year, while a decline over September, 1923, is indicated. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half month periods, shows an abrupt rise in the curves of applications, vacancies and placements, due to the increased call for thresher hands in various parts of Saskatchewan and Alberta. This was followed by a decided decline during the latter half of the month, marking the inevitable reaction of the post-harvest period. Indications from the

prairie provinces, however, would suggest that, owing to the large harvest yield, employment of thresher hands would continue for some weeks. It is of interest to note that the demand for thresher hands last year came during the latter half of October, due to the delay occasioned by poor weather. The seasonal demand for loggers and bushmen, which promises to provide employment for many this year, is responsible partially for the high level maintained by these curves. A summary of the reports from the offices shows that the average number of registrations for work was 3,126 daily during the first half of October, as compared with 2,265 during the preceding period and with

1,993 during the corresponding period last year. Applications during the latter half of October averaged 1,977 as contrasted with 2,913 during the same period a year ago. Employers notified the Service daily of an average of 3,002 vacancies during the first half and 1,754 during the second half of October, as compared with 1,700 and 2,600 vacancies daily during October, 1922. During the latter half of September, 1923, vacancies averaged 2,445 daily. Placements effected by the offices daily averaged 2,733 during the first half and 1,527 during the second half of the month, while during the same period in 1922, the average number daily was 1,565 and 2,445 during the first and second half of the month respectively. The average number of placements effected during the latter half of September, 1923, was 1,939. During the period under review the placements in regular employment averaged 2,379 and 1,217 daily, while those in casual work were 354 and 310 daily during the first and second half of the month respectively. The following table gives the placements effected to date by the offices of the Employment Service:

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923 (10 months).....	308,836	101,256	410,092

During the month of October, 1923, the number of references to employment was 59,101, while placements effected totalled 56,917. The placements in regular employment totalled 47,957, of which 44,417 were of men and 3,540 of women, while those in casual employment numbered 8,960. The offices received 56,709 applications for work from men and 11,613 from women, a total of 68,322 registrations. Employers notified the Service of 63,590 vacancies, of which 53,867 were for men and 9,723 for women.

Placements in regular employment by provinces were as follows: Nova Scotia, 662 men, 78 women; New Brunswick, 204 men, 181 women; Quebec, 1,984 men, 467 women; Ontario, 10,610 men, 1,376 women; Manitoba, 3,068

#### MARITIME PROVINCES

While the calls for farm workers were not numerous during the month, many apple pickers were placed from the office at Halifax. Outside construction work was progressing rapidly, street repairs, bridge building, road construction and hydro development, creating an active demand for labourers and teamsters, while many masons, carpenters and plasterers were required. At Moncton there was a call for a number of men for railway maintenance and construction. Toward the latter part of the period the logging group showed increased activity, with many enquiries for experienced men.

#### QUEBEC

Building and construction groups continued active, although the season's work on road and highway construction was nearing completion. Calls for building tradesmen and labourers were received with sufficient applicants available. Due to the slight slackening in other industries the large demand for bushmen and loggers was more easily met by the offices at Hull, Quebec and Montreal. In Montreal and Quebec boot and shoe workers were required, and paper workers for Three Rivers, while the metal trades absorbed a number of workers. Requests for longshore men and freight handlers were filled from the office at Montreal.

#### ONTARIO

Employment conditions on the whole were reported as better than at the same time last year. A brisk demand for farm workers was shown at Brantford, Peterborough, Hamilton, London and Toronto, with a few calls for apple pickers at Guelph and St. Thomas. At Chatham beet workers were required in increasing numbers. The building and construction group was active

although signs of slackening in outside work were in evidence. Highway and road construction was progressing steadily with an increased demand for labourers, teamsters and graders, to hurry the completion of work before the frost set in. At Windsor, Hamilton and Kingston, the supply of carpenters, bricklayers and masons, was in excess of the demand, but in other localities skilled building tradesmen were actively employed. The offices at North Bay, Fort William, Port Arthur and Sault Ste. Marie, reported a number of men despatched to railway construction camps, while section workers and extra gang hands were required at St. Thomas and Toronto. The large increase in vacancies in this province was due largely to the accelerated demand for bushmen for the camps in the northern districts. Many experienced tiemakers, pulpwood cutters, cordwood cutters and loggers, were transferred from Belleville, Windsor, Toronto and St. Catherines, to points in the vicinity of Cobalt, Port Arthur, Sudbury, North Bay and Timmins. Activities in the mining group were less brisk, only a few vacancies for machine runners for the lead mines being offered near Otawa. The metal manufacturing industries were operating with slightly reduced staffs, but at Guelph, Peterborough and Toronto, a number of calls were received and filled for woollen weavers and spinners, and garment and textile workers. The sugar beet industry at Chatham employed several factory workers. Sawmills continued busy, especially at Cobalt and Sault Ste. Marie. Although nearing the close of navigation many vacancies for marine firemen, wheelmen and coal passers, were filled at Fort William and Sarnia, while at Port Arthur the movement of grain created a demand for shovellers and labourers. The situation regarding domestic help remained much as previously reported with a slight increase in the vacancies for permanent positions.

## MANITOBA

There has been a decided drop in the number of orders for farm workers outside of the normal requirements for men for fall ploughing and permanent winter employment. A diminishing demand for trade mechanics was reported in the larger centres, while in the rural sections labourers, teamsters and graders, were required in increasing numbers to complete the work on telegraph, highway and road construction. Continued employment was afforded at Portage La Prairie and Winnipeg by the extension of city sewerage and street repairs. Little work was available in railway construction, there being only a few vacancies for extra gang hands and section men at Brandon and Dauphin. There was every indication that the demand for bushmen, tiemakers and pulpwood cutters, now very brisk, would be as keen as existed last winter. The offices at Dauphin and Winnipeg continued to despatch experienced lumbermen to points in Ontario, in addition to a large number of placements in the northern sections of Manitoba.

## SASKATCHEWAN

During the early part of the month threshing operations were very active with a greatly augmented demand for threshing hands. No difficulty was experienced in filling vacancies of all kinds, although as yet men were not willing to accept positions for ploughing and winter work. There was a good demand for building labourers and carpenters at Moose Jaw, Regina and Saskatoon, while road, highway and irrigation work, employed numbers of bridge workers, teamsters and graders at Yorkton, Prince Albert, North Battleford and Saskatoon. The number of vacancies reported in the logging group exceeded greatly the number offered last year at this time, though as yet there was little response to the demand as many workers would not be available until after threshing was completed. At Estevan a small

demand for miners was reported. The calls for domestic workers remained fairly brisk with a slight decline in the number of orders received from the rural districts.

## ALBERTA

With approximately fifty per cent of the threshing still to be completed there was an active demand for workers, with a good supply available at the offices. Vacancies in some districts continued to outnumber applications, while near Lethbridge and Medicine Hat men for fall ploughing and the winter were required. Employment in the construction groups was favourable. At Edmonton and Drumheller all building tradesmen were busy with a brisk demand for labourers for sewers, waterworks and road construction, but at Calgary and Medicine Hat little improvement was shown in the requirements in this group. A few workers for park improvement and for power plant construction were called for at Calgary. The demand for domestic workers showed a slight decline from the preceding period.

## BRITISH COLUMBIA

While the fruit picking and packing season is almost over there were a few requests for workers at the offices. Few calls for general farm labourers were received. The building and construction groups were very active. At Cranbrook, Nanaimo, Nelson and Victoria, continued employment of building mechanics was reported, while sewer construction, road work and power plant erection, called for many labourers, teamsters and graders at Nelson, Fernie, Kamloops and Vancouver. A scarcity of graders for railway work was reported, although only a small demand was registered in this group. Requests for tiemakers, pole cutters and bushmen were coming in in large numbers, with a slight scarcity of experienced workers. The mines at Cranbrook and Kamloops were in need of machine miners, drillers and tunnellers, and from Vancouver quartz machine miners were placed. The em-

ployment of women in domestic service was brisk, an increase being reported in the number of casual jobs offered.

#### The Movement of Labour.

During October, 1923, the offices of the Employment Service of Canada made 47,957 placements in regular employment, of which 22,837 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of these latter 5,931 were granted the Employment Service reduced transportation rate, 3,981 going to points within the same province as the despatching office and 1,950 to other provinces.

The offices in Quebec granted 498 transportation certificates, 225 to bushmen going to camps within the province and 273 to bushmen and mill labourers going to points in Ontario. The offices in Ontario despatched 2,051 workers at the special reduced rate, of whom 43 were bushmen going from Sudbury and Ottawa to camps in the Hull district. Of the provincial transfers, approximately 1,600 were bushmen and mill hands going to camps in the northern sections; about 150 were railway construction labourers bound for the vicinity of Port Arthur and North Bay; one was a miner going from Sudbury to Pembroke and 2 were miners transferred from Timmins to the Ottawa zone. A gas engineer, 6 marine firemen, 1 rivetter, 3 steamfitters, 8 carpenters and 4 bricklayers were transferred from North Bay, Windsor, Port Arthur and Fort William to various points within the province. The number of reduced rate certificates issued in Manitoba totalled 1,370, of which 122 were to persons going to points within the province; 4 were farm workers going from Brandon and Winnipeg to Calgary, Alta. Of the 43 transfers to Saskatchewan, 19 were miners going from Brandon and Winnipeg to Estevan, 18 were farm hands to Regina and Saskatoon. One labourer, 2 waitresses, 1 domestic, 1 blacksmith and 1 cook were sent to Prince Albert, Saskatoon and Regina.

To the district near Port Arthur, Ont., the Winnipeg office sent 1,201 workers, of which 1,146 were bushmen and mill labourers, the remainder including teamsters, painters and household workers. The offices in Saskatchewan placed 1,253 persons in employment at a distance, 63 harvesters and thresher hands going from Saskatoon and Swift Current to Calgary and Edmonton. Fifty-four bushmen, 1 moulder, and 1 pulpwood cutter were transferred to Winnipeg and Dauphin, Man., while to Port Arthur, Ont., 277 bushmen and millmen were from Moose Jaw and Saskatoon. The majority of the provincial transfers were harvesters and thresher hands, a few were miners, teamsters, labourers and cooks, the remainder being domestic and household workers. Of the 383 persons benefiting by the Employment Service reduced rate in Alberta, 25 bushmen, 3 millhands, 4 swampers and 1 stockman were sent from Edmonton to Prince George, B. C. More than 200 of the provincial certificates were issued to farm and thresher hands, about 90 to bushmen, 21 to miners from Calgary and Edmonton and the remainder to teamsters, labourers, carpenters, waitresses and maids. British Columbia offices issued 376 certificates, 5 of which were to farm hands and 1 to a teacher going to Drumheller and Calgary, Alta., and 1 to a machine tender transferred from Vancouver to North Bay, Ont. The Vancouver and Prince Rupert offices transferred more than 100 bushmen and tiemakers and approximately 200 labourers and railway construction workers to points near Prince George, Kamloops, Revelstoke and Penticton. To the Nelson district were sent 22 miners, the remainder of the workers including pole cutters, engineers, cooks and teamsters.

Of the 5,931 persons benefiting by the Employment Service reduced rate, 2,539 were carried by the Canadian National Railways, 3,280 by the Canadian Pacific Railway, 107 by the Temiskaming and Northern Ontario Railway, and 5 by the Pacific Great Eastern.

## BUILDING PERMITS ISSUED DURING OCTOBER, 1923

---

THERE was a slight decline in the value of the building permits issued during October as compared with the preceding month, and the value of anticipated building was also less than in October of last year. Reports were tabulated by the Dominion Bureau of Statistics from 56 municipalities which had issued permits to the value of \$9,701,080 in October, 1923, as compared with a total of \$10,485,613 in September, 1923, and of \$10,344,770 in October, 1922. There was, therefore, a decline of \$784,533 or 7.5 per cent in the former comparison and of \$643,690 or 6.2 per cent in the latter.

Forty-seven cities furnished detailed statements showing that they had issued approximately 1,400 permits for dwellings, estimated to cost nearly \$6,200,000, and for over 3,000 other buildings at a proposed cost of approximately \$3,400,000. It has been pointed out in previous months that, since the construction of several buildings is frequently authorized by one permit, the number of buildings to be erected is somewhat larger than the number of permits issued.

New Brunswick, Ontario and Saskatchewan registered increases in the value of the building authorized as compared with September. The gain of \$347,291 or 7.4 per cent in Ontario was actually the greatest, but the largest proportional increase (of \$46,445 or 95.6 per cent) occurred in New Brunswick. Of the decreases in the remaining provinces, those of \$448,288 or 38.3 per cent in British Columbia and of \$391,467 or 11.6 per cent in Quebec were the largest actual declines, while

the most pronounced percentage loss (61.9) was recorded in Alberta.

Quebec, Manitoba and British Columbia registered increases in the value of the permits issued as compared with October, 1922. The increase of \$703,423 or 30.7 per cent in Quebec was the largest actual gain, while Manitoba, where the value of the contemplated building increased by 46.3 per cent, showed the most pronounced proportional gain. Ontario, with a decline of \$1,250,760 or 19.9 per cent, recorded the heaviest loss, while that of \$185,525 or 67.2 per cent in Nova Scotia was also extensive.

Montreal, Winnipeg and Vancouver registered smaller totals of prospective building than in September, but the value in those three cities was higher than in October, 1922. In Toronto, on the other hand, the value of permits issued was greater than in the month before but less than in the corresponding month of last year. Of the smaller centres, Fredericton, Westmount, Guelph, London, Ottawa, Owen Sound, Peterborough, St. Catharines, Windsor, St. Boniface, Moosejaw, New Westminster, Point Grey and Victoria recorded larger totals of estimated building than in either September, 1923, or October, 1922.

The value of building permits issued during the first ten months of this year was slightly over 8 per cent lower than during the corresponding period of last year, but there was an increase of 18.5 per cent over the first ten months of 1921. The totals for 1923, 1922 and 1921 stand at \$115,326,634, \$125,458,106 and \$97,318,180, respectively.

The following table shows the value of the building permits issued during October, 1923, as compared with September, 1923, and October, 1922. The 35 cities for which records are available since 1910 are marked by asterisks.

## FAIR WAGE CONTRACTS, NOVEMBER, 1923

**D**URING November, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to thirty-six fair wage contracts awarded by the Department of Public Works. Thirty of the contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed. The remaining six contained fair wage schedules.

A statement was also received as to supplies ordered by the Post Office

Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

## DEPARTMENT OF PUBLIC WORKS

Electric wiring in public building, Souris, P.E.I. Name of contractor, W. P. Doull, Charlottetown, P.E.I. Date of contract, October 31, 1923. Amount of contract, \$670.

Alterations to heating system in Public Building, Weyburn, Sask. Name of contractor, J. C. Stewart, Weyburn, Sask. Date of contract, October 22, 1923. Amount of contract, \$2,460.

New roof on old Examining warehouse, Montreal, Que. Name of contractor, The Metal Shingle and Siding Co., Ltd., Montreal, Que. Date of con-

tract, November 5, 1923. Amount of contract, \$3,600.

Extension to public wharf, Meteghan, N.S. Name of contractor, S. F. Comeau and E. Gaudet, Comeauville, N.S. Date of contract, October 29, 1923. Amount of contract, 12 cents per cubic foot of cribwork complete.

Alterations to post office, Sussex, N.B. Name of contractor, Frederick Howland, Sussex, N.B. Date of contract, November 1, 1923. Amount of contract, \$3,974.

Reconstruction of south pier, Burlington Channel, Ont. Name of contractors, The Port Arthur Construction Co., Limited, Toronto, Ont. Date of contract, October 29, 1923. Amount of contract, unit prices as set forth in contract.

Reconstruction of portion of wharf, Sorel, Que. Name of contractor, Jackson Construction Co., Limited, Pierre-ville, Que. Date of contract, November 1, 1923. Amount of contract, unit prices, as set forth in contract.

Construction of basement floor and installation of hot water heating system in Post Office Building, Pierreville, Que. Name of contractor, F. D. Coron, Sorel, Que. Date of contract, November 2, 1923. Amount of contract, \$1,985.

Construction of pile wharf and approach, Grassmere, Ont. Name of contractor, Robert Carson, Midland, Ont. Date of contract, November 6, 1923. Amount of contract, unit prices as set forth in contract.

Construction of Wharf, Windsor, N. S. Name of contractor, A. E. Cunningham, Sydney, N.S. Date of contract, October 26, 1923. Amount of contract, unit prices, as set forth in contract.

Construction of wharf, Boischatel, Que. Name of contractors, J. R. and J. Elz., Boulanger, Montmagny, Que. Date of contract, November 7, 1923.

Amount of contract, unit prices, as set forth in contract.

Construction of public floating wharf, Harrop, B.C. Name of contractor, Geo. Henry Hope, Nelson, B.C. Date of contract, November 5, 1923. Amount of contract, \$7,150.

Construction of warehouse on government wharf, Sault Ste. Marie, Ont. Name of contractor, William George Reid, Sault Ste. Marie, Ont. Date of contract, November 5, 1923. Amount of contract, \$3,800.

Construction of wharf approach, St. Barthélemi, Grand Nord, Que. Name of contractors, F. A. Grothé & Fils, Montreal, Que. Date of contract, November 6, 1923. Amount of contract, unit prices, as set forth in contract.

Supply and installation of steel water tank, Quarantine Station, Lawlor's Island, Halifax, N.S. Name of contractors, Canadian Des Moines Steel Co., Limited, Montreal, Que. Date of contract, October 19, 1923. Amount of contract, \$7,980.

Alterations to boatman's cottage, Quarantine Station, Partridge Island, St. John, N.B. Name of contractors, Kane & Parker, St. John, N.B. Date of contract, November 6, 1923. Amount of contract, \$3,250.

Construction of wharf, Port-au-Per-sil, Que. Name of contractor, A. Mal-tais (La Malbaie, Que.) Date of contract, November 6, 1923. Amount of contract, unit prices, as set forth in contract.

Extension to breakwater, Thessalon, Ont. Name of contractor, V. T. Bartram, Toronto, Ont. Date of contract, November 8, 1923. Amount of contract, unit prices, as set forth in contract.

Repairs and addition to wharf, Ste. Croix, Que. Name of contractors, F. Beaumont & J. E. Collin, Montmagny, Que. Date of contract, November 7, 1923. Amount of contract, unit prices, as set forth in contract.

Repairs and addition to wharf, St. Antoine de Tilly, Que. Name of contractors, F. Beaumont, & J. E. Collin, Montmagny, Qué. Date of contract, November 7, 1923. Amount of contract, unit prices, as set forth in contract.

Construction of wharf, Porpoise Bay, B.C. Name of contractor, William Greenlees, Vancouver, B.C. Date of contract, November 5, 1923. Amount of contract, \$3,574.

Reconstruction of wharf approach at St. Sulpice, Que. Name of contractor, Hector Grenier, Repentigny, Que. Date of contract, November 10, 1923. Amount of contract, unit prices, as set forth in contract.

Improvements to wharf approach at Repentigny, Que. Name of contractor, Hector Grenier, Repentigny, Que. Date of contract, November 10, 1923. Amount of contract, unit prices, as set forth in contract.

Alterations to heating system in public building, Regina, Sask. Name of contractors, Vagg, Wilson & Co., Regina, Sask. Date of contract, November 13, 1923. Amount of contract, \$4,664.

Reconstruction of 478 feet of superstructure of East Pier of Eastern Channel, Toronto Harbour, Ont. Name of contractors, Port-Arthur Construction Co., Toronto, Ont. Date of contract, November 19, 1923. Amount of contract, unit prices, as set forth in contract.

Construction of protection wall, Terrebbonne, Que. Name of contractors, F. A. Grothé & Fils, Montreal, Que. Date of contract, November 20, 1923. Amount of contract, unit prices, as set forth in contract.

Alterations to heating system in public building, Lethbridge, Alta. Name of contractors, Walker and Holberton, Lethbridge, Alta. Date of contract, November 16, 1923. Amount of contract, \$6,740.

Reconstruction of wharf and repairs to approach thereto, Port Renfrew, B. C. Name of contractors, Vancouver Pile Driving & Contracting Co., Limited, Vancouver, B.C. Date of contract, November 10, 1923. Amount of contract, unit prices, as set forth in contract.

Dredging deep water berths and long wharf, St. John, N.B. Name of contractors, St. John Dry Dock & Shipbuilding Co., Ltd., St. John, N.B. Date of contract, November 24, 1923. Amount of contract, Class "B" 31 cents per cubic yard scow measure, and one cent for overtime.

Roofing of old bank building, Charlottetown, P.E.I. Name of contractor, Stanley Shaw and Pearden, Charlottetown, P.E.I. Date of contract, November 14, 1923. Amount of contract, \$2,800.

New stone chimney and repointing stone cornice of post office, Quebec, Que. Name of contractor, C. Emile Morissette, Ltée, Quebec, Que. Date of contract, November 20, 1923. Amount of contract, \$13,350.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

---

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Mining, Non-Ferrous Smelting, and Quarrying

**EDMONTON, ALBERTA.** — **NORTHERN ALBERTA COAL OPERATORS' ASSOCIATION AND THE EDMONTON AND DISTRICT MINERS' FEDERATION.** — Agreement to be effective from September 1, 1923, until June 30, 1924, and thereafter if thirty days' notice be given by either party.

Company to have right to hire and discharge, management of the mine, and direction of the working forces.

Company to recognize the Federation and not to discharge any employees or refuse work to applicants on account of affiliation with the Federation.

Members of the Federation may sign off to the Secretary of the Federation \$1.00 per month or less of their pay as fixed by the secretary, the amount to be deducted and paid to the secretary by the company.

Certain employees connected with management of mine are not to be members of or under the jurisdiction of the union, namely, — mine manager or superintendent, or their assistants, overman, assistant overman, pit bosses, fire bosses, boss driver, stable bosses, master mechanic, electricians, weighmen, head carpenter, head blacksmith, tippie or breaker foreman, loader boss, night watchman, outside foreman, and all other foremen, time keepers, coal inspectors and head lampmen.

Working conditions and general customs prevailing in the different mines to continue during the agreement.

Disputes or grievances arising under the agreement to be referred first to the pit bosses, overman or foreman of manager in charge where dispute arises, and, if settlement is not reached, to the pit committee of the respective mine, committee consisting of three men selected from the employees (one of whom may be a check weighman). Committee and mine superintendent or manager shall endeavour to reach a settlement, and if reached, decision to be final. Failing a settlement, matter to be referred to the president of the association and the president of the federation, who shall select one member from each party, thus forming a joint committee. If no decision is reached, committee to select an independent chairman, failing to do which, either party may apply for a Board of Conciliation. Work to be continued until final decision has been reached.

Any employee thrown out of employment by reason of lack of work to be given preference of reemployment.

**SCHEDULE OF WAGES:** — *Clover Bar Mines.* Day Wages. Above ground, per hour — boys, 30 to 40 cents; blacksmiths, 72 cents; carpenters, 70 cents;

engineers, hoistmen and firemen, 54 cents. Underground, eight-hour day—boys, \$3.60; chief cager, \$5.60; drivers, \$5.36; labourers, \$4.80; miners on company work, timbermen, tracklayers, \$5.60.

*City Mines.* Company work, per eight hour day — Miners on company work, brushers and tracklayers, drivers and chief cager, \$5; pushers and assistant cagers, assistant tracklayer, \$4.50; coupler (under 19 years), \$3.50. Per hour, boys under 18 years, on surface, 35 cents; outside labour, 50 cents; blacksmiths, 65 cents. Other rates in the agreement are contract rates, varying according to local conditions.

#### Manufacturing: Printing and Publishing

PRINCE ALBERT, SASKATCHEWAN. — TWO LOCAL PRINTING COMPANIES AND INTERNATIONAL TYPOGRAPHICAL UNION LOCAL 705. — Agreement to be in effect from October 31, 1923, until October 31, 1924.

Only good standing union members to be employed in departments under the agreement.

A joint standing committee to decide on questions about scale of prices and disputes regarding clauses of agreement, but local union laws not affecting hours or working conditions and laws of International Typographical Union not to be subject to arbitration.

Wages, per hour, day work, 90 cents; night work, 99 cents. Hours per week, day work, 44; night work, 42

Any office running over four machines to employ a machine tender. Machine operators to be paid \$3 per week over above scale for looking after own machines.

Hours per day, seven hours and twenty minutes. Overtime up to three hours in a day, time and one half, there-after, double time. Sunday work, double time. On morning papers, or night staffs of afternoon papers, Saturday

night work to be double time. Work on certain holidays time and one half, but on Labour Day, Dominion Day and Christmas Day, double time.

Learners on machines: No more than one learner to be employed in any office, and no regular to be laid off while a learner is working. Members of the chapel to be given preference in selection of beginners. If no journeyman is available, learner to be allowed to work overtime at overtime rate. Wages per week, for beginners on machine, first five weeks, \$15; next five weeks, \$20; next five weeks, \$28; there-after, scale. Learners working on night shifts, 50 cents per night above scale. Learners who have not attained given standard of efficiency as operators to be granted extension of time up to three months.

Apprentices: One apprentice to five or less journeymen. No apprentice to be employed on overtime unless journeymen in same office are also employed on the same shift.

Minimum age for apprentices, 15 years; qualifications, eighth grade examination, public school.

Scale for apprentices: first year, at option of office; second year, 30 per cent of scale; third year, 40 per cent; fourth year, 50 per cent; fifth year, 60 per cent. Night shifts, \$2.00 per week above scale. Term of apprenticeship, five years, from which six months may be deducted. Beginning with third year, apprentices to take the International Typographical Union course in printing.

A journeyman who has worked in an office fifteen days not to be discharged for incompetency, unless foreman has previously notified the chairman. No journeyman to be discharged in order to be replaced by an apprentice.

In consideration of use of the union label, employer to employ only union members.

VANCOUVER, B.C. — CERTAIN EMPLOYERS, AND THE VANCOUVER BOOK-BINDERS' UNION No. 105. — Agreement to be in effect from November 1, 1923, to December 31, 1924. Minimum wage per week, journeymen, \$42. Hours per week, 44. Overtime, to 10 p.m. and Saturday afternoon, time and one-half; after 10 p.m. and Sundays and holidays, double time. Union claims jurisdiction over certain classes of work. No member to work under a piece or contract system. Only union members to be employed, except when union cannot supply competent help.

Apprentices: One apprentice to four men; two to eight, and one to each additional five. In case of four men and only one apprentice being employed, an additional boy may work in shop when senior apprentice enters third year. During third year apprentice to receive not less than one-third of a journeyman's wage; fourth year, not less than one-half; fifth year, not less than two-thirds. Apprentices to work overtime only when journeymen are working.

Disputes to be adjusted by conciliation and arbitration.

Women's Section: Minimum wage per week, \$21. Hours, same as for men.

Jurisdiction claimed over certain classes of work. No work to be done under a piece or contract system. Only union members to be employed except when union cannot supply competent help.

Proportion of apprentices: One to the shop; one to three journeywomen; two to five journeywomen; three to nine journeywomen; one additional to each five journeywomen. Apprentices to serve two years.

Wage scale per week for junior women members: first six months, \$10; second six months, \$12.50; third six months, \$15; fourth six months, \$17.50; after two years, \$21. Apprentices not to work overtime except when journeywomen are working.

Conciliation and arbitration to govern adjustment of disputes.

#### Construction: Buildings and Structures

OTTAWA, ONTARIO, AND HULL, QUEBEC. — CERTAIN CUT STONE CONTRACTORS, AND JOURNEYMEN STONE CUTTERS' ASSOCIATION OF NORTH AMERICA, OTTAWA BRANCH. — Agreement signed by certain firms and in the case of others, wage rates in effect, although agreement not signed. Agreement to be effective from November 21, 1923, to April 30, 1924.

Only union members to be employed under the agreement, provided such can be supplied by the union; in case of union failing to provide help, non-union men may be hired, and shall join the union.

Wages per hour, \$1.00. Wages to be paid twice monthly. Hours of labour; eight per day and four on Saturdays. Overtime only in cases of absolute necessity and at time and one-half for first two hours and double time thereafter. Proper accommodation to be provided in all yards. Certain holidays to be observed and others to be optional.

All differences and grievances arising during the life of the agreement to be submitted to an arbitration committee of three. On failure to agree, committee to select an umpire whose decision shall be binding.

Employer may employ one apprentice for five or less journeymen and one additional for each additional five, but no more than three to a shop. Apprentices to serve four years at wages mutually agreed upon.

Employer may instal air hammer when he deems it necessary. No interference with workmen during working hours. Workmen may work for whomsoever they see fit and employers may employ and discharge whomsoever they see fit.

Either party wishing to alter the agreement must give one month's notice

of change prior to expiration of the agreement.

**Transportation: Street and Electric Railways**

VANCOUVER, B.C. — THE BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY, LIMITED, AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA. — Agreement to be in effect from September 1, 1923, until September 1, 1924, and thereafter until changed on 30 days' notice.

Agreement to govern all employees of the company except conductors, motormen and trainmen on Lulu Island Branch, Fraser Valley Line and Saanich Division.

Wages per hour: motormen and conductors on city and suburban lines, first six months, 52 cents; second six months, 56½ cents; third six months, 59½ cents; thereafter, 62 cents. One-man car operators, 68 cents. In work train service, 2 cents per hour additional. On interurban lines: per hour —passenger motormen and conductors, first six months, 52 cents; second six months, 57½ cents; third six months, 61 cents; thereafter, 64 cents. Freight motormen and conductors, first six months, 55 cents; second six months, 60 cents; third six months, 64 cents; thereafter, 66½ cents. Passenger brakemen, first six months, 52 cents; second six months, 55½ cents; third six months, 58½ cents; thereafter, 61 cents. Freight brakemen, 62 cents; trolleyman, 60 cents.

Sunday work: time and one-quarter; holidays, time and one-half. Extra men, minimum of \$87.50 per month.

*Shop and Barn Men:* Per hour; motor car repairers and freight car repairers, first six months, 55 cents; second six months, 59½ cents; third six months,

62½ cents; thereafter 65 cents. Armature winders' helpers, blacksmiths' helpers, carpenters' helpers, machinists' helpers and sawyers, first six months, 50½ cents; second six months, 55 cents; third six months, 58 cents; thereafter, 60½ cents. Barn janitors and car cleaners, first six months, 48 cents; thereafter, 54 cents. Machinists, blacksmiths, 74 cents; painters, carpenters, 71½ cents; air brake fitters, car wiremen, 69 cents; trolley retriever repairer, 67½ cents; freight car inspectors, babbitter, 67 cents; freight car carpenters, 65 cents; freight car painters, 58 cents; brush hands, freight car repairers' helpers, 55 cents. Armature winders: first class, 74 cents; second class, 69½ cents; third class, 67 cents. Leading hands, 3 cents per hour extra.

*Apprentices:* Per hour; first year, 31 cents; second year, 35½ cents; third year, 41½ cents; fourth year, 46 cents.

*Freight Shed Department:* Per hour; checkers, 56 cents; truckers, 53½ cents; others, per month.

*Track Maintenance Men:* Per hour; interurban, first three months, 47 cents; thereafter, 51½ cents; City, first three months, 51½ cents; thereafter, 56 cents; foreman paid per month. Track welders: per hour, 67½ cents; track welders' helpers, 58 cents. Bridge and building master's maintenance gang, including carpenters and pipefitters, per hour, 69½ cents. Station agents and other miscellaneous employees are paid by the month.

Working conditions are the same as those in the previous agreement, as outlined in the LABOUR GAZETTE for March, 1923.

*Transportation: Steam Railways.* An agreement regarding railway shop employees is described in the article following.

## REVISION OF AGREEMENT BETWEEN THE RAILWAY ASSOCIATION OF CANADA AND EMPLOYEES IN RAILWAY SHOPS

### Supplement A to Wage Agreement No. 6.

ON November 26, 1923, committees representing the Railway Association of Canada, which includes the principal railways of Canada, and the employees in railway shops, members of Division No. 4, Railway Employees' Department, American Federation of Labour (Federated Shop Crafts), including machinists, boilermakers, blacksmiths, car men, electrical workers, sheet metal workers, etc., reached an agreement regarding changes in Wage Agreement No. 6, and Supplement A thereto was, accordingly signed providing for certain changes in working conditions.

This agreement was one in a series entered into between the Railway Association of Canada, successor to the Canadian Railway War Board, and certain organizations of railway employees. Agreement No. 1, the first of the series, was entered into on September 2, 1918, and dealt with the working conditions for shop crafts. Agreement No. 4 entered into on November 12, 1919, a revision of Agreement No. 1, was published in the LABOUR GAZETTE for December, 1919. The rates of wages provided for in these agreements were altered from time to time by supplements and revisions, described in the LABOUR GAZETTE for April, 1923\*. The working conditions provided for in Agreement No. 4 were altered by a revision effective on May 22, 1922, described in the LABOUR GAZETTE for July, 1922. The principal changes were in rates of pay for overtime and holiday work.

On July 30, 1923, the representatives of the railway shop employees (Division No. 4, Railway Employees' Depart-

ment, American Federation of Labour) began negotiations with the Railway Association of Canada for a new schedule of wages and working conditions. They asked an increase of 10 cents per hour, restoration of time and one-half payment for overtime on all Sundays and holidays, and the abolition of paint-spraying machines, together with other changes. These negotiations were completed toward the end of November by the signing of Supplement "A" to Wage Agreement No. 6, making certain amendments to the main agreement, effective December 1, 1923.

No general increase of wages results from the supplementary agreement, but certain classes of employees obtain increases of varying amount. Wheel-pressers and beltmen are granted 2 cents per hour above the rates effective under Wage Agreement No. 6. Though paint-spraying machines are not abolished, those who use these machines are henceforth to be paid the carmen's rate of 63 cents per hour instead of helpers' rate of 47 cents. "Annealing" is placed under the classification of "blacksmith", and will be paid for at 70 cents per hour. Wrecking crane operators are to be paid the mechanics' rate when operating wrecking cranes; formerly crane engineers received the same rate as carmen. While working at wrecks or in charge of wrecked engines, machinists or machinists' helpers are to be paid under the rule governing wrecking service employees, and emergency calls for road work. Under this rule straight time is paid from the time ordered to leave home station until return, for all time worked in recognized straight time hours at home station, and all time working, waiting, or tra-

\*Labour Gazette, April, 1923, page 404.

velling after those hours at time and one-half, provided that if relieved for five hours or more, such relief time shall not be paid for.

Time and one-half is to be paid for all overtime on Sundays (or other regular assigned seventh day off duty) and the following holidays: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, and Christmas Day. Certain classes of employees had previously received time and one-half on only three holidays: viz. New Year's Day, Labour Day, and Christmas Day.

The regular meal-period without pay is reduced to thirty minutes instead of one hour, thus enabling employees to reach home a half-hour earlier; but by special agreements the meal-period may be one hour. All vacancies in preference positions will now be bulletined, employees will therefore have the opportunity to bid in and secure these

positions. In the matter of seniority rights in connection with transfers, it is provided that when through any unusual development it becomes necessary to transfer work from one point to another sufficient men may be transferred carrying their seniority rights with them. The ratio of apprentices is to be maintained in every case in reducing forces; and machinist helper-apprentices are not to be employed in main shops. In connection with leave of absence, a new provision is that "committee will on request be advised of all leave of absence granted employees over ninety days".

In practically all other respects the main agreement remains unchanged. Provision is made that should either the Railway Association of Canada or the employees comprising Division No. 4 desire to revise it further, a written statement containing the proposed changes is to be given to the other party and a conference to be held within thirty days.

---

## PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1923

**T**HE movement in prices during the month was slight, both the family budget in terms of retail prices and the various index numbers of wholesale prices showing little change as compared with the levels for October.

The cost per week of a list of twenty-nine foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.69 at the beginning of November as compared with \$10.65 for October, \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920, \$16.92 for June, 1920 (the peak); and \$7.96 for November, 1914. Eggs were substantially higher in price while there were smaller increases in the prices of cheese, butter, milk, sugar, lard, and prunes. Potatoes showed the lar-

gest decline, but smaller decreases occurred in the prices of beef, mutton, fresh and salt pork, bacon, and evaporated apples. Including the cost of fuel and rent with that of foods, the total budget averaged \$21.19 for November as compared with \$21.16 for October; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.92 for July, 1920 (the peak); and \$14.36 for November, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 238 commodities in 1913 as 100, weighted according to the importance of the commodities, advanced slightly to 153.3 for November as compared with 153.1 for October; 149.6 for

November, 1922; 153.6 for November, 1921; and 256.9 for May, 1920 (the peak).

In the grouping according to chief component material five of the main groups advanced while the remaining three were lower. The greatest increases occurred in the Animals and their Products group and in the Textile group. The increase in the former was due to higher prices for fishery products, furs, fats, and eggs, though there were substantial declines in livestock, meats, hides, and leather. Higher prices for cotton caused the increase in the Textiles group in spite of a sharp decline in silk. The Vegetable Products group was lower because of lower prices for fruits, vegetables, grains, milled products, and sugar. The Non-Metallic Minerals group and the Chemicals group were both slightly lower.

In the grouping according to origin the indexes of domestic farm products, articles of marine origin, and articles of forest origin advanced while that for articles of mineral origin declined.

The index number based upon prices of 271 commodities in 1890-1899 as 100 published by the Department of Labour since 1910 showed little change at 221.7 for November as compared with 221.2 for October; 221.7 for November, 1922; 227.3 for November, 1921; 356.6 for May, 1920; and 137.5 for November, 1914. The most important declines occurred in the prices of fodder, livestock, and meat, cheese, vegetables, flour, sugar, silk, pig iron, linseed oil and turpentine, and smaller declines in grains, gasoline, and in raw furs. The principal advances occurred in the prices of eggs, butter, fruits, glucose raw cotton, and smaller increases in some grains, molasses, tapioca, some metals, spruce, and in red lead. Compared with a year ago the general level was little changed, but the following groups were lower: Animals and Meats, Hides and Leather, Fuel and Lighting,

House Furnishings, Drugs and Chemicals, and the Miscellaneous group.

The index number published by the Department since 1910 has been reconstructed back to January 1919, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913 (LABOUR GAZETTE, June, 1923, pp. 689-695). Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

The special index number (comprising fifty of the more important commodities selected from the 271 in the departmental list) including twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels in 1913 as 100, showed little change at 152.0 for November as compared with 151.9 for October; 152.1 for November, 1922; 147.2 for November, 1921; 211.9 for November, 1920, and 102.5 for November, 1914.

The index of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight

semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, declined slightly to 148 for September as compared with 149 for August and 144 for September, 1922. Goods imported and producers' goods were slightly higher. All the other groups were lower.

Professor Michell's index of wholesale prices based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, advanced to 176.9 for November as compared with 174.2 for October, 168.3 for November, 1922; 225.4 for November, 1920; and 118.4 for No-

vember, 1914. Both foods and manufacturers' goods advanced.

The Canadian Bank of Commerce index of exports fell from 152.07 for October to 148.25 for November, and that for imports from 163.81 to 163.15. The combined index of both imports and exports was down from 157.94 for October to 155.70 for November. Lower prices for agricultural, animal, and metal products were mainly responsible for the decline.

The table of retail prices and rentals shows the prices at the beginning of November of seventy-two staple food-stuffs, groceries, coal, wood and coal oil,

DEPARTMENT OF LABOUR INDEX NUMBERS OF WHOLESALE PRICES BY PRINCIPAL GROUPS OF COMMODITIES FOR NOVEMBER 1923, OCTOBER 1923, NOVEMBER 1922, 1921, 1920, 1919, 1918, 1917, 1916, 1915, 1914 AND 1913.  
(Average Prices 1890-1899=100)

\*December only. †Kind most sold. ‡For electric light see special article.

and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the

grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in

using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices

Beef prices continued to decline. Both sirloin steak and round steak were considerably lower, the former declining from an average of 29.1c per pound in October to 27.8c in November and

the latter from 23.8c in October to 22.6c in November. Rib roast also showed a general decline averaging 21.5c per pound in October and 20.8c in November. Shoulder roast was down from 15.3c per pound in October to 15c in November. Veal prices showed little change in the average, increases in some localities being offset by declines in others. Mutton, leg roast, was down from an average of 28c per pound to 26.6c. The decline was general. Fresh pork also was lower, averaging 27.2c per pound in October and 25.9c in November. Salt pork declined slightly to 25.2c per pound. Bacon declined from an average of 39.3c per pound in October to 38.6c in November. Prices in all provinces averaged lower except in Saskatchewan and Alberta. Boiled ham declined in the average 1c per pound to 59½c. Fresh fish showed little change. Salt herrings were slightly lower while salt cod advanced. Lard was slightly higher, averaging 23.c per pound.

A seasonal advance in eggs continued, fresh eggs averaging 52c per dozen in November as compared with 44.3c in October, 38.3c in September and 32.4c in August and cooking eggs averaging 44c in November, 39.7c in October, and 34c in September. Milk averaged slightly higher. Prices advanced in Halifax, Charlottetown, Fredericton, Bathurst, Quebec, Sherbrooke, London, Windsor, Regina, Prince Albert, Medicine Hat, Nelson, New Westminster, and Vancouver. Butter also was higher in most localities, dairy averaging 40.6c per pound in November as compared with 39.2c in October and creamery averaging 44.9c per pound in November and 44.2c in October. Cheese ad-

vanced slightly in the average from 33.5c per pound to 33.8c.

Bread was practically unchanged. Flour was slightly lower in the average at 4.3c per pound. Rolled oats, rice and tapioca were steady. Canned vegetables were slightly higher, canned tomatoes being up in the average from 17.2c per can to 17.7c in November and canned corn from 15.9c in October to 16.3c in November. Beans were little changed. Onions were down from 6.4c per pound in October to 6c in November. Potatoes again showed a substantial decline averaging \$1.395 per ninety pounds in November, \$1.584 in October and \$1.988 in September. Prices in most localities were lower. Evaporated apples declined from 19.5c in October to 18.9c in November. Prunes also were down from an average of 18.2c per pound in October to 17.7c in November. Raisins and currants were slightly lower. Raspberry jam and canned peaches were little changed. Granulated sugar was again slightly higher, averaging 12.2c per pound in November, 12.1c in October, and 11.3c in September. Tea and coffee were slightly higher. Cream of tartar was up from 66.4c per pound in October to 68.5c in November. Laundry starch was up somewhat, averaging 12.2c per pound.

Anthracite coal averaged \$17.92 per ton in November as compared with \$17.85 in October. Higher prices were reported from Sherbrooke, St. Hyacinthe, Hull, Oshawa, and Niagara Falls. Bituminous coal was practically unchanged at an average of \$11.44 per ton. Hard wood was slightly higher at \$12.70 per cord in November as compared with \$12.58 in October. Higher

prices were reported from Truro, Ottawa, and Cobalt. Soft wood also showed a small advance averaging \$9.53 per cord. Coal oil was slightly lower, averaging 30.1c per gallon.

Rent was slightly lower in Edmonton and Calgary.

#### Wholesale Prices

The following is a summary of the statement on price changes during the month issued by the Dominion Bureau of Statistics:

Grains were downward on the whole, the change in wheat, however, being slight, No. 1 Manitoba Northern at Winnipeg averaging 97 $\frac{1}{4}$ c per bushel as compared with 97 $\frac{3}{4}$ c in October. The belief that export demand for Europe would ultimately improve tended to keep up the market, but increased supplies on the market tended to lower prices. Oats fell from 42c per bushel to 39c. Flour, first patents, declined from \$6.50 per barrel to \$6.30. Raw sugar declined from \$7.42 per hundred to \$7.02 but later the price advanced owing to short supplies in Cuba and reports of a short crop of sugar beets in Europe. Potatoes were down in Toronto from \$1.50 per bag to \$1.40. Apples and lemons declined but oranges advanced. Cattle at Winnipeg were down from \$5.25 per hundred to \$5.00 and at Toronto from \$6.74 to \$6.25. Hogs fell from \$8.75 per hundred to \$8.40. Beef and pork also declined. Hides fell from 11c per pound to 10c and sole leather from 42c per pound to 40c. Fresh eggs advanced from 50c per dozen to 70c and new cheese fell from 26c per pound to 24c. Raw cotton advanced steeply, rising from 30c

per pound at New York to  $34\frac{1}{2}$ c owing to unfavourable crop conditions and damage from the boll weevil. Prices of cotton yarn and sash cord advanced in sympathy with the market for raw cotton. Raw silk fell \$10.20 per pound to \$7.80 at New York, the market being comparatively steady following the speculation due to the earthquake in Japan. Silk thread fell from \$21.00 per

ponnd to \$19.75. Pig iron fell from \$27.00 per ton to \$25.00 but later advanced \$1.00. The copper market began to recover, rising from \$14.85 per hundredweight to \$15.15. Tin and lead also advanced. Gasoline fell from 24c per gallon to 23c. Soda ash, caustic soda, alum, and wood alcohol were lower.

# INDEX NUMBER OF ELECTRIC LIGHT RATES IN CANADA

THE statistics of prices and cost of living compiled and published by the Department of Labour have hitherto not dealt with electric light rates except in the case of the figures published in Volume II of the Report of the Board of Inquiry into the Cost of Living in Canada, 1915. This statement, part of an exhibit compiled by the Statistical Branch of the Department of Labour for the Board, showed the changes in rates in several cities from 1900 to 1913 and included index numbers of electric light rates by provinces and for the Dominion.

In recent months the Department has been requested for information as to changes in electric light rates, on the ground that the family budget of retail prices of food, fuel and light, and rent did not afford information on this item, and that the only commodity included to indicate changes in the cost of lighting was coal oil which has been largely replaced in common use in cities as a source of light for houses.

The statistics of electric light rates mentioned above have, therefore, been brought down to date and the index numbers by provinces, 1900 to 1913, previously published were converted to the basis with rates in 1913 as 100 and continued down to 1923. The accompanying table gives the results. As information for some of the cities was not available, the figures will be revised at a later date when more complete information is obtained.

It appears that electric light rates fell continuously between 1900 and 1923 in the averages for Canada, there being only slight changes in the Maritime Provinces where coal is the chief source of power, but considerable reductions were effected in Quebec and Ontario where water power has been developed greatly as a source of electric current. In the western provinces reductions have been made but not so considerably as in Quebec and Ontario, coal being the chief source of power in some localities and water power in others.

INDEX NUMBER OF ELECTRIC LIGHT RATES IN CANADA, 1900-1923.  
Rates in 1913=100.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

---

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Wholesale prices and cost of living in Canada and the United States continued to display a rising tendency according to the latest information received. Wholesale prices continued to rise in most countries of Europe, including Holland and Switzerland, where falling prices were in evidence during the summer. Prices in Belgium, Sweden and France displayed a tendency to weaken, according to the latest reports. The cost of living continued upwards in most countries of Europe. The latest reports from Asiatic countries were for the summer months in most cases, and the rising tendency was then in evidence.

### Great Britain

**WHOLESALE PRICES.** — The Board of Trade index number of wholesale prices in October showed an increase of 0.4 points or 0.3 per cent over the revised figure for September, 158.0, reaching 158.4 on the base prices in 1913 = 100. Food prices rose by 0.8 per cent, and industrial materials remained at about the same level. Meat and fish fell 3.3 per cent; food, other than cereals, meat

and fish, rose by 6.0 per cent; and cotton rose 2.7 per cent. Other groups showed only slight changes from the previous month's level.

The *Statist* index number (in continuation of Sauerbeck's figures) showed a slight decline at the end of October, being 127.7 as against 127.8 at the end of September. Foodstuffs fell by 2.5 per cent and materials rose by 1.5 per cent. The principal changes in the groups were a fall of 4.1 per cent in animal foods and a rise of 4.3 per cent in minerals.

The *Economist* index number for the end of November showed a very notable increase, the total index reaching 4541, which is, when reduced to the base 100 in 1901-05, 206.4. This level is 5.1 per cent above that of a month previous, and the highest since the end of October, 1921. For the month under review all groups increased, the sharpest rise being one of 14.2 per cent in textiles. There were rises of 1.9 per cent in minerals, of 0.97 per cent in cereals and meat, of 2.6 per cent in "other foods" and of 0.9 per cent in the miscellaneous group.

**COST OF LIVING.** — The index number of the Ministry of Labour of cost of living in Great Britain and Northern Ireland for November 1 was, as stated last month, unchanged from the previous month, remaining at 175. Foods rose one point to 173. Eggs, fish and milk advanced in price, while bacon, bread, potatoes, meat and flour were slightly cheaper. The index number of

foods was 5 points or 2.8 per cent lower than one year previous, and the cost of living was also 5 points, or nearly 2.8 per cent lower. At December 1, the index number was 177, foods having risen 3 points to 176. Other elements of the budget showed no change during the month of November.

### Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry and

Labour, after rising for three successive months, fell 15 points or 2.8 per cent during September to 514 on the base prices in April, 1914 = 100. There were the following changes in the more important groups: declines of 2.5 per cent in foods; of 4.4 per cent in metal products; of 2.9 per cent in clay products; of 1 per cent in chemical products; of 3.6 per cent in textile products. Construction materials showed a very slight decrease. Hides and leather goods and fuels were the only

groups to show increases, and in both cases the changes were very slight.

France

WHOLESALE PRICES.—The index number of the *Statistique Générale* fell slightly in October after its sharp rise in the two previous months, reaching 486.1, of 0.7 per cent below the level of the previous month. Foods fell 3.2 per cent with a sharp drop in sugar, coffee and

cocoa, a slight decline in animal foods and a rise in vegetable foods. Materials rose 1.1 per cent with increases in minerals and metals and in textiles, and a decline in the miscellaneous group.

COST OF LIVING. — The index number of the cost of living at Paris, published by the Commission of Studies on the Cost of Living dropped 3 points or 1 per cent in the third quarter of 1923, standing at 331 on the base 100 in 1914. Foods

### Germany

WHOLESALE PRICES. — The official index number of the Federal Statistical Office, on the base 1913-14 = 1, was for October (monthly average) 71000 millions. The weekly figure at Novem-

ber 6, was 129 billions and at November 13, was 265 billions.

As statistics of wholesale prices and the cost of living were available only to November 12, the influence of the new currency unit, the rentenmark, could not be seen. The rentenmark (officially equal to an undepreciated gold mark) was put into circulation to the extent of 340,000,000 between November 15 and 23.

and from January, 1922, 100 quotations.

**COST OF LIVING.**—The monthly index number of the cost of living, on the base 1913-14 = 1, was 15 millions in September and rose to 3,657 millions in October. Foods rose from 17.3 millions in September to 4,301 millions in October; heat and light from 23.3 millions to 5,715; rentals, from 0.3 millions (300,000) to 54 millions; and clothing from 26.5 millions to 6,160 millions. The weekly index number for 29 localities

reached 218,500,000,000 (or 218.5 milliards) on November 12.

### India

**COST OF LIVING.**—The official index number compiled by the Bombay Labour Office showed a decrease for October to two points below the September level, reaching 152, on the base 100 in July, 1914. In foods, cereals showed a decline of one point, pulses

showed no change and other foods declined 6 points, so that all foods fell 2 points to 147. Clothing rose 5 points to 211 and fuel and lighting and house rent remained unchanged at 160 and 165 respectively.

### United States

WHOLESALE PRICES.—The index number of the Federal Reserve Board showed no change in October from the September level. Goods produced fell one point, goods imported rose 6 points and goods exported rose 5 points. Raw materials and consumers' goods showed no change, while producers' goods dropped 5 points.

The index number of the Bureau of Labour Statistics showed a slight downward tendency in October reaching 153 as compared with 154 for September. The decline was chiefly due to declines in fuels and metals, decreases being shown in bituminous coal, coke, crude oil and gasoline, and in pig iron, steel billets, copper and lead. In the cloths and clothing group there was a slight decrease, with falling prices for raw silk and rising prices for cotton goods. There was also a decrease in the miscellaneous group. Foods and chemicals and drugs rose slightly in price and building materials and house furnishing goods showed no change.

## JUDGMENT RESPECTING LEGALITY OF INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.

IN the September issue of the LABOUR GAZETTE on page 986 reference was made to a decision of Mr. Justice Orde in the High Court Division of the Supreme Court of Ontario in which was involved the question of the validity of the Industrial Disputes Investigation Act. By this decision an interim injunction was issued to restrain a Board of Conciliation appointed under the Act from exercising any of their powers under Section 38 of the Act with respect to the Toronto Electric Commission. Application was subsequently made by the Toronto Electric Commissioners for the issuing of a permanent injunction against the Board. The case (*Toronto Electric Commissioners versus Snider*) was heard by Mr. Justice Mowat, who delivered his judgment on December 15. The Act was found by him to be within the powers of the Dominion Parliament, and the application for a permanent injunction was, therefore, refused. The case was referred to one of the appellate divisions of the High Court for determination.

The text of the judgment was as follows:

This action is for a declaration that the defendants have no right to act as a Board of Conciliation and Investigation in respect of an alleged dispute between the plaintiffs and their employees, and is brought in the main to dispute the constitutional right of the parliament of Canada to pass the Industrial Disputes Investigation Act (1907) generally, and in particular as it affects the relations between the Toronto Electric Commissioners, who are entrusted by statutes of the province of Ontario with the powers and duties of producing and controlling electrical power, and their employees.

The Act in question is challenged upon the ground that it interferes with the remitted

powers of the Province under sec. 92 of the British North America Act, as follows: sub-section 8 Municipal institutions in the Province; sub-section 13. Property and civil rights in the Province; sub-section 16, Generally all matters of a merely local or private nature in the Province.

The scheme of the Industrial Disputes Investigation Act is to compel the parties to a threatened strike or lockout to meet together in conference in which both employer and employees may state their cases and differences, with a view that they may be by conciliatory efforts, induced to come to a fair and amicable settlement of the dispute, so as to remove tense and disrupted relations, failing which the Board is to make a report giving its information to the public. And it is empowered for this purpose to interfere with contracts in existence between the hirer and the hired, freedom of action while the discussions and proceedings are taking place, and incidentally to enter upon and inspect works and examine books and reports, so that all facts and circumstances may be disclosed.

It may be conceded that the obligatory character of the act in these respects is an invasion of the field of "property and civil rights," but it is urged on behalf of the Attorney-General for Canada and the defendants, the members of the Board of Conciliation appointed under the Act, that such requirements are necessary and that the effective or possible determination of industrial strife gives the Dominion Parliament power so to trench upon the subjects mentioned in sub-sections 8, 13 and 16 of section 92, in order that a law necessary for "the peace, order and good government of Canada" may be effectively administered and enforced.

Having come to the conclusion that the constitutional question raised is the all important one, I do not here deal with the evidence directed to that feature of the case which deals with the procedure leading up to the appointment of the Board of Conciliation which was made and the propriety of its appointment. In

a general way I find that the requirements of the statute have been complied with.

I therefore pass on to discuss the constitutional point raised.

The question of industrial strife, together with its ramifications and the growth of labour unions, is vastly different from the condition existing at the time of the passing of the British North America Act in 1867, and the silence of the Act regarding "labour" and the absence of the specific allocation of that subject to the Dominion or the Provinces is thus accounted for. But it may be observed that the question of labour has, for more than twenty years, been appropriated by the Dominion Parliament and Government. There is a Department of Labour, with a Minister of Labour in charge; periodical publications dealing with labour questions, the labour market, the current cost of living, and the employment of the Military Forces of Canada in the protection of property and the public safety where violent eruptions have occurred or may. This department has, by common consent of the provinces during this long period, been the principal administrative means of dealing with the question of eruptive industrial strife; and, while the fact of acquiescence does not settle a constitutional point of law, and if there is no authority for the taking over of labour problems by the Dominion, yet a declaration of the court that all such administrative actions are to cease, and inferentially that all the governments and their law officers have erred, or slept, should not be arrived at unless the law is clear.

Canada's constitutional problems have all found their way to the Judicial Committee of the Privy Council, whose members have taken enormous pains from period to period, in their elucidation, and it is by the views of that tribunal that we are to be guided.

The allocation by the British North America Act of subjects to Dominion or provinces by general heads or titles, means overlapping and impingement and in *Citizens and Queen Insurance Companies v. Parsons* (1881) 7 A.C. 96, Sir Montague Smith says, (p. 107):

"The scheme of this legislation, as expressed in the first branch of section 91 is to give to

the Dominion Parliament authority to make laws for the good government of Canada in all matters not coming within the classes of subjects assigned exclusively to the provincial legislature. . .

And at pages 108, 109:—

"It is the duty of the courts, however difficult it may be, to ascertain in what degree, and to what extent, authority to deal with matters falling within these classes of subjects exists in each legislature, and to define in each case before them the limits of their respective powers. It could not have been the intention that a conflict should exist; and, in order to prevent such a result, the two sections must be read together, and the language of one interpreted and where necessary, modified, by that of the other. In this way it may in most cases be found possible to arrive at a reasonable and practical construction of the language of the sections so as to reconcile the respective powers they contain and give effect to all of them."

And per Lord Dunedin in *Grand Trunk Railway Company v. Attorney-General of Canada* (1907) A.C. 65 ("Contracting Out" case), at page 68:—

"First... there can be a domain in which provincial and dominion legislation may overlap, in which case neither legislation will be *ultra vires* if the field is clear; and secondly, that if the field is not clear, and in such a domain the two legislations meet, then the dominion legislation must prevail.

In *John Deere Plow Company* (1915) v. *Wharton* (1915) A.C. 330, Viscount Haldane said, (pages 338, 339):—

"The language of these sections (91 and 92) and of the various heads which they contain obviously cannot be construed as having been intended to embody the exact disjunction of a perfect logical scheme. The draftsman had to work on the terms of a political agreement, terms which were mainly to be sought for in the resolutions passed at Quebec in October, 1864. To these resolutions and the sections founded on them, the remark applies. . . If there is at points obscurity in language, this may be taken to be due, not to un-

certainly about general principles, but to that difficulty in obtaining ready agreement about phrases which attends the drafting of legislative measures by large assemblages. It may be added that the form in which provisions in terms overlapping each other have been placed side by side shows that those who passed the Confederation Act intended to leave the working out and interpretation of those provisions to practice and to judicial decisions... In discharging the difficult duty of arriving at reasonable and practical construction of the language of the sections so as to reconcile the respective powers they contain and give effect to them all, it is the wise course to decide each case which arises without entering more largely upon an interpretation of the Statute than is necessary for the decision of the particular question in hand. The wisdom of adhering to this ruling appears . . . to be of special importance. When putting a construction on the scope of the words 'civil rights' in particular cases an abstract logical definition of their scope is not only, having regard to the text of the 91st and 92nd sections of the Act, impracticable but is certain, if attempted, to cause embarrassment and possibly injustice in future cases. It must be borne in mind in construing the two sections that matters which in a special aspect and for a particular purpose may fall within one of them, may in a different aspect and for a different purpose fall within the other. In such cases the nature and scope of the legislative domain of the Dominion or Province, as the case "may be, have to be examined with reference to the actual facts if it is to be possible to determine under which set of powers it falls in substance and in reality".

It appears to me that "labour" legislation such as the Industrial Disputes Investigation Act is one of national concern. It is important that a close touch should be kept of the movements and variations of industrial strife and that this can best be done, as such strife existed in 1907 and until the present time, by the federal government. A general strike in Winnipeg in 1919 was only brought to an end through the voluntary efforts of the non-industrial citizens to break it, and to prevent the misery and underfeeding of children, which seemed likely to ensue. All important labour unions in Canada were sympathetically affected

by it from ocean to ocean, and if it had spread, as at one time feared, ominous conditions would have ensued to trade and stable industry. In such a case provincial lines are obliterated and the provinces not having the means of free and instant communication with each other, or for concert, could ill avert dominion-wide trouble. The simple local strikes which alone could have been in contemplation of the Fathers in 1864 and 1867, have given place to those of brotherhoods composed in some instances of hundreds of thousands, and dominion-wide in their operations and probably beyond the resources of each province to deal with. As was said by Lord Watson, in stating the opinion of the judicial committee in *Attorney-General for Ontario v. Attorney-General for the Dominion*, 1896 A.C. 348, 361:—

"Some matters in their origin local and provincial might attain such dimensions as to affect the body politic of the Dominion, and to justify the Canadian parliament in passing laws for their regulation or abolition in the interests of the Dominion, but great caution must be observed in distinguishing between that which is local and provincial . . . and that which has ceased to be merely local or provincial and has become a matter of national concern, in such sense as to bring it within the jurisdiction of the Parliament of Canada".

In *Russell vs. The Queen* (1882) 7, A.C. 829 it was held that the restriction of intemperance was a matter of public order and safety although it infringed on property and civil rights. And this case, although the Attorneys-General were not represented, has been expressly reaffirmed in statements by the committee.

If such an ill as occasional overdrinking is subject to dominion legislation it must follow that the prevention of strikes by conciliation which conceivably might occasion the starving of the people should also be.

In the last case on the subject, it was held that regulation of the price of newsprint paper, upon which soothing and uninterrupted information might be written to quiet the nerves of the people racked by the Great War, but which was over when the regulation was passed, was within the powers of the Dominion, the Viscount Haldane saying: "No authority

other than the central government is in a position to deal with a problem which is essentially one of statesmanship." *Fort Frances Pulp and Paper Co. v. Manitoba Free Press Co.*, 1923, A.D. 695, 706.

The elements of "municipal affairs" and "matters of a merely local and private nature" come within the same reasoning.

I note that Mr. Justice Orde in this very case, reported 25 O.W.N. 64 heard a motion for an interim injunction upon material which substantially raised the same issue as that raised by the evidence at the trial before me and gave a considered judgment reasoned with his usual clearness, coming to a conclusion differ-

ing from that to be gathered from what I have here said.

The Ontario Judicature Act, section 32, declares that a judge cannot disregard or depart from a prior known decision of any other judge of co-ordinate authority on any point of law without his concurrence, and as I have not that concurrence, although I have no reason to think it would not be given, I must say with reluctance, but to be formally correct, that I deem his decision to be wrong and the case of sufficient importance to warrant me in referring it, with the record and evidence before me to one of the appellate divisions together with the costs of action; and such reference is therefore made.

---

## RECENT LEGAL DECISION AFFECTING LABOUR

### A New Brunswick employer may decline to come under jurisdiction of Workmen's Compensation Board

---

THE following legal decision has reference to a case concerning the jurisdiction of the Workmen's Compensation Board of New Brunswick. In the article immediately preceding is given the text of a judgment recently delivered at Toronto respecting the legality of the Industrial Disputes Investigation Act, 1907.

The Bathurst Company, Limited, of Bathurst, N.B., which carries on a business of logging, lumbering, etc., refused to furnish to the Workmen's Compensation Board of New Brunswick any information with reference to their payroll for 1922 as directed by Section 48 of the Workmen's Compensation Act.

The Company claimed that it had informed the Board that it intended, under the provisions of Section 61 of the

Act, to become an industry within Part 11 of the Act. The Board notified all the injured employees of the Company that they would have to look for compensation to the Company personally and not to the Board. During 1922, in accordance with Part II of the Act the Company paid as much compensation to all their injured employees as they would have received had the Company been under the jurisdiction of the Board.

In January, 1922, the Workmen's Compensation Board levied an assessment upon all the industries included in Part I of the Act, and in October of that year it attempted to apply this assessment to a pretended payroll of the Company, which the Board had estimated, and which, the Company claimed,

was largely in excess of the actual payroll. A little later the Board notified the Company that unless this assessment was paid within ten days it would, under the powers conferred upon it by Section 66 of the Act, issue its certificate and sign final judgment against it, notwithstanding the Company's claim that it was not at any time in 1922 an industry within the scope of Part I of the Act.

The Company then applied in the Chancery Division of the Supreme Court of the province for a decree declaring that all assessments made by the Board against the Company for the year 1922 were illegal and void, and that the Company was not liable to assessments made by the Board under the Act. It also asked that a perpetual injunction be ordered to restrain the Board from issuing a certificate to the Registrar of the Supreme Court or any Court in respect to assessment or from signing any judgment against the Company in respect of such assessment.

It was held by the Court that when an employer neglects or refuses to furnish to the Board any information as to his payroll, etc., he automatically passes without Part I of the Act and beyond the jurisdiction of the Board, and that before an assessment can be made it is the duty of the Board to require the employer to furnish such information as will enable it to determine whether the employer is or is not within the scope of Part I of the Act. In this case the Board did not do so, but proceeded arbitrarily to treat the Company as an industry under Part I of the Act.

For these reasons the injunction against the Board was made permanent as requested by the plaintiff.

The Board appealed against this decision to the Supreme Court of New Brunswick, but the judgment of the Chancery Court was sustained.

(*New Brunswick — Bathurst Company Limited vs. Workmen's Compensation Board*).
